Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Ian Lennox

Leonard, Freja – Tuesday, 18 May 2021 – 19:28:02

Subject	Powerful objection to the Imperial 2021-2025 EP187 Work Program EMP
From	Freja Leonard
Sent	18/05/2021 7:28:02 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Freja Leonard

Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Jenny Lewis

Liebig, Gerard – Wednesday, 19 May 2021 – 22:39:45

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Gerard Liebig
Sent	19/05/2021 10:39:45 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Gerard Liebig

Lillie, Samantha – Wednesday, 12 May 2021 – 06:25:22

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Samantha Lillie
Sent	12/05/2021 6:25:22 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance. I am also concerned about the impact of such clearing on NT emissions.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity in the NT. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk. I am also particularly concerned about interconnected water flow rates in the event of a spill or well failure resulting in contamination. Water is a precious resource in the NT. I am concerned about plans to use water once aquifer allotments are exhausted. Territorians deserve to know more.

This fracking work schedule also coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk. I am also concerned this lack of publicly available detail on plans to keep communities safe from Covid-19.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight. This is especially concerning given the rush to frack as many wells as possible, as quickly as possible.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment. I contest the benefits of this project on the basis it lacks financial, ecological and environmental merit, and puts future Territorians on a dangerously uninhabitable pathway .

Thank you.

Samantha

Minister for Renewables and Energy; Minister for Infrastructure, Planning and Logistics; Minister for Environment; Minister for Water Security; Minister for Climate Change; Minister for Essential Services

Department of Environment, Parks and Water Security

Dear Minister Lawlor and Department,

Imperial Oil and Gas EP 187 Fracking Compliance Objection

Environmental Management Plan for Imperial Oil and Gas project 2021-2025 EP 187 Program (Imperial EMP)

I write on behalf of Lock the Gate Alliance in reference to Imperial Oil & Gas' Environmental Management Plan for project 2021-2025 EP 187 Program (Imperial EMP).

Lock the Gate welcomes the opportunity to make a submission on this EMP.

By way of background, Lock the Gate Alliance is a national grassroots organisation made up of over 150,000 individuals and over 250 local groups who are concerned about unsafe or inappropriate mining. Lock the Gate works across the NT and is committed to advocating for environmental and community health, and the productivity of locally sustainable economies.

We welcome the Community Bulletin #41 announcement in relation to updated scope of work into the Social, Cultural and Economic SREBA studies as a key recommendation from the Scientific Inquiry into Hydraulic Fracturing in the Northern Territory. Without more details forthcoming, we wish to iterate our concerns that remunerated consultants are appropriately independent of oil & gas sector interests.

We have a summary of key concerns applicable to this EMP. Although they are not exhaustive, we encourage the lens of this submission to be applied holistically to the full assessment of this EMP. It is our strong viewpoint that the magnitude of Imperial Oil & Gas's proposed works, and potential use of Federal funding to implement this program merits full and proper consideration under the Federal and Northern Territory jurisdictions.

We are concerned that key public interest details of the EMP are either deficient in the due diligence of information provided by Imperial Oil & Gas or have not been made publicly accessible. We recommend a full environmental impact assessment process to investigate the cumulative impact of the complex and highly concentrated scope of work in the proposed 2021-2025 program of work.

Furthermore, we reject the EMP on the basis the EMP does not meet a requirement for the Environment Minister to be reasonably satisfied that the approval criteria in the Petroleum (Environment) Regulations 2016 (PER) has been met.

[Type here]

Please find detailed components of our concerns in attached documentation. The document is written in three parts. The first section addresses due process. The second section addresses overall concerns with recommendations for review and implementation. A third section includes supplementary information. This is included as Attachment A.

We wish to acknowledge that this document, with inclusion of Attachment A is extensive, but feel the length is required due to the concerns at hand.

Your sincerely,

Samantha Lillie
c/o Lock the Gate Alliance

**Failure of Due Process in the Environmental Management Plan for Imperial Oil and Gas project 2021-2025 EP 187 Program (Imperial EMP)
(Summary)**

Petroleum (Environment) Regulations (PER), 2016 (Part 2, Division 2, Clause 9):

- (1) The approval criteria for an environment management plan are that the plan must: (a) include all the information required by Schedule 1; and
(b) be appropriate for the nature and scale of the regulated activity to which the plan relates; and
(c) demonstrate that the activity will be carried out in a manner by which the environmental impacts and environmental risks of the activity will be reduced to a level that is: (i) as low as reasonably practicable; and
(ii) acceptable; and
(d) include an Authority Certificate in relation to the land on which the activity will be carried out.*

Clause 11(2) of the PER requires the Environment Minister to be “reasonably satisfied that the plan meets the approval criteria” before approving the plan.

With regards to Petroleum (Environment) Regulations, 2016, Schedule 1, we draw your attention to Petroleum (Environment) Regulations, 2016 (Schedule 1, Clause 3 (1), (2), Clause 4A(d) & (H) in regards to the EMP’s failure to include assessment of indirect and cumulative impacts of proposed activities and satisfactorily address use of Hydraulic Fracturing Chemicals, specifically:

Schedule 1, Clause 3 requires the following information to be included in the EMP:

- (1) A plan must include:*
*(a) details of all environmental impacts and environmental risks of the regulated activity described in the plan and an assessment of those impacts and risks; and
(b) a description of the process used to assess the environmental impacts and environmental risks.*
(2) The assessment mentioned in subclause (1)(a) must be of:
*(a) all the environmental impacts and environmental risks arising **directly or indirectly** from:*
*(i) all aspects of the regulated activity; and
(ii) potential emergency conditions, whether resulting from an incident or any other reason; and
(b) the **cumulative effects** of those impacts and risks when considered with each other and in conjunction with any other activities or events that occurred or may occur in or near the permit area for the regulated activity.*

[Type here]

Schedule 1, Clause 4A(d) & (H) require the following information to be included in the EMP:

If the activity is hydraulic fracturing, a plan must specify the following information in relation to any chemical or other substance that may be in, or added to, any treatment fluids to be used in the course of the activity:

(d) the purpose of the chemical or other substance;

(h) the requirements in relation to the management of the chemical or other substance of the prescribed chemical legislation.

For noting:

Well Operations Management Plan (WOMP)

The main EMP document states: "Parallel to the EMP, Imperial is compiling a Well Operations Management Plan (WOMP) to cover the Drilling, Hydraulic Fracture (HF), and Extended Production Test (EPT) activities to be carried out under this EMP. The WOMP will be submitted to DITT for approval before those activities are carried out."(page 65)

In B.3 of the Code of Practice: Onshore Petroleum Activities in the Northern Territory, requirements for the WOMP are set out as follows:

"Interest holders shall have a well operations management plan (WOMP) approved for regulated well activities, as required by the Schedule. WOMPs must address the mandatory requirements set out in this Code."

From the EMP it is clear that the WOMP has not yet been approved by DITT. We note that the PER does not require the WOMP to be provided as part of the EMP. However, it may be open to argue that the Minister cannot not reasonably be satisfied that the EMP demonstrates that the risks and impacts associated with well integrity loss have been reduced to ALARP and acceptable levels without reference to the WOMP, and therefore that the Minister cannot be satisfied that approval criterion in cl 9(1)(c) of the PER has been met.

Authority Certificate

The approval criterion in Clause 9(1)(d) of the PER requires the EMP to include an Authority Certificate in relation to the land on which the activity will be carried out.

We note that the EMP does include an authority certificate. Therefore, it is open to argue that the Minister should not approve the EMP until an authority certificate is provided. 16. We also note that the EMP is not consistent when referring to the status of the Authority Certificate:

- a. Page 13 of the EMP states "Imperial has applied for an AAPA certificate and will supply it to DEPWS when received."
- b. Page 32 of the EMP states "AAPA certificates for all exploration activities have been obtained for all activities proposed in this EMP."

[Type here]

- c. Page 37 of the EMP states “AAPA certificate: TBA”
- d. Page 82 of the EMP states at 4.4.1 “An AAPA certificate will be in place before works are carried out under his [sic] EMP.”
- e. Page 87 of the EMP states “The areas proposed to be disturbed have been surveyed for sacred sites and cultural heritage significance, and an AAPA certificate is in place.”

A copy of the relevant Authority Certificate was not included in the EMP.

Cultural heritage impacts

The approval criteria at cl 9(1)(c) of the PER requires that the EMP "demonstrate that the activity will be carried out in a manner by which the environmental impacts and environmental risks of the activity will be reduced to a level that is: (i) as low as reasonably practicable; and (ii) acceptable."

Environment is not defined in the PER but the *Petroleum Act 1984* defines the term by reference to the *Environment Protection Act 2019*. In section 6 of that Act, “environment means all aspects of the surroundings of humans including physical, biological, economic, ***cultural and social aspects***.”

Therefore, to meet the approval criteria in cl 9(1)(c) of the PER, the EMP is required to demonstrate that impacts and risks to Aboriginal cultural heritage are ALARP and acceptable.

In our view, in the absence of the Authority Certificate, it is open to argue that the Minister could not be satisfied that the approval criteria in cl 9(1)(c) of the PER have been met in respect to impacts and risks to Aboriginal cultural heritage. In this regard, however, we note that the EMP does include an archaeological survey at Appendix 01.01, and references other anthropological surveys conducted at pages 13 and 82 of the EMP.

**Environmental Management Plan for Imperial Oil and Gas project 2021-2025 EP 187
Program (Imperial EMP)**

Overall concerns and recommendations for EMP Review

**RE: Objection and comments with relation to Imperial Oil & Gas Pty Ltd 2021-2025 EP187
Work Program Environment Management Plan (EMP)**

We reject the EMP on the basis it does not meet a requirement for the Environment Minister to be reasonably satisfied that the approval criteria in the Petroleum (Environment) Regulations 2016 (PER) have been met and we recommend the EMP is refused and a full environment impact assessment process is conducted to investigate the cumulative impact of the complex and highly concentrated scope of work proposed.

Social and Cultural Concerns

AAPA certificate

We draw your attention to the Final Report of the Scientific Inquiry into Hydraulic Fracturing in the Northern Territory (Pepper Enquiry Report), most specifically

Recommendation 11.1 That gas companies be required to obtain an Authority Certificate prior to the grant of any exploration and production approvals.

We note that Imperial Oil and Gas has applied for, but apparently not received, a certificate of approval from the Aboriginal Areas Protection Authority to undertake work in the proscribed areas. Of concern is that archaeological survey work does not cover the full four-year program scope of work proposed by EMP, or its complexity - and that initial survey work is confined to proscribed 2021 activities only. The report notes that a full systematic survey has not yet been completed and that initial survey studies 'inadvertently discovered some of the most significant archaeological sites in the region' and that these sites were 'found by chance.'¹

In terms of stakeholder engagement, we also note the EMP has not referenced publicly documented concerns from a family directly responsible for maintaining a dreaming site within 30 kilometres of Carpenteria 1, the locality of which sits above the Cambrian limestone aquifer². The Cambrian limestone aquifer has previously been documented by CSIRO for being at risk of contamination.³

¹ [Imperial OG 2021-2023 EP187 Program -appendices \(nt.gov.au\)](#), p68

"Two rockshelters, Balbirini 1 and 2 were located during mobilisation. Both are in EP187, but these are outside of the proposed 2021 work area programme. These sites have a high archaeological significance as they may be used to date the initial Aboriginal occupation in the Carpentaria region' 'Well sites CARP AA and CARP AB north of the highway will require a systematic archaeological survey should their placement area, or placement zone, increase from 300m to 1.5km radii. Small creeks and drainage channels, that may contain archaeological material, intersect these sites

² Fracking on Country in the NT by Rick Morton (Saturday Paper), December 19, 2020 – January 22, 2021, No 332 [Fracking on Country in the NT | The Saturday Paper](#)

³ <https://www.csiro.au/en/News/News-releases/2021/Tiny-new-species-discovered-as-scientists-outback-fishing-trip-bags-exotic-catch> (p11-21). For noting: [Why Frack Wastewater Injected Underground Doesn't Always Stay There - The Allegheny Front](#)

Specific details of the proposed vertical and horizontal drilling depths and locations for the entire project need further detail for the conditions of the project - including consideration for cultural safety - to satisfy grant of an AAPA certificate. Doing so will allow a more satisfactory determination that can better determine potential discrepancies between the EMP project's description and approved activities of a potential AAPA certificate so that they can be mitigated.

Recommendations:

1. That the EP187 EMP is rejected given the failure of Imperial Oil and Gas to implement a full archeological survey
2. That the EP187 EMP is refused given that the full requirements of an AAPA certificate are not satisfied.

FPIC and Social License

RMIT University released a study on 17 March 2021 regarding public reports that mining companies flout human rights conventions when negotiating with Indigenous Australians, drawing attention to the activities of three major mining projects including Origin Energy (gas fracturing in the Beetaloo) and Glencore (McArthur River Mine).⁴ Their recommendations are included at **Attachment A (1)** noting the following.

“The backlash following Rio Tinto’s decision to destroy the Juukan caves in Western Australia has ...also demonstrated - as in the case of Bravus, Origin, and Glencore - that companies need to start adhering to international laws on the rights of Indigenous Peoples, as well as business and human rights frameworks” (First Peoples and Land Justice Issues in Australia: Addressing Deficits in Corporate Responsibility, page 4)

We are concerned that consultation has not been adequate to provide opportunities for Free Proper and Informed Consent for all those traditional owners that hold interconnected cultural and familial obligations for the extensive Imperial Oil and Gas holdings interlinked with EP187 - including, for example, EP180, EP181, EP182, EP183, EP184 and EP188.

Concerns about consultation in relation to oil and gas projects has been raised by Traditional Owners recently in the general McArthur area⁵. This is significant, noting the challenge of translating highly technical information about fracking into local languages, is a significant barrier to Free Proper and Informed Consent (FPIC).⁵⁶

We note with concern, that Imperial Oil & Gas has previously submitted an application to commence exploration drilling in the wet season.

Recommendations:

3. That EP187 EMP is refused unless and until stakeholder issues are resolved as per **Schedule 1, Part 3, (9) (1d) of the Petroleum Environment Regulations (2016)**.

⁴<https://www.sbs.com.au/news/mining-companies-flout-human-rights-conventions-when-negotiating-with-indigenous-australians-study-finds>

⁵ NLC meetings held at short notice [Beetaloo Aboriginal traditional owners fear gas fracking threat to sacred water sites - The World Today - ABC Radio](#) and [Fracking on Country in the NT | The Saturday Paper](#) (full transcript as Attachment A)

4. That Imperial Oil & Gas make full disclosure of consultation and two-way communication with communities, in particular, demonstrate how it established FPIC from Traditional Owners and communities in relation to the full suite of its proposed fracking project and surrounding titles.
5. That Imperial Oil & Gas engage comprehensively and directly with Traditional Owners to settle the matter of whether there is FPIC for fracking to occur under its current petroleum leases.⁶
6. The current EMP is withdrawn until full stakeholder consultation is undertaken and completed.

General consultation and notification

In regard to the Pepper Enquiry Report:

Recommendation 14.5: That the Minister must take into account comments received during the public consultation period when assessing a draft EMP.

We believe that 28 days is an inappropriate time frame for the public to respond to such a large project and express concern about an NTG decision to remove paper-based notification from local newspapers and the communities that rely on them for information.

Further, we note that it has been reported today that the online “Have Your Say” notification which was supposed to replace newspaper advertisements has not functioned to inform those who have registered⁷, and as such we argue very strongly that proper consultation has demonstrably NOT occurred. Therefore, we argue that the consultation has been completely inadequate, and that the Minister cannot make a decision on the EMP in that context.

We are likewise concerned at the timing of this project’s proposal, and its adverse social impacts on community, particularly in relation to ongoing issues and concern in regard to Glencore’s McArthur River Mine and community participation in the Federal Juukan Gorge Inquiry.

Recommendations:

7. That the EMP is re-advertised for consultation and that all people who have signed up for the notification on the Have Your Say website are informed and given a proper opportunity to review and comment on it.
8. That assessment of this project is deferred until full resolution of community matters relating to McArthur River Mine and the Juukan Gorge Inquiry are resolved⁸.

Flora and Fauna

The absence of baseline data by way of SREBA⁹ in relation to EP187 and surrounding areas is a significant concern. With reference to the Pepper Enquiry Report:

⁶ 2021-FPIC-ThirdDraft-SinglePages-Compressed (4).pdf First Peoples and Land Justice Issues in Australia, Addressing Deficits in Corporate Accountability

⁷ [Concern about lack of transparency around new fracking proposal](#)

⁸ [Northern Territory traditional owners likely to testify at Juukan Gorge inquiry \(sbs.com.au\)](#)

⁹ SREBA: Strategic Regional Environmental Baseline Assessment. Reference: Scientific Inquiry into Hydraulic Fracturing in the Northern Territory (Summary of the Final Report), p29

“The Panel recognised that existing Northern Territory mapping datasets cannot be relied upon and recommended that significant *“on-ground work will therefore be needed to comprehensively map the occurrence and distribution of terrestrial biodiversity assets of regions likely to be affected by the extraction of any onshore shale gas.”* (Chapter 15, p. 448)

The SREBA also identified the effects of this knowledge gap on our ability to properly assess risks (p. 8):

“Limited information on biodiversity assets and their location impedes the ability to properly assess the risks of any unconventional gas development (especially cumulative impacts over large areas) and reduces the ability to plan the location of infrastructure to minimise the risk of unacceptable impacts to aquatic and terrestrial biota.”¹⁰

Furthermore:

Recommendation 14.19 That prior to granting any further exploration approvals, cl 3(2)(b) of Sch 1 of the Petroleum Environment Regulations be amended to read as follows: “3(2)(b) [delete ‘as far as practicable’] any cumulative effects of those impacts and risks when considered both together and in conjunction with other events, activities or industries, including any other petroleum activities and extractive industries, that have occurred or that may occur in or near the location of the activity or in or near the region, area or play where the regulated activity is located”.¹¹

We express concern that terrestrial data provided in the EMP does not address knowledge gaps identified in the Pepper Enquiry Report, and that the EMP is therefore insufficient to warrant approval for the large-scale schedule of work proposed by Imperial Oil & Gas. A summary of these concerns relating to cumulative impacts, survey methodology, vegetation communities, threatened fauna and flora, impact assessment and mitigation (wastewater, weeds, noise, light and vibration) and as well as effect on feral predators is included at **Attachment A (2)**.

To note:

- The EMP Mitigation strategies do not reflect best practice principles¹²
- The EMP downplays risk to flora and fauna, particularly in the event of incremental variances to vegetation clearances ‘on the ground’;
- EMP data on the cumulative impact of land clearance segmentation within the region is insufficient and requires broader and due consideration;
- The EMP contravenes recommendation 7.12 of the Pepper Enquiry Report that ‘enclosed tanks must be used to hold all wastewater’;

¹⁰ Imperial Review by Dr Renata Bali, p9

¹¹ Scientific Inquiry into Hydraulic Fracturing in the Northern Territory (Summary of the Final Report) p52

¹² Imperial Review by Dr Renata Bali, p15

- EMP calculations of anywhere between 24-56 open air wastewater evaporation tanks poses unacceptable risk to biodiversity¹³;
- The EMP revised desktop and field survey information falls short in due diligence of a full systematic survey of the region. This is highly significant due to Imperial Oil & Gas holdings of several tenements directly adjacent to and ecologically interlinked with EP187 - these being for example, EP180, EP181, EP182, EP183, EP184 and EP188;
- Commitment to a broader regional survey of the region's environment is likely to indicate a level of environmental significance requiring referral under NT EP Act and also under the Federal EPBC Act 1999.

Recommendations:

9. That the EMP in its current form is rejected
10. The EMP be referred to the NT EPA for a full Environmental Impact Assessment under Section 50 of the NT EPA Act.
11. That due diligence measures are applied to undertake a full and comprehensive systematic environmental survey, with respect to all cumulative impacts on fauna and flora;
12. That the Environmental Impact Assessment examines nearby exploration permits in the vicinity of EP187 - these being EP180, EP181, EP182, EP183, EP184 and EP188 as per Schedule 1, Part 1, (3) (2b) of the Petroleum Environment Regulations (2016).
13. The NT Government/Imperial also refers the project to the Federal Government under the Environment Protection and Biodiversity Conservation Act 1999 due to the scale of the impacts and the cumulative impacts in relation to biodiversity, heritage and other matters

Water

We express concern that terrestrial data provided in the EMP does not address knowledge gaps identified in the Pepper Enquiry Report, and that the publicly available documents provided in the EMP are therefore insufficient to warrant its approval. With response to the EMP, we draw attention to the following recommendations from the Pepper Enquiry Report below with addition information included at **Attachment A (3)**:

Recommendation 7.2 That the Government introduces a charge on water for all onshore shale gas activities

Recommendation 7.3 That the Australian Government amends the EPBC Act to apply the 'water trigger' to onshore shale gas development

¹³ Calculations from EMP: 4 wellpads per well = minimum 28 wellpads, (1 to 2 tanks per wellpad = anything between 22-56 open evaporation/closed tanks. EMP IMP4-1 - Imperial OG 2021-2025 EP187 Program, p1-39, [Link](#)

Recommendation 7.6 That prior to the grant of any further exploration approvals, the use of all surface water resources for any onshore shale gas activity in the NT be prohibited.

Recommendation 7.19 That cumulative impacts of petroleum and other activities in the region must be considered by a decision-maker

We express concern that SREBA work to address knowledge gaps has not been completed, much less undertaken more broadly across all areas over which hydraulic fracturing exploration permits (EPs) have been granted, including those granted to Imperial Oil & Gas. This is highly significant due to Imperial Oil & Gas holdings of several tenements directly adjacent to and ecologically interlinked with EP187 - these being for example, EP180, EP181, EP182, EP183, EP184 and EP188.

We are concerned that in the absence of a SREBA, the EMP does not satisfactorily address knowledge gaps in relation to interconnected regional aquifers and the flow rates and associated risks of contamination between them, the existence of stygofauna and the impact of hydraulic fracturing activities upon groundwater dependent ecosystems, as per concerns reflected in the Pepper Enquiry Report¹⁴. We consider this to be significant, noting the high volume of water extracted, combined with the risks of environmental exposure to toxic chemicals in wastewater, either in open evaporation ponds or through release of potentially radioactive mud through drilling processes, which has the potential to effect surrounding fauna and flora surface and subsurface ecosystems¹⁵. Furthermore, we question the social license of such an extractive process, noting ongoing, and unresolved matters in regard to water contamination associated with nearby Glencore and the McArthur River mine.

We also note that Schedule 1 of the Petroleum (Environment) Regulations 2016, insufficiently addresses broader public interest and social licence concerns in relation to voluminous water extraction, much less alternative provisions such as water trading, in the event that water allocations are exhausted, and hence that a full environmental impact assessment under the NT EPA Act is warranted.

With further regard to the EMP, we note insufficient precautionary measures as applies to the following observations:

- Insufficient information on gamma logging to unequivocally differentiate between aquifer formations, such as the Beetaloo Sub-Basin and the Gum Ridge aquifer on EP187;

¹⁴ Pepper Enquiry Report: Summary-Report__April-2018_WEB (1).pdf

¹⁵ A Drilling Log file from SANTOS's Tanumbirini 1 work program in the Beetaloo Basin shows evidence that approximately 21 million litres of fracking fluids were lost within the first 400 metres of a drilling process, in an area in which research has shown the presence of stygofauna[iii]. By comparison, the Imperial Oil and Gas proposal to drill 6-7 wells in a concentrated area could put at least 126-147 million litres of pollutants into local aquifers

- Insufficient precautionary measures regarding fluids used during the initial drilling process that contain a number of chemicals, including biocides that are not authorised for release into water systems. The EMP makes direct reference to the use of biocides. There is a significant risk these fluids will enter the environment outside of their well casings, becoming 'lost' in the underground water systems;¹⁶¹⁷
- Insufficient publicly available data to ascertain the impact of untreated wastewater in open evaporation ponds, noting the EMP proposes anywhere between 24 to 56 open evaporation ponds;
- Insufficient precaution regarding the proximity to groundwater from drilling in shallow shale layers close to a water table closest to the surface (1095 metre down), which presents significant seismic, contamination and salinity risks¹⁸¹⁹;
- Insufficient precautionary measures in relation to EMP proposal to frack 1.1km from a water bore. This is the minimum set back distance permitted, and 1.1km does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination; and
- Insufficient precautionary measures in relation to proximity of creek links, in addition to inadequate flood modelling.

Recommendations:

14. The EMP is refused and Imperial is required to conduct a full assessment under the NT EPA (under Section 50 of the NT EPA Act) to properly address water risks, including interconnectivity of aquifers, flow rates and proper registration of new species and to assess the full cumulative impacts on water including extraction and licensing.

15. The EMP is refused based on Pepper Report Enquiry Recommendation 7.7, noting that interest holders cannot commence production activities in the Beetaloo Sub-basin, or other regions of the NT, until groundwater conditions are understood.

16. The EMP is refused unless or until a systematic SREBA process has been

¹⁶ Table 6, Waste management from Appendix 6 page 15 of the Imperial EMP, [Imperial OG 2021-2023 EP187 Program - Appendices \(nt.gov.au\)](#)

¹⁷ A Drilling Log file from SANTOS's Tanumbirini 1 work program in the Beetaloo Basin shows evidence that approximately 21 million litres of fracking fluids were lost within the first 400 metres of a drilling process, in an area in which research has shown the presence of stygofauna[iii]. By comparison, the Imperial Oil and Gas proposal to drill 6-7 wells in a concentrated area could put at least 126 millions litres of pollutants into local aquifers. It is completely unacceptable to allow these chemicals into aquifers where Stygofauna live and people draw drinking water. Additional references: [i] Gavin Rees, Stefanie Oberprieler, Daryl Nielsen, Garth Watson, Michael Shackleton and Jenny Davis, 2020 "Characterisation of the stygofauna and microbial assemblages of the Beetaloo Sub-basin, Northern Territory " GISERA project number: W18. December 2020. Note: water monitoring and reporting should be undertaken by contractors independent of Santos and other fracking companies.

undertaken into directly impacted and surrounding areas over which Imperial Oil & Gas exploration permits have been approved, these being EP 187, EP180, EP181, EP182, EP183, EP184 and EP188.

Well Operations Management Plan (WOMP)

With reference to the Pepper Enquiry Report:

Recommendation 14.21 That as part of the environmental assessment and approval process for all exploration and production approvals, the Minister be required to consider the cumulative impacts of any proposed onshore shale gas activity.

We note that Schedule 1 of the Petroleum (Environment) Regulations 2016, is an unsatisfactory framework for assessing the full cumulative risks from the proposed schedule or works set out in the Imperial Oil & Gas Pty Ltd 2021-2025 EP187 Work Program Environment Management Plan (EMP) and support the EMP being referred to the NT EPA for full environmental impact statement, as per Section 50 of the Act.

We draw to attention our concern that many essential details in the EMP have been shifted away from public scrutiny and are instead contained within the Well Operations Management Plan (WOMP). This is particularly important in relation to details regarding **Waste Management, Chemicals, Well Integrity, Climate Change, Human Health, Regulatory Compliance and full (plug and abandonment) plans for Rehabilitation.**

Of particular concern is that an approved EMP will not be reflective of changes in work that take place 'on the ground' under WOMP documentation. There is significant risk that unknown changes to 'work on the ground' could adversely impact the environment, and damage Imperial Oil & Gas' social licence to continue current and future proposed work in the area. This is highly significant due to Imperial Oil & Gas holdings of several tenements directly adjacent to and ecologically interlinked with EP187 - these being for example, EP180, EP181, EP182, EP183, EP184 and EP188.

Recommendation:

17. That the EMP is refused unless, or until, it includes a completed WOMP that has been subject to public consultation in order for you to be satisfied that the relevant criteria under the petroleum regulation have been met.

Without access to the WOMP, a summary of further key concerns are listed below. (Please note that these are not exhaustive).

- In relation to EP187, the necessity for a SREBA process to addresses data deficiency in relation to microbiologically-influenced corrosion to well casings, particularly in relation to

the Moorak aquifer and its interconnection to surface waterways including Limmen Bight National Park and the McArthur River

- In relation to EP187, the necessity for systematic due diligence in relation to chemical disclosure as well as assessment by relevant government bodies in relation to carcinogens, biocides, radioactive material and potential PFAS ('forever chemicals;') insufficiently investigated within this EMP and their adverse consequences to water, human and animal health;
- In relation to EP187, we support consideration of the cumulative effects of land clearing, trucking, groundwater extraction and greenhouse gas emissions, and that emissions from EP187 as well as those across the sector are appropriately investigated and reported as a representation of total emissions in the Northern Territory, rather than disingenuously absorbed into national or global GHG emission figures. across industries.²⁰ (refer Section 50 under the NT EPA)
- In relation to EP187 we express concern at the lack of an NT emissions policy and question the appropriateness of introducing new fossil fuel deposits which conflict with global IPCC trends towards less-polluting forms of energy generation. We note that EMP GHG emissions are projected at best, to be approximately 77,500 tCO₂-e per year for consecutive years. We question the cumulative emissions from the flaring of 7 fracked wells, noting that Santos currently contributes approximately 1% of the NT greenhouse gas emissions through its own fracking activities²¹.
- In relation to EP187, we note that Imperial Oil & Gas (Empire Energy) is seeking federal funding through the Beetaloo Cooperative Drilling Program, yet has not demonstrated good faith or commitment to corporate accountability by providing an NT-costed and CPI adjusted financial assurances or bank guarantees to ensure that fracked wells are monitored in perpetuity. Surface rehabilitation is not enough, and there is concern that even plugging and abandonment measures are not enough to adequately counter future and eventual contamination²²²³;

²⁰ Pepper Enquiry Report Recommendation 9.8 That the NT and Australian governments seek to ensure that there is no net increase in the life cycle GHG emissions emitted in Australia from any onshore shale gas produced in the NT.

²¹ Reference required also, human impact here: [Too hot, heading south: how climate change may drive one-third of doctors out of the NT \(theconversation.com\)](https://theconversation.com/too-hot-heading-south-how-climate-change-may-drive-one-third-of-doctors-out-of-the-nt-125444)

²² Note: In a 2019 study published in *The American Economic Review*, Boomhower finds that by requiring firms to show financial assurance through a bond, there is approximately a 70% decrease in orphaned wells [Drilling Like There's No Tomorrow: Bankruptcy, Insurance, and Environmental Risk \(aeweb.org\)](https://aeweb.org/publications/drilling-like-there-s-no-tomorrow-bankruptcy-insurance-and-environmental-risk)

p3

²³ 50 years after it ceased operation "The...second rehabilitation attempt is significant, as it recognises mine rehabilitation isn't always successful, even if it appears so at first. **Rum Jungle serves as a warning: rehabilitation shouldn't be an afterthought, but carefully planned, invested in and monitored for many, many years. Otherwise, as we've seen, it'll be left up to future taxpayers to fix**". [The story of Rum Jungle: a Cold War-era uranium mine that's spewed acid into the environment for decades \(phys.org\)](https://phys.org/news/2020-05-the-story-of-rum-jungle-a-cold-war-era-uranium-mine-that-s-spewed-acid-into-the-environment-for-decades.html)

- In relation to EP187, we note insufficient and unsatisfactory, publicly available information in the Emergency Contingency Plan to adequately address public health concern measures in relation to the Covid-19 pandemic. We note activity plans for high level project work coincide with peak visitation during the NT's dry season.²⁴
 - In relation to EP187, we express concern at the likely prospect of cross contamination through proposed waste traveling through planned piping system and suggest that radioactivity samples of the area are conducted as part of SREBA process prior to further exploration activities;
 - In relation to EP187 we express concern at the significant risk of accident and contamination through proposed trucking of waste chemical long-distance down hazardous black soil areas along the Tablelands Highway, and the potential for wet season transport accidents including spills of highly toxic chemicals
-

Regulations and Compliance

Please refer to our separate summary under section "Failure of Due Process in the Environmental Management Plan for Imperial Oil and Gas project 2021-2025 EP 187 Program (Imperial EMP)" which outlines why believe that the relevant criteria under Petroleum (Environment) Regulations 2016 have not been met, and why the Minister cannot be satisfied of such.

In addition to our main concerns, we draw attention to the following reference points for noting and consideration:

With regards to the Pepper Inquiry Report:

Recommendation 14.11 That the Petroleum Act be amended to make the principles of Ecologically Sustainable Development (ESD) a mandatory relevant consideration for any decision made under that Act in relation to any onshore shale gas industry. That the principles of ESD must be taken into account and applied by a decision-maker in respect of all decisions concerning any onshore shale gas industry²⁵

In our view, this proposal is clearly inconsistent with the principles of ESD, for the many reasons outlined in this submission.

²⁴ (Schedule 1, Part 2 (8) of the Petroleum Environment Regulations (2016)

²⁵ Scientific Inquiry into Hydraulic Fracturing in the Northern Territory (Summary of the Final Report)

We also note that this EMP is beginning to reveal the very problem that the Pepper Inquiry warned against in the final report, where it stated:

“During the course of consultations, many members of the community and some stakeholders expressed a concern about ‘exploration creep’, that is, the risk that a large number of exploration wells are constructed, drilled and hydraulically fractured on an exploration permit, rather than on a production licence, prior to the completion of a SREBA and the implementation of many of the Panel’s recommendations. The Panel agrees that safeguards are needed to mitigate this risk. The cumulative impacts of any onshore shale gas activities that occur during the exploration phase of development must be assessed, taken into account and appropriately mitigated’.”²⁶

It is very clear from this statement, that any approval of this EMP would directly contradict the clear intent of the Pepper Inquiry in this regard - given the absence of a defined threshold for determining ‘exploration creep’ - and noting that cumulative impacts have not been assessed, necessary safeguards are not in place and SREBA has not yet been completed.

CONCLUSION

The 2018 Pepper Enquiry's final report is noteworthy for capturing the Territory's community's overwhelming opposition towards fracking in the NT. It exposed the NTs legacy of contaminated and poorly rehabilitated mines as the source of ongoing community mistrust and the lack of social license to progress any fracked-gas projects.

“In this context, it must be noted that the strong antipathy surrounding hydraulic fracturing for onshore shale gas demonstrated during the consultations did not abate. For a significant majority of the people participating in the Inquiry, the overwhelming consensus was that hydraulic fracturing for onshore shale gas in the NT is not safe, is not trusted and is not wanted”²⁷

In the context of the ongoing failure of the fracking industry to obtain a social license to operate in the Territory, as highlighted above by the Pepper Inquiry, and the multiple, severe inadequacies of the EMP as outlined in this submission, we strongly contend that the EMP must be refused.

First Peoples and Land Justice Issues in Australia: Addressing Deficits in Corporate Accountability (published by RMIT, 17 March 2021)¹

The report notes that all companies should:

- Adhere to international business and human rights norms, including those contained in UNDRIP, ICERD, ICCPR, UN Global Compact, and UN Guiding Principles on Business and Human Rights;
- Consult and cooperate in good faith with First Peoples through their own representative institutions in order to obtain their FPIC before undertaking projects that may affect them, including mining and other utilisation of resources;
- Make and adhere to due diligence commitments to ensure no further damage to sacred sites or anthropological sites.”²

With regard to Imperial Oil & Gas Pty Ltd 2021-2025 EP187 and the principles of FPIC, we note the following report recommendations:

Recommendations (p16):

- Amend the Mining Management Act 2001 (NT) to make the publication of mine management plans mandatory;
- Amend the Environmental Protection Act 2019 (NT) to include the requirement of FPIC from Traditional Owners for projects being assessed under the Act;
- Amend the Environmental Protection Act 2019 (NT) to impose a chain of responsibility on companies and their related parties so that they bear the cost of managing and rehabilitating sites.

With regard to Imperial Oil & Gas Pty Ltd 2021-2025 EP187 and the matter of rehabilitation, we further note the following report recommendations:

Recommendation 15: Use powers under the Inquiries Act 2011 (NT) to investigate the current state and future of the mine, with independent assessment of:

- Rehabilitation scenarios
- Current regulatory requirements;
- The adequacy of the rehabilitation bond;
- The economic viability of the mine. (refers to McArthur River Mine)

Recommendation 16: Amend the Environmental Protection Act 2019 (NT) to include the requirement of FPIC from Traditional Owners for projects assessed under the Act.

Recommendation 17: Amend the Environmental Protection Act 2019 (NT) to impose a chain of responsibility on companies and their related parties so that they bear the cost of managing and rehabilitating sites.

Environment Management Plan Imperial Oil and Gas: 2021-2025 EP 187 Work
Program NT Exploration Permit (EP) 187

Expert Review: Dr Renata Bali
May 2021

INTRODUCTION

I was briefed by the Environmental Defenders Office on behalf of Lock the Gate Alliance to review the document 'Environment Management Plan Imperial Oil and Gas: 2021-2025 EP 187 Work Program NT Exploration Permit (EP) 187' (EMP), particularly those sections relating to terrestrial biodiversity.

As part of my review, I have considered the EMP main report and the following appendices in detail:

- Appendix 01 – Description of the existing environment for the Project Area •
Appendix 01.02 – EP187 Environmental Assessment Report 2021-2023 Seismic and Drilling Program (Fox & Co Environmental, March 2021)
- Appendix 3 – Risk Assessment Framework
- Appendix 4 – Risk Assessment
- Appendix 6 – Waste and Wastewater Management Plan
- Appendix 8 – Fire Management Plan
- Appendix 9 – Weed Management Plan (Fox & Co Environmental, March

2021) I have also reviewed the following documents:

- McArthur River Mine Overburden Management Project Draft EIS – Chapter 10 (Mining and Energy Technical Services Pty. Ltd. 2018)
- EP 187 Environmental Assessment Report 2019 Seismic and Drilling Program (InGauge Energy Australia, May 2019) – referred to in this report as the 2019 EMP
- Referring a proposal to the NT EPA: Environmental impact assessment Guidance for proponents (NT EPA 2021) (Guide for Proponents)
- SREBA Framework
- Expert Witness Code of Conduct

I was asked to prepare a written report that addresses the adequacy of the ecological assessment contained in the EMP. I acknowledge that I have read and prepared the following report in accordance with the NT Supreme Court Practice Direction for Expert Reports and the Expert Witness Code of Conduct.

Of particular relevance to the current review is my previous experience undertaking the following:

- Scientific review of Matters of National Environmental Significance (MNES) for the Jemena Northern Gas Pipeline.
- Independent advice to the Scientific Inquiry into the Hydraulic Fracturing in the Northern Territory (Fracking Inquiry) (Bali 2017a). In particular, I was asked to

identify priority 'no go' zones based on my expertise in assessing linear impacts.

1

- Independent scientific reviews of the Fracking Inquiry's Interim (Bali 2017b) and Draft Final Reports (Bali 2018), with particular emphasis on chapters relating to terrestrial biodiversity.
- Independent review of the Strategic Regional Environmental and Baseline Assessment in the Northern Territory (draft SREBA Framework) (Bali 2020). Specifically, I was asked to review 'Guidance Note for studies of terrestrial ecosystems' and to assess whether these were "appropriate and fit for purpose".
- Scientific review of the Draft Northern Territory Land Clearing Guidelines 2018 with the aim of ensuring that clearing does not "unreasonably contribute to environmental degradation".
- Preparation of a comprehensive discussion papers "Compensating for Edge Effects" for the NSW Roads & Traffic Authority (now NSW Roads and Maritime Services).

My comments on the EMP draw upon the assumptions, reasoning and references detailed in my submissions to the Fracking Inquiry (Bali 2017a, 2017b, 2018).

A copy of my CV is attached (Attachment 1).

BACKGROUND

The Fracking Inquiry concluded that biodiversity impacts would be kept both 'low' and acceptable provided that regional assessments are undertaken. The following key points are summarised from Section 15.3.3 of the Final Report and outlined on p. 61 of the SREBA Framework:

- ☐ Regional assessments should be comprehensive, both in terms of space (covering all major vegetation types across the region) and biota (including all groups of vascular plants and terrestrial vertebrates, and representative terrestrial invertebrates). The data should be assessed for patterns of species richness and endemism, and for the occurrence of threatened species.
- ☐ Across much of the NT, there is insufficient coverage of survey data to be able to place a strong degree of reliance on existing mapping datasets. This applies especially to the coverage of ground data that will be required for a regional assessment of an industry with a potentially large footprint and a potentially significant cumulative impact, as distinct from an individual project assessment with a smaller total footprint. Significant on-ground work will therefore be needed to comprehensively map the occurrence and distribution of terrestrial biodiversity assets of regions likely to be affected by the extraction of any onshore shale gas.
- ☐ It will be critical to ensure that verifiably consistent methods are being used during the baseline assessment.

It should be noted that the 'drilling program' as assessed in the EMP includes the following activities: infill seismic survey, well pad and access construction, drilling, hydraulic fracturing and extended production testing.

The EMP can only be approved if the Minister is reasonably satisfied that the approval criteria in cl.9 of the Petroleum (Environment) Regulations 2016 (PER) have been met. The

approval criteria are listed below.

2

- a) The EMP includes all information required under Schedule 1 of the PER, including (amongst others):
 - i. Description of the regulated activity
 - ii. Description of the existing environment
 - iii. Assessment of environmental impacts and risks (including indirect and cumulative impacts)
 - iv. Environmental outcomes and environmental performance standards
 - v. Chemicals used in the course of fracking (if relevant)
 - vi. Demonstration of how all 'legislative requirements' will be met
 - vii. Implementation strategy
 - viii. Information about stakeholder engagement, and
 - ix. Arrangements of recording, monitoring and reporting information
- b) The EMP is appropriate for the nature and scale of the regulated activity.
- c) The EMP demonstrates that all environmental impacts will be reduced to a level that is 'as low as reasonably practical' and 'acceptable'

GENERAL COMMENTS

In my opinion, and based on my submissions to the Fracking Inquiry, the EMP and its supporting documents have failed to:

- ☐ Take into account or assess the cumulative impacts of seismic and drilling programs within EP 187 in relation to multiple planned and approved developments in adjacent tenements. This is despite the fact that EP 187 forms a relatively small proportion of the McArthur Basin which is subject to extensive gas exploration activities.
- ☐ Provide enough information to determine if a comprehensive survey was undertaken in EP 187 in order to address knowledge gaps. No data was provided to verify that baseline data was collected systematically to allow future replication and monitoring.
- ☐ Meet Recommendations 14.19 and 7.12 of the Fracking Inquiry's Final Report (as discussed below). The Final Report stressed that all of the recommendations must be accepted and implemented to mitigate impacts to an acceptable level (p. 454, Final Report).

For these reasons, in my opinion, the EMP fails to meet several of the approval criteria as set out in the PER. Without this information, it is my view that the EMP does not demonstrate that all environmental impacts will be reduced to a level that is as 'low as reasonably practical' and 'acceptable'.

Furthermore, it is my opinion that the EMP is not appropriate for the nature and scale of the regulated activity on EP 187 or within any other lease area in the McArthur Basin (approval criterion in cl.9(b) of the PER). Due to the extensive nature and scale of onshore gas development and the risk of direct, indirect and cumulative biodiversity impacts associated

with multiple developments, the assessment process should be more rigorous and prescriptive than that required for approval under the PER (for example, that under the Environment Protection Act 2019).

3

CUMULATIVE IMPACTS

The most recent State of Environment Report (Cresswell & Murphy 2017, hereafter referred to as the Australia SOE) cautions that the greatest potential for negative environmental impacts results from the “cumulative impacts of extensive development in highly prospective regions or where diffuse exploration and development take place across large regions.” This describes the type of onshore gas development that is occurring or is planned across the McArthur Basin.

The Fracking Inquiry recognised this risk and made a specific recommendation that the Minister must be satisfied that the cumulative impacts of a proposed activity are thoroughly dealt with in an EMP to mitigate the risk of exploration creep:

Recommendation 14.19 (p. 414)

That prior to granting any further exploration approvals, cl 3(2)(b) of Sch 1 of the Petroleum Environment Regulations be amended to read as follows:

“3(2)(b) [delete ‘as far as practicable’] any cumulative effects of those impacts and risks when considered both together and in conjunction with other events, activities or industries, including any other petroleum activities and extractive industries, that have occurred or that may occur in or near the location of the activity or in or near the region, area or play where the regulated activity is located”.

Furthermore, the SREBA final report states on page 14:

“An important value of the SREBA will be to provide a robust information a base to facilitate assessment of regional and cumulative effects of likely development scenarios for onshore gas development, rather than effects being considered only on a well-by-well, or project-by project basis.”

I can find no evidence in the EMP or its supporting documents to demonstrate that the cumulative impacts of seismic and drilling activities have been assessed in relation to extensive onshore gas development in the McArthur Basin (as discussed below). The EMP only refers to the cumulative impacts resulting from incremental impacts associated with the 2020 and 2021-2025 drilling programs within EP 187 (Table 3.1.1). This is not consistent with the Fracking Inquiry recommendations or with the intent of the SREBA.

Even within EP 187, it appears that the biodiversity surveys were undertaken only within those areas proposed for seismic lines and well pads. Similarly, threatened species’ likelihood of occurrence was only estimated within these areas. This narrow view does not allow decision makers to consider the extent and nature of cumulative impacts.

Furthermore, there is a very real risk that the biodiversity impacts associated with incremental changes to construction footprints within a single exploration lease over time,

as shown in Table 3.1.1 in the EMP, will never be considered as significant. This approach breaks down the overall impact associated with a large development into 'bite size' pieces which may be assessed individually as having no significant impact. However, when viewed cumulatively over the lifetime of

4

a development, they may result in an incremental decline in biodiversity and threatened species populations and/or degradation of habitats that will go undetected.

In failing to assess cumulative impacts, it is my opinion that the EMP does not satisfy the approval criterion in cl. 9(a) and Sch 1, cl. 3 of the PER, or the Fracking Inquiry's Recommendation 14.19. If this standard of EMP is adopted for other onshore gas developments in the McArthur Basin, there is a risk that it will result in the decline in threatened species and their habitats.

Regional context of EP 187

At 4,427 square kilometres, EP 187 forms a relatively small portion (7%) of the Empire Energy (100% owner of Imperial Oil and Gas) holdings as shown in Figure 1 of Appendix 01.02. The seven Empire Energy exploration permit areas extend northwards past the Gulf of Carpentaria to the Arafura Sea, covering a total area of 59,172 square kilometres.

Figure 1: Empire Energy Imperial Oil & Gas "Unlocking Australia's Energy Future" SEAAOC Conference Presentation Darwin September 2018, p 7.

EP 184 adjoins EP 187 directly to the north. Together they cover 15.637 square kilometres (26% of Empire Energy holdings). EP 184 was the first of Empire's exploration permits to be approved.¹

¹ <https://www.dmsprojects.net/australia/projects/empire-energy-mcarthur-basin-ep-184/PRJ00020003>

5

Interestingly, Appendix 5 of the 2019 EMP refers to two previous environmental assessments that I was not able to view:

- Environmental Assessment Report, EP 184 and EP 187 (Premise, August 2018) Report No. 1802587 (rev e)
- Preliminary Ecological Assessment Report, EP 184 and EP 187 (Ozecology, February 2016) Report No. R0024996

In my opinion, a survey and assessment of the combined leases would give a more accurate estimate of the biodiversity values in the region. It would also partially take into account the cumulative impacts that could be expected, particularly with regard to threatened species whose known distribution ranges overlap multiple lease areas (e.g. Gouldian Finch). However, the EMP does not summarise the ecological values of the combined leases. Consideration of each exploration lease area in isolation increases the risk of biodiversity loss due to cumulative impacts.

Empire's holdings also represent a relatively small proportion of the planned and approved onshore gas exploration projects in the surrounding McArthur Basin.² Santos, Origin Energy, Armour Energy and Hancock Prospecting all have lease applications or permits in the vicinity of EP 187. Further, development in the McArthur Basin needs to be considered in relation to 85% of the Northern Territory that is under application for shale gas exploration permits or has already had exploration permits granted (see Attachment 2).

Any cumulative impact assessment must also consider all other planned or approved developments (e.g. pastoral, mining) in the region. Most notable with respect to EP 187 is the McArthur River Mine (MRM) located 65 kilometres SW of Borroloola.

The EMP has not assessed the cumulative impacts of other planned or approved developments in the region, including the MRM, and therefore fails to meet the approval criterion in cl. 9(a) and Sch 1, cl. 3 of the PER. Without a cumulative impact assessment, the EMP has not demonstrated that it has reduced biodiversity impacts to a level that is acceptable (approval criterion in cl. 9(c)(ii)).

Gouldian Finch

Based on my review of the 2019 and 2021 EMPs, I found no evidence that systematic surveys were undertaken for the Gouldian Finch, a species listed on the Environmental Protection and Biodiversity Conservation Act 1999 (EPBC Act) as endangered. It appears that all records for this species both within and in the vicinity of EP 187 were anecdotal. Despite the apparent lack of data and the existence of potential habitat on the site, it was concluded that impact to this species would be low "due to the narrow linear nature of

disturbance (and localised regarding well pads)” (p. 18, Appendix 01.02). It should be noted that likelihood of occurrence for all threatened species was estimated with respect to direct impacts within the investigation corridors only, and without apparent consideration of indirect impacts or the regional context.

² <https://www.dmsprojects.net/australia/projects/empire-energy-mcarthur-basin-ep-184/PRJ00020003>

6

The Gouldian Finch is potentially affected by indirect impacts including water availability and quality and the interaction between weed invasion, fire frequency and grazing by introduced herbivores. These potential cumulative impacts should be assessed in a regional context and not on a site-by-site or well-by-well basis.

In my opinion, the EMP should have taken a more precautionary approach to impact assessment for this species by undertaking systematic surveys in potential habitat and assessing cumulative impacts throughout the combined areas of EP 187 and EP 184. Standard methods for surveying nationally threatened bird species can be found in Commonwealth of Australia (2010).

The MRM, located within the Gulf Fall and Uplands Bioregion near EP 187, has recently been subject to extensive surveys as part of its Phase 3 expansion (Mining & Energy Technical Services 2018). The list of EPBC Act listed species is similar for both sites and includes the Gouldian Finch. The MRM EIS authors undertook standardised surveys for threatened species likely to occur (Table 10-2). They found that the Gouldian Finch was a regular visitor to the mine lease area, although in small numbers. They concluded that small numbers of finches are likely to use extensive areas of the mineral lease sporadically. They assessed the potential impacts of mining activity on nesting and feeding sites and water quality and concluded that the overall risk of Phase 3 mining on this species was high (Table 10-5).

Little is understood about habitat utilisation of Gouldian Finches and it is likely that most habitats occupied by this species are sub-optimal (O'Malley 2005). It is not possible to map its critical habitat as it can disappear from some areas for several seasons or reappear in other areas when rainfall, grazing and fire makes habitat suitable once again. It is a highly mobile species whose distribution range overlaps EP 187; it is considered to be a regular visitor to nearby MRM in small numbers. For these reasons, I am of the strong view that targeted surveys for the Gouldian Finch should be an integral part of all project-based EMPs within the species' distribution range in order to address the knowledge gaps that were identified by the Fracking Inquiry and the SREBA Framework, and to provide baseline data for future monitoring.

As most of the distribution range of the Gouldian Finch in the Northern Territory overlaps gas exploration areas, failure to undertake cumulative impact assessment is likely to result in population decline or extinction because so little is known about this species' distribution, habitat and movement patterns. Furthermore, threatened species do not recognise lease boundaries. If EMPs continue to assess only those areas directly impacted by construction of seismic lines and well pads and fail to consider their own future growth as well as that of gas developments in the region, there is a risk that those species whose distributions span

multiple leases will decline through incremental loss and degradation of habitat.

Despite the lack of systematic survey, the EMP concluded that threatened species (including the Gouldian Finch) would not be significantly impacted by the drilling program and that therefore an Environmental Impact Assessment (EIA) was not required under the Environment Protection Act 2019 (EP Act) (Table 2.1). However, given the lack of systematic survey for threatened species and the failure to assess indirect and cumulative impacts, the EMP has not demonstrated that an EIA is not required.

7

The Guide for Proponents clearly states that cumulative impacts are taken into account when determining whether or not an impact is significant (Section 6.2). It also cautions that impacts “need to be considered for the life of the proposal and after the proposal ceases, both in isolation and cumulatively with other reasonably foreseeable or approved proposals”. According to the pre referral screening tool (Appendix 1), cumulative impacts can also trigger a referral.

Importantly, if there is any doubt regarding the significance of potential direct, indirect or cumulative impacts on threatened species, the departmental advice is to refer the project/action to the relevant Minister (see p. 24, Guide for Proponents and <https://www.environment.gov.au/system/files/resources/56a875c6-090b-47fc-894f-6c5f94f4db73/files/factsheet-submitting-referral.pdf>)

It is my opinion that, with regard to threatened species and especially the Gouldian Finch, the EMP has not met the approval criteria in cl. 9(a) and Sch 1 cl. 3, 4 & 11 or cl. 9(c) of the PER.

SURVEY METHODOLOGY

It appears that the survey methodology used as a basis for the EMP relies heavily on existing databases, despite the Fracking Inquiry’s Final Report cautioning against this. The intent of the SREBA is to address the knowledge gaps and establish appropriate baselines for future monitoring.

The Fracking Inquiry recognised that existing Northern Territory mapping datasets cannot be relied upon and recommended that significant “on-ground work will therefore be needed to comprehensively map the occurrence and distribution of terrestrial biodiversity assets of regions likely to be affected by the extraction of any onshore shale gas.” (Chapter 15, p. 448)

The SREBA also identified the effects of this knowledge gap on the ability to properly assess risks (p. 8):

“Limited information on biodiversity assets and their location impedes the ability to properly assess the risks of any unconventional gas development (especially cumulative impacts over large areas) and reduces the ability to plan the location of infrastructure to minimise the risk of unacceptable impacts to aquatic and terrestrial

biota.”

The survey methodology has not been described in detail in Section 4 of the EMP or in Appendix 01.02. Although the latter document states that “a number of previous environmental investigations” have been undertaken to identify landscape values and no-go areas (p. 18, Appendix 01.02), these are not summarised or described in detail in documents associated with the EMP.

Appendix 01.02 states that “targeted” searches were undertaken “in relation to seismic and drilling activities” (p.5). However, these were not described in detail except to say that they took place in March 2021 during optimal wet season conditions and that they were conducted on foot, by vehicle or by helicopter. Biodiversity surveys were conducted at the same time as weed surveys and both activities were restricted to investigation corridors within EP 187 (see Figures 5-1 to 5-3).

It appears that no attempts were made to search the wider area or to provide a regional context that would be subject to indirect impacts or edge effects. For example, edge effects can extend well

8

beyond 100 metres (e.g. behavioural effects, seed dispersal). Similarly, fracking can cause changes to natural water flows and increase sedimentation outside the investigation corridor. If indirect impacts are not identified and monitored then the EMP does not satisfy the approval criteria in cl.9(a) and Sch 1 cl.3, 4 & 11 or cl.9(c) of the PER.

Based on my experience, it is standard practice to describe the study area and/or investigation corridor as part of any project-based environmental assessment; however this was not included in Appendix 01.02. Appendix 01.01 (p.1) describes the investigation corridor associated with seismic lines as being 100 m in width; the wider investigation corridor would allow some flexibility in choosing a final route that minimises vegetation clearing. A clearing area radius measuring 750 m was investigated around each well site. However, this is inconsistent with Appendix 01.02 (p. 3) that states that up to 75 ha would be cleared to accommodate 6 well pads (i.e. 12.5 ha per well pad). It therefore appears that the EMP assessed only a small proportion of the area required for each well pad and does not satisfy approval criterion in cl.9(a) and Sch 1 cl.3 of the PER.

I could not find any additional survey detail in Appendix 5 of the 2019 EMP. In 2019, “targeted” searches were conducted during October and November 2018 and April 2019 and were similarly restricted to the areas proposed for seismic lines and well pads. Biodiversity surveys were conducted concurrently with weed surveys, with key environmental characteristics and potential constraints being noted. Opportunistic observations were also made.

Not enough information has been provided in any of the reports to ensure that “verifiably consistent methods are being used during the baseline assessment” (Fracking Inquiry Final Report, p 448). As a result, it would not be possible to replicate surveys or monitor the short- and long-term impacts of gas exploration and drilling. Based on my experience undertaking environmental impact assessments, I would expect project-based EMPs to apply fine-scale assessments and detailed ground-truthing to augment regional databases. As I found no evidence within any of the reports that systematic baseline data was collected, the EMP

does not demonstrate that environmental outcomes and performance standards have been considered (approval criterion in cl.9(a) and Sch 1 cl. 4 of the PER) or that monitoring can be achieved post-development. It is therefore unclear if environmental impacts will be reduced to a level that is 'acceptable' (approval criterion in cl.9(c)(ii)).

VEGETATION COMMUNITIES

Vegetation communities found throughout EP 187 are not described or mapped within the EMP or its appendices. The vegetation community classification framework used is not defined. The SREBA recommends the Queensland Regional Ecosystem framework (Sattler & William 1999, Neldner et al

2019) to describe vegetation communities. Baseline data needs to be collected and described consistently in order to compare data amongst multiple projects and/or to assess future impacts associated with gas exploration and drilling.

It is unclear if the vegetation mapping shown in Figure 19 (Appendix 01) was used as a basis for surveys undertaken as part of Appendix 01.02. These are generally useful for predicting the distribution of flora and fauna species but not as a basis for monitoring. If similar broad-scale mapping was used, then in my experience, extensive ground-truthing would be undertaken as part

9

of pre-development project-based assessments in order to accurately describe vegetation communities. This data would form the baseline against which any alterations to species composition or structure could be compared (e.g. changes due to edge effects such as alterations to soil moisture) post-development.

THREATENED FLORA AND FAUNA SPECIES

As no details are provided in any of the relevant reports about the methods used to 'target' threatened species, I assume that searching was restricted to seismic lines and well pads only. It is therefore not surprising that no threatened flora species were recorded. Based on my experience, systematic surveys or random meanders undertaken throughout potential habitat in EP 187 would have a higher probability of detecting rare or threatened species. Without pre-construction baseline surveys and a systematic monitoring program, it will not be possible to determine the potential direct, indirect and cumulative impacts on threatened species during and post-construction. In that case, the EMP has not demonstrated that all environmental impacts will be reduced to a level that is acceptable (approval criterion in cl.9(c)(ii) of the PER).

It should be noted also that likelihood of occurrence for threatened species was only considered within seismic and drilling areas, and not for EP 187 in its entirety. In my opinion, this is not the intent of the Fracking Inquiry's final recommendations or SREBA because it does not address gaps in knowledge or provide consistently collected baseline data for future monitoring.

According to Table 3 of Appendix 5 in the 2019 EMP, database searches indicated that five

significant flora species (under the Territory Parks and Wildlife Conservation Act 2000) were previously recorded and could potentially occur within EP 187. This was reduced to a single species, *Polygala petrophila*, in the 2021-2025 EMP. No reasons are given for omitting species or to justify why Data Deficient (DD) species are not considered further in the EMP. It is my opinion that these are the very species that should be targeted by both regional and project-based surveys in the bioregion in order to fill existing knowledge gaps and to ensure that these species are not/do not become threatened as a result of gas exploration and drilling.

Database searches in both EMPs indicated that 12 threatened fauna species and 14 migratory species could potentially occur in EP 187. Only one of these, the Gouldian Finch, listed as Endangered at the national level and Vulnerable in the Northern Territory, was identified during March 2021 surveys when a single finch was observed at a rest stop adjacent to the Carpentaria Highway within EP 187. Appendix 01.02 of the EMP reports that 8 finches were observed 22 kilometres east of the proposed site. The 2019 EMP states that a local pastoralist sighted a finch (unverified) at a rest stop approximately 500 m north of the easternmost seismic line.

Given its conservation status and distribution range, its occurrence within EP 187, the presence of potential habitat (Plate 2) and its high mobility, it is my opinion that targeted searches should have been undertaken for the Gouldian Finch. Standard survey methods have been described (Commonwealth of Australia 2010) and include targeted searches at waterholes in the late dry season, association with breeding black-faced woodswallows in the early wet season, and area searches in potential habitat. Restricting impact survey effort to seismic lines and well pads does not

10

take account of the potential indirect and cumulative impacts of gas exploration and drilling on this endangered species.

Other threatened fauna species that have a moderate likelihood of occurrence in EP 187 are the Grey Falcon and the Yellow-spotted Monitor; both species are listed as Vulnerable in the Northern Territory. Although these species are mentioned in the EMP, they are not discussed further with respect to potential impacts in the EMP.

Database searches indicated that four significant fauna species were previously recorded and could potentially occur within EP 187 (Table 3). These include DD species, the Sombre Whipsnake and Common Blue-tongue Lizard and the Near Threatened (NTh) Australian Bustard. Another NTh species, the Spectacled Hare-wallaby, is not included in the table, but potential habitat for this species is indicated in Plate 3 (EMP) and its distribution range overlaps EP 187. These species are of particular concern as they are ground-dwelling with limited mobility and are consequently more vulnerable to potential threats associated with the gas industry such as habitat clearing and fragmentation, increased predation, road mortality, altered fire regimes and weed invasion. For reasons that are not clear, these species are not considered further in the EMP.

In my opinion these are the very species that should be targeted in both regional and project-based surveys in the relevant bioregion in order to fill existing knowledge gaps. As so little is known about their distribution and abundance, they are at greater risk of becoming threatened as a result of gas exploration and fracking. Systematic baseline surveys are required in order

to monitor these species

post-development. In failing to consider DD and NTh species, it is my view that the EMP has not met criteria in cl.9(a) and Sch 1 cl.3, 4 & 11 or cl.9(c) of the PER.

IMPACT ASSESSMENT AND MITIGATION

The EMP states on page 45 that:

“Known sensitive receptors, critical habitats, important habitats and cultural heritage sites have been avoided during corridor selection.”

“The area of vegetation to be cleared for infrastructure development (including well pads, roads and pipeline corridors) has been minimised through efficient design and, where possible, use of existing infrastructure and the co-location of shared infrastructure...”

No evidence in the form of data or mapping has been provided in the EMP or its supporting documents to demonstrate how this has been achieved. I am therefore not able to verify if all reasonable attempts have been made to avoid and minimise impacts associated with corridor selection and/or project design.

The environmental assessment (Appendix 01.02, p. 18) concluded that the proposed drilling program would not significantly impact any threatened species and therefore an EIA was not required:

“Habitat exists for some conservation significant species in the area, however given the narrow linear nature of disturbance (and localised regarding well pads), habitat

11

requirements and likelihood of occurrence, impacts from proposed seismic, well pad and access track construction are considered low.”

However, it appears that the assessment was based on those areas directly impacted by vegetation clearing and did not consider in detail the potential indirect impacts such as fragmentation, weed invasion, access to feral predators, altered fire regimes, road mortality, light, noise and vibration (from seismic activity). These impacts are all associated with onshore gas development and have been reviewed in detail in relation to Northern Territory flora and fauna in Bali (2017a). In my opinion, the EMP does not satisfy the approval criterion in the PER at Sch 1 cl 3 with regard to the assessment of indirect impacts.

Fragmentation and edge effects

The Fracking Inquiry noted that, despite the prevalence of extensive pastoralism, the Northern Territory’s terrestrial ecosystems are “in good condition and largely intact” (Chapter 8, p. 169). The bioregions overlying basins that may be subject to shale gas extraction have generally experienced less than 1% clearing (in Bali 2017a).

Therefore, the construction of thousands of kilometres of seismic lines, roads and easements over multiple lease areas covering the McArthur Basin (including EP 187) will fragment these intact areas and expose them to a wide range of edge effects including: changes to microclimate, hydrology, floristics, pattern and frequency of fire; invasion by exotic plants and animals; and improved access for predators. Edge effects can extend from 50 m to more than 2 km from the vegetation edge (Bali 2017a).

Edge effects are of particular concern for threatened and near threatened species such as the Yellow-spotted Monitor, Australian Bustard and Spectacled Hare-wallaby because cleared corridors are used by patrolling introduced predators and are vectors for the spread of cane toads and weeds (Bali 2017a). Terrestrial ground-dwelling species are at risk from increased predation (hare-wallaby, bustard), ingestion of cane toads (monitor), loss of habitat and road mortality.

As I could not find any data indicating that fragmentation and edge effects were assessed as part of the EMP, it is my view that it fails to satisfy the approval criterion in cl. 9(a) and Sch 1 cl. 3 of the PER.

Feral predators

No feral predators were recorded during biodiversity surveys and it appears that no attempts were made to collect baseline data on predator/cane toad numbers or distributions within EP 187. Within the Sturt Plateau and Gulf Fall and Uplands bioregions, cats are widespread but occur in low numbers while foxes are increasing and cane toads have recently established (Bali 2017a). Without baseline data, it is not possible to monitor potential changes in predator/cane toad populations as a result of the drilling program and beyond. Monitoring is necessary to determine if control measures

12

will be required in future. In my opinion, the EMP does not fulfill the approval criterion in cl.9(a) and Sch 1 cl. 11 of the PER.

Wastewater

I note that Table 3.1.1 in the EMP indicates that 1-2 open-topped tanks and 3 open-topped pits would be installed for each well pad. This is not consistent with the Fracking Inquiry's Recommendation 7.12 that states:

That prior to the grant of any further exploration approvals, to reduce the risk of contamination of surface aquifers from on-site spills of wastewater:

- the EMP for each well pad must include an enforceable wastewater management plan and spill management plan;
- enclosed tanks must be used to hold all wastewater [emphasis mine] and
- the well pad site must be bunded to prevent any runoff of wastewater, and be treated (for example, with a geomembrane or clay liner) to prevent the infiltration of wastewater

spills into underlying soil.

Mitigation measures proposed include fencing of the well pad (p. 53, EMP) and open-topped pits (Appendix 6, EMP). It appears that at least one open-topped storage tank would be located within exclusion fencing (Figure 3, Appendix 6). Appendix 6 recommends the installation of “fauna ladders” in pits and open-topped treatment tanks and fencing around pits.

Table 24 of the EMP summarises the proposed monitoring program. In the case of wastewater treatments tanks and pits, it recommends daily tank and pit inspections for carcasses to “identify if they are listed or not listed species”, identifying any carcasses present during tank and pit emptying and ad hoc fauna observations around wastewater treatment tanks. The approach taken in Appendix 6 is similar:

“Where fauna mortalities are encountered and clearly associated with wastewater storage activities, fauna deterrents will be implemented to prevent future exposure.”

The proposed mitigation measures are not acceptable and do not represent a precautionary approach or best practice. Fauna deterrents should always be applied at the outset regardless of the risk level, especially when they are readily available, well-used and reasonably effective (e.g fencing around all containment ponds, exclusion netting, removal of lighting near pits/tanks).

I outlined my concerns about fauna having access to wastewater in Bali 2017b. In my opinion, it is necessary that all practical mitigation measures are undertaken to ensure that threatened or non threatened fauna do not have ready access to wastewater for drinking or foraging. I agree with the Fracking Inquiry that all wastewater tanks should be enclosed without exception. This is consistent with a precautionary and best practice approach.

13

Weeds

The Fracking Inquiry concluded on p. 190 of their final report that there is a ‘high’ risk of substantial spread of invasive weed species associated with gas development in the Northern Territory. Apart from the addition of a ‘dedicated weed officer’, the responsibility for pre-construction weed survey and management falls onto proponents as part of project-based EMPs. There is nothing new with this approach that is implemented as part of all Australian developments.

Weed surveys were conducted along the seismic lines, the well pads and along the Carpentaria Highway in the EMP. They did not take into consideration the regional context or the cumulative impacts of multiple gas developments. My concerns about SREBA recommendations for baseline surveys are outlined in Bali (2020).

Given the current wide application of EMPs and our failure to halt or even slow weed invasions across Australia (Australia SOE), I do not agree with the Fracking Inquiry’s

approach to weed control associated with extensive onshore gas development. However, by restricting weed surveys to those areas subject to increased traffic (Carpentaria Highway) or directly impacted by construction, it does not consider indirect or cumulative impacts of seed dispersal. Therefore, the EMP does not satisfy the approval criterion in cl.9(a) and Sch 1 cl.3 of the PER.

Noise, light and vibration

Noise, light and vibration (i.e. seismic testing, fracking) have the potential to significantly impact fauna, especially when considered cumulatively. These impacts are often ignored as there is little scientific research to demonstrate their effects on species life cycles and behaviour (Bali 2017a).

However, there is anecdotal evidence in the form of satellite imagery to show that cumulative fracking activities and especially flaring, can emit the same light as a city.³

The EMP only mentions noise and light impacts in relation to humans and not wildlife. Applying a precautionary approach, every effort should be made to minimise light spill and flaring activities within EP 187. Excessive lighting can impact avian migratory and hunting behaviour. The noise of compressor stations has been shown to interfere with the hunting behaviour of owls in North America (Mason et al. 2016). It may also affect territorial calling by birds (Northrup & Wittemyer 2012). It is therefore important that compressor stations which emit noise on a 24-hour basis, are sited away from any important habitats.

While the EMP may consider that the impacts of noise and light are not significant under the current drilling program, these should be assessed in relation to the multiple gas developments planned and

³ See for example:

<https://www.smithsonianmag.com/smart-news/at-night-giant-fields-of-burning-natural-gas-make-north-dakota-visible-from-space-2533561/>
<https://geology.com/articles/oil-fields-from-space/>
<https://earthobservatory.nasa.gov/images/79810/gas-drilling-north-dakota>

approved in the McArthur Basin. In my opinion, the EMP does not satisfy the approval criterion in cl.9(a) and Sch 1 cl.3 of the PER with regard to the assessment of indirect impacts.

CONCLUSION

It is my opinion that, with regards to impacts on terrestrial biodiversity, the EMP does not meet the approval criteria relating to impact assessment and risks (approval criterion in cl.9(a) and Sch 1 cl.3 of the PER). The EMP has not assessed the potential cumulative direct and indirect impacts of multiple extensive gasfield developments on biodiversity or

threatened species. By assessing the impacts of each drilling program in isolation, there is a risk that impacts to those threatened species whose distribution ranges overlap multiple lease areas will be minimised/missed, resulting in their incremental decline. Furthermore, no 'environmental outcomes' or 'environmental performance standards' (approval criterion in cl.9(a) and Sch 1 cl.4 of the PER) have been determined for threatened flora and fauna species, especially the Gouldian Finch (Table 28, EMP).

In my opinion, the EMP may fail to satisfy 'arrangements for monitoring' (approval criterion in cl.9(a) and Sch 1 cl.11 of the PER). Very little mapping or data relating to surveys were presented in the EMP or its appendices. Surveys were restricted to areas directly impacted by seismic lines and well pads and did not record any threatened or introduced flora or fauna species. I could find no evidence that systematic surveys were undertaken for threatened species (e.g. Gouldian Finch) in suitable habitat within EP 187. Future monitoring will not be possible if systematically collected baseline data is not available pre-development. Without monitoring, there is a risk that threatened species and their habitats will decline and/or that introduced predators will increase undetected.

The EMP does not provide any data from baseline surveys and does not demonstrate that the drilling program will avoid indirect or cumulative impacts on threatened species or their habitat. It is therefore my opinion that it does not demonstrate that all biodiversity impacts will be reduced to a level that is 'as low as reasonably practical' and 'acceptable' (approval criteria in cl.9(c) of the PER).

Furthermore, it is my opinion that the EMP is not appropriate for the nature and scale of the regulated activity on EP 187 or within any other lease area in the McArthur Basin. Due to the extensive nature and scale of onshore gas development and the risk of direct, indirect and cumulative biodiversity impacts associated with multiple developments, the assessment process should be more rigorous and prescriptive than that required for approval under the PER (for example, under the EP Act 2019).

NAME:

Renata V Bali

QUALIFICATIONS:

Bachelor of Science (Hons Zoology), University of British Columbia

Doctor of Philosophy (Zoology), University of New South Wales

CAREER OVERVIEW:

2018- Senior Environmental Planner, Biosis Pty Ltd

2017-18 Panel member, Strathfield Council Local Planning Panel (LPP) 2015-16

Researcher, Better Planning Network (BPN)

2014- Expert Scientific Advisor to the NSW Environmental Defender's Office (EDO) 2000-08 Director,

Ecosense Consulting Pty Ltd

1998-2000 Associate, Biosis Research Pty. Ltd.

1995-98 Senior Consultant, Biosis Research Pty. Ltd.

1992-94 Research Fellow, UNSW

1988-92 Senior Research Biologist, Biosis Research Pty. Ltd.

FIELDS OF COMPETENCE:

environmental planning

environmental impact assessment

research and critical analysis

peer and scientific review

technical writing and editing

excellent verbal and written communication skills

PROFESSIONAL EXPERIENCE:

Dr Renata Bali has over 45 years' experience in environmental impact assessment and critical and scientific review for a wide diversity of projects NSW, Victoria and Queensland. She has undertaken environmental assessments on major infrastructure projects, including Pacific Highway Upgrades, the Sydney Second Airport and various Very Fast Train proposals.

Since 2018, Renata has undertaken numerous planning assessments across NSW, including the preparation of Reviews of Environmental Factors (REFs), due diligence advice and EPBC referrals. These cover a wide range of development types from road construction and upgrades to walking and bike trails, sporting facilities, sewer lead-ins, solar farms and the delivery of domestic and environmental water flows.

Dr Bali has provided expert evidence in the NSW Land & Environment Court and at Commissions of Inquiry and has particular expertise in the area of linear development and edge effects. Recently, she prepared several submissions to the Scientific Inquiry into Hydraulic Fracturing in the Northern Territory on behalf of the EDO NT and conducted independent scientific reviews of the Strategic Regional Environmental and Baseline Assessment (draft SREBA framework) and the Draft Northern Territory Land Clearing Guidelines 2018.

17

KEY PROJECT EXPERIENCE:

Environmental Planner, preparing the REF for the Snowies Iconic Walk to avoid and minimise impacts on endangered ecological communities and habitat for threatened species in Kosciuszko National Park.

Environmental Planner, preparing an REF for works associated with the upgrade of crossings on Tuppall and Native Dog Creeks, Tocumwal, to allow for increased delivery of environmental water flows.

Environmental Planner, preparing a referral under the EPBC Act on behalf of Albury City Council for the 7-kilometre Thurgoona Link Road linking the Thurgoona Growth Area to the Hume Highway in Thurgoona, Albury, NSW.

Environmental Planner, undertaking a review of scientific and technical reports in order to compile best practice guidelines for erosion and sedimentation controls and for native vegetation protection for Albury City Council, NSW.

Environmental Consultant, preparing a referral under the EPBC Act for the removal of an area of Grassy Box Woodland MNES as part of the works proposed for the extension of Rockwood Quarry, Table Top, NSW.

Environmental Planner, preparing the REF for the Main Range Walk Realignment in Kosciuszko National Park to avoid a critically endangered ecological community and habitat for threatened flora and fauna species.

Environmental Planner, preparing the REF for works associated with the delivery of the Nimmie-Caira (Gayini) Stock and Domestic Water Supply Project, a water savings measure to support sustainable grazing practices.

Independent Reviewer, preparing submissions to the Scientific Inquiry into Hydraulic Fracturing in the Northern Territory to identify fragmentation impacts and to recommend 'no-go' zones.

Independent Reviewer, critically reviewing the Draft Northern Territory Land Clearing Guidelines (2018).

Independent Reviewer, critically reviewing the assessment of Matters of National Significance undertaken for the Jemena Northern Gas Pipeline Draft EIS, NT. Independent Reviewer, identifying environmental issues associated with the REF for works undertaken as part of the Interim Beach Stabilisation Works at Belongil, Byron Bay, NSW.

Independent Reviewer, critically reviewing the REF for works associated with the construction and operation of Santos' Leewood Produced Water Treatment and Beneficial Reuse Project.

Expert Witness, preparing submissions and presenting evidence regarding the ecological values of land proposed for a sand mine at Gerroa.

Independent Reviewer, undertaking a scientific and practical review of NPWS Threatened Species Survey and Assessment Guidelines and Regional Biodiversity Survey and Assessment Guidelines.

Senior Ecologist, preparing a discussion paper aimed at providing an ecological basis for the compensation of edge effects associated with highway development for input into the RTA compensatory habitat policy.

MEMORANDUM - IMPERIAL OIL & GAS PTY LTD 2020-21 NORTHERN TERRITORY DRILLING PROGRAM

PREPARED FOR □ Environmental Defenders Office on behalf of Lock the Gate Alliance Ltd

PREPARED BY □ Hydro Geo Enviro Pty Ltd, Dr Ryan Vogwill, Director

DATE □ 18/05/2021

Disclaimer

"The authors do not make any warranty, guarantee or representation in this report document and/or any subject therein. The reader should evaluate and form their own view pursuant to this report document, including documents which are the subject of this review and will hold the authors harmless without limitations. The writer does not enter into any contract with the reader pursuant to this report, without limitations."

I acknowledge that I have read and prepared the following report in accordance with the NT Supreme Court Practice Direction for Expert Reports and the Expert Witness Code of Conduct.

Expert Opinion

This review is of the Environment Management Plan (EMP) for Imperial Oil & Gas 2021-2025 EP187 Work Program NT Exploration Permit. The appendices were also reviewed in part but only where issues identified in the main document required it. This review was focussed on environmental impacts (including both surface water and groundwater) as well as available biological survey data. It should also be noted that the time available for this review did not permit an exhaustive review of all appendices as well as other sources of publicly available information that may be relevant.

A number of shortcomings exist in terms of identifying and managing potential impacts. These shortcomings primarily relate to protection of surface water and groundwater, but also by inference the environment, and current/future groundwater users. The EMP states that there is no risk to groundwater or surface water systems but limited data and analysis are presented to back up this assertion. It also states that an Environmental Impact Assessment (EIA) for review by the Northern Territory Environmental Protection Authority (EPA) is not required. I disagree with this assertion based on what the EMP has (and has not) presented. In my opinion, there are risks to both surface and groundwater systems that have not been fully explored and assessed, hence an EIA is required. For a more detailed exploration of the general risk of environmental impact from hydraulic fracturing the reader is recommended to review the following review publication at a minimum.

- Vogwill R., 2017, Western Australia's Tight Gas Industry - A review of groundwater and environmental risks. Conservation Council of Western Australia.

Although this was completed in a Western Australia context the issues explored therein are relevant for the Northern Territory. Review of an Australian wide assessment of management of unconventional hydrocarbons in Australia (reference below) is also recommended.

- Lennon, L., & Evans, W. R. (2016). Governance and management of hydrogeological impacts of unconventional hydrocarbons in Australia. *Solving the Groundwater Challenges of the 21st Century*, 22, 53.

The greatest risk of impact is from surface activities (wellpad and fluid pipelines) but there are also issues relating to well integrity failure and aquifer cross contamination that are not adequately addressed by the EMP.

Assessment of surface water risks in the EMP was hampered by a lack of data to assess impact potential at both a local and regional scale. The topographic dataset used for regional flood modelling is the 25m resolution hydrologically enforced SRTM (Shuttle Radar Topography Mission). Although this is the best pre-existing dataset available it still has a number of shortcomings with respect to resolution and accuracy. It would be preferable that flood modelling be done with a Light Detection and Ranging (LiDAR) dataset, particularly for the operational project area. In the operational project area, a higher resolution and accuracy of data is required to improve the resolution and accuracy of flood modelling at both regional and local scales. The flood modelling was undertaken with suitable software (TUFLOW) but there is no available hydrological data to calibrate it against nor is any prediction of uncertainty in the modelling presented. A number of proposed wellpad sites are located close to predicted flood water extent, this is of concern given the low levels of accuracy in the regional flood modelling. There is also a need for more local scale assessment of flood risk and sheetwash erosion risk from overland flow impacting operational sites (particularly

2 | Page

holding ponds and wellpads) as the surface water management designs in the EMP are generic and not site specific to each operational site.

The EMP has a number of shortcomings with respect to protection of groundwater resources. No regional groundwater flow data has been presented to understand where groundwater is flowing from and to in all of the aquifers that are potentially impacted. Numerous receptors sensitive to these impacts exist but without a regional groundwater assessment for all aquifers, flow paths and travel times cannot be assessed, nor can a robust monitoring network be designed. Currently the only groundwater monitoring proposed is in the Gum Ridge Aquifer but monitoring of the Alluvium/surface sediment aquifer (i.e. the watertable) and other deeper potential aquifers should also be undertaken. It is important that all of the potential aquifers are assessed even if they are not currently utilised or contain potable groundwater. Sterilisation of unutilised groundwater resources due to contamination from hydraulic stimulation has occurred in other areas. Although well integrity failures and inter aquifer leakage are not certain to occur, they are possible. In other jurisdictions where widespread hydraulic fracturing has occurred, the documented well failure rates vary from 1.9 to 75 per cent, with the Marcellus Shale area well failure rate at 6.3 per cent. The current EMP does not address all possible risks to the groundwater system sufficiently in my opinion hence I do not believe it is adequate. Also, no impact assessment of the groundwater abstraction required for the proposed activities is presented although the risk of impact from this is small as the groundwater required is of a modest volume and previously licensed.

Surface water inflow and groundwater dependant ecosystems exist in the project area, so if there are unaddressed risks to surface and groundwater, these risks will propagate through to the environment. Hydraulic stimulation fluids proposed to be used contain chemicals with high levels of toxicity to aquatic organisms in particular. Aquatic biological survey data for the surface water features, including groundwater dependant ecosystems, has not been presented so it is unclear if any significant (threatened or endangered) species may be impacted. Stygofauna are not covered at all. Given that traditional owner cultural assets are often linked to water and biodiversity assets, there are unaddressed risks to cultural values also. This is another area where the risk assessment in

the EMP is not adequate.

Given that an impact risk exists, the lack of baseline data (covering surface, groundwater and biodiversity assets) to compare any future impacts to, is a concern and will hamper remediation activities. The proposed monitoring network in the EMP will not be able to detect all of the potential impacts which could occur. Impacts could also occur beyond the operational life of the project but management activities (monitoring) appear limited to the operational life of the project.

Lincoln, Julie – Tuesday, 11 May 2021 – 12:19:35

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Julie Lincoln
Sent	11/05/2021 12:19:35 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are

only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Julie Lincoln

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Debi Lockett

Lowry, Kevin – Tuesday, 11 May 2021 – 15:07:59

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Kevin Lowry
Sent	11/05/2021 3:07:59 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Kevin Lowry

Lynch, Yvonne – Monday, 17 May 2021 – 21:25:44

Subject	Fracking NT environmental and water contamination risk objection to Imperial 2021-2025 EP187 Work Program EMP
From	Yvonne Lynch
Sent	17/05/2021 9:25:44 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Yvonne Lynch

Lyons, Mick – Tuesday, 11 May 2021 – 15:16:50

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Mick Lyons
Sent	11/05/2021 3:16:50 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Mick Lyons

Mahaffey, Leeanne – Tuesday, 11 May 2021 – 19:23:00

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Leeanne Mahaffey
Sent	11/05/2021 7:23:00 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

leeanne mahaffey

Main, Kaye – Tuesday, 11 May 2021 – 18:43:29

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Kaye Main
Sent	11/05/2021 6:43:29 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

I am concerned that our place of regular holidays will become unsafe to visit. I feel very apprehensive about the lives of the residents permanently in the areas involved.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Charlotte Mardling

Marinkovic, Marlene – Tuesday, 11 May 2021 – 15:04:39

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Marlene Marinkovic
Sent	11/05/2021 3:04:39 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Andrew Marsh

Marshall, David – Tuesday, 11 May 2021 – 15:23:31

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	David Marshall
Sent	11/05/2021 3:23:31 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Theresa Martin

Mason, Annette – Monday, 24 May 2021 – 11:08:46

Subject	Outrageous Intention to Frack before baseline studies are even completed impels me to make a strong ?? objection to Imperial 2021-2025 EP187 Work Program EMP
From	Annette Mason
Sent	24/05/2021 11:08:46 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

I'm absolutely horrified outraged and terrified of the consequences of this practice to the environment and feel so strongly about this proposal I'd even consider going to a rally if need be.....it simply cannot go ahead as the studies are not complete and to do so shows a recklessness and disregard for both people and the environment that is not acceptable!!

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Mason, Michelle – Wednesday, 12 May 2021 – 19:12:44

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Michelle Mason
Sent	12/05/2021 7:12:44 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Michelle Mason

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

And it is a waste of resources and money as renewable clean energies, now here in Australia, are cheaper and cleaner than any fossil fuels, which means less human deaths from pollution and significantly safer by conserving our environments and all life elements there on.

Yours sincerely,

Julia Mateljan

Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Veronique` Mayne

Mazga, Nicole – Wednesday, 19 May 2021 – 10:08:42

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Nicole Mazga
Sent	19/05/2021 10:08:42 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Nicole Mazga

Mcauliffe, Patricia – Tuesday, 11 May 2021 – 16:09:21

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Patricia Mcauliffe
Sent	11/05/2021 4:09:21 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

As a mother and grandparent, I wish to see a liveable planet for the future for them.

As a nation we should not be allowing taxpayer funds to prop up the fossil fuel industry, and in particular gas fracking. I have looked at many scientific papers on this industry over many years. It has an appalling record of polluting our land water and air, whilst at the same time subsidising them in many ways. Please listen to and care about the communities that will be so adversely affected.

I am writing to especially express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Georgia McClanachan

Mcdonald, Jean – Wednesday, 19 May 2021 – 12:30:53

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jean Mcdonald
Sent	19/05/2021 12:30:53 PM

Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

Dear Ministers and Dr Ritchie

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts.

I am concerned that this fracking program is not receiving the regulatory scrutiny it warrants.

Also, I am distressed that safeguards that should be in place prior to any NT fracking as discussed in the Pepper report consultations seem to be being watered down or sidelined. Yet community members who attended consultation sessions were assured that the project would only ever go ahead under the most rigorous of environmental safety conditions.

To make matters worse, this particular project is not one that should be lightly regulated; this project brings enormous threats to the Territory environment with potential to damage it forever.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, by independent scientists, including expert hydrologists, with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I am particularly concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity.

Groundwater baseline testing and studies of aquifer connectivity must be completed - this information is vital to understanding the impact of drilling, and it was promised during

community consultations. The new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

There are other risks to Territorians and tourists. This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition - my abhorrence - towards any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

Please do not use public money, taxpayers' money, to support a project so disadvantageous to Territorians (particularly to Indigenous Territorians)!

At the very least, this fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Jean McDonald

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Malcolm Mcfarlane

Mcintyre, Heather – Wednesday, 19 May 2021 – 19:01:40

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Heather McIntyre
Sent	19/05/2021 7:01:40 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

This email was sent by Heather McIntyre via Do Gooder, a website that allows people to contact you regarding issues they consider important. Mckay, Allan – Tuesday, 11 May 2021 – 13:41:47

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Allan Mckay
Sent	11/05/2021 1:41:47 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

Learnings from previous projects:

Experience in southern Queensland would indicate that this proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. The environmental destruction and impacts from gas projects on farmers and rural land use in southern Queensland has been nothing short of catastrophic. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

The need for a full environmental impact assessment:

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

Climate change considerations:

It is critical to document the projects total emissions during construction and operation, an impact that has national and global implications when the world is struggling to reach zero emissions under international obligations.

Wet tropics considerations:

It is critical to detail the implications of such a project in an area which experiences extraordinary wet season weather flooding events.

Potential for permanent damage to existing natural environments:

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

Impacts of necessary land clearing:

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Contamination of bore water:

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

Contamination of groundwater:

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

Heavy vehicle impacts:

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

Movement of contaminating materials:

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Transparency:

A major concern is that many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Government funding:

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Allan McKay

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Annette McKinley

Mckinley, Maxine – Tuesday, 11 May 2021 – 12:03:58

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Maxine Mckinley
Sent	11/05/2021 12:03:58 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Maxine McKinley

Mckinnon, Claire – Tuesday, 18 May 2021 – 16:34:44

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Claire Mckinnon
Sent	18/05/2021 4:34:44 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Further, in a time when we need to urgently act to limit the impacts of climate change, we cannot afford to continue developing new oil and gas projects.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Megan McMurchy

Mcmurray, Anne – Tuesday, 11 May 2021 – 14:07:25

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Anne McMurray
Sent	11/05/2021 2:07:25 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. Mcphee, Bernadette – Tuesday, 11 May 2021 – 20:23:39

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Bernadette Mcphee
Sent	11/05/2021 8:23:39 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

On behalf of my family of 7, and many communities objecting to FOSSIL FUELS, I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Bernadette McPhee

Mcqueen, Bruce – Wednesday, 12 May 2021 – 23:37:06

Subject	My strong objection to Imperial 2021-2025 EP187 Work Program EMP.
From	Bruce Mcqueen
Sent	12/05/2021 11:37:06 PM

Dear Minister Lawler, Minister Sussan Ley and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm greatly concerned that this fracking program is not receiving the regulatory scrutiny it warrants.

The scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive weed species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave any room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm extremely concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Bruce McQueen

Mcrae, Patti – Wednesday, 12 May 2021 – 06:22:07

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Patti Mcrae
Sent	12/05/2021 6:22:07 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Eric Meijer

Melasti, Trish – Tuesday, 11 May 2021 – 13:12:27

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Trish Melasti
Sent	11/05/2021 1:12:27 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

Lock The Gate have said everything I want to say below, but I want to emphasise how important our precious groundwater and aboveground environment is to me. Empire Energy has omitted several vitally important facets of their proposal, not least repatriation of the site once it is no longer operating. Empire is a rookie. They want to commence before baseline groundwater studies are complete! How is this possible? Do we care so little for the impact of seven new fracking wells on the NT environment that we're prepared to just 'overlook' factors of critical importance.

I beg you, at the very least, to delay commencement until adequate studies have been completed and submitted.

Thank you.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Glen Merit
Sent	17/05/2021 9:01:17 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Glen Merit

Merry, Mid – Wednesday, 12 May 2021 – 08:30:51

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Mid Merry
Sent	12/05/2021 8:30:51 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Brian Miller

Mills, A – Tuesday, 11 May 2021 – 17:19:18

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	A Mills
Sent	11/05/2021 5:19:18 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Mitchell, Ian – Tuesday, 11 May 2021 – 19:04:33

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ian Mitchell
Sent	11/05/2021 7:04:33 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Ian Mitchell

Mitchell, Jan – Wednesday, 12 May 2021 – 06:42:21

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jan Mitchell
Sent	12/05/2021 6:42:21 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Rowan Montgomery

Moore, Elizabeth – Monday, 17 May 2021 – 20:08:38

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Elizabeth Moore
Sent	17/05/2021 8:08:38 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Walter Moreno

Morgan, Bob – Tuesday, 11 May 2021 – 17:17:08

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Bob Morgan
Sent	11/05/2021 5:17:08 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Morison, Robert – Tuesday, 11 May 2021 – 12:16:40

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Robert Morison
Sent	11/05/2021 12:16:40 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

China have started scaling back their gas imports from Australia, and in the light of recent Federal Government antagonisms this can expect to be enlarged. Other countries, particularly Japan and Taiwan have set targets for carbon emission reduction and will also decrease their reliance on Australian gas (and coal).

To approve carbon mining of any kind in a time when the World is swinging to renewables, is insanity and a recipe for stranded assets.

I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment, and some common sense.

Yours sincerely,

Robert Morison

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Elli Morris

Moser, Irene – Tuesday, 11 May 2021 – 14:50:17

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP - No fracking, anywhere!
From	Irene Moser
Sent	11/05/2021 2:50:17 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Irene Moser

Munro, Paul – Tuesday, 11 May 2021 – 16:00:35

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Paul Munro
Sent	11/05/2021 4:00:35 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

The more I read and hear about plans in Australia for development of new LNG and fossil fuel resources in the teeth of compelling countervailing scientific, empirical experience and longer term economic rationality, the more I despair of the quality of our collective leadership. Please listen long enough to slow our rush to stay with the slowest most self interested cabal of mining industry privateers and exploiters for short term gains..

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Paul Munro

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Trish Murray
Sent	11/05/2021 3:07:37 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Trish Murray

Muscara, Rocco – Tuesday, 11 May 2021 – 18:25:29

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Rocco Muscara
Sent	11/05/2021 6:25:29 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

From	Paula Nadas
Sent	11/05/2021 1:47:12 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

STOP WASTING AUSTRALIAN TAX PAYERS \$.

THE USA FRACKERS HAVE BORROWED OVER A TRILLION \$ TO DESTROY THE ENVIRONMENT FOR A ROI OF A FEW BILLION.

STOP REPEATING USA MISTAKES. LEARN FROM THEM. WE ARE BETTER OFF IMPORTING OIL FROM RUSSIA LIKE THE USA DOES UNTIL WE CAN CREATE A GREEN REVOLUTION HERE.

TRY INVESTMENT IN GREEN ONLY ENERGY. THAT WAY WE CAN LOOK AFTER OUR FUTURE INSTEAD OF KILLING OUR CHILDREN AND POISONING OUR COUNTRY.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Claudia Nankervis

Nanshe, Barbara – Monday, 17 May 2021 – 10:55:08

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Barbara Nanshe
Sent	17/05/2021 10:55:08 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

john neilson

Newman, Yolanda – Tuesday, 11 May 2021 – 12:14:12

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Yolanda Newman
Sent	11/05/2021 12:14:12 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

I strongly urge you to make a decision which protects the natural environment as a priority.

Yours sincerely,

Yolanda Newman

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jennifer Newsome
Sent	12/05/2021 8:33:36 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Jennifer Newsome

Noble, Jennifer – Thursday, 13 May 2021 – 12:40:44

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jennifer Noble
Sent	13/05/2021 12:40:44 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Noble, Mary – Wednesday, 19 May 2021 – 12:00:29

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Mary Noble
Sent	19/05/2021 12:00:29 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Mary Noble

Nolan, Catherine – Tuesday, 11 May 2021 – 16:35:46

Subject	Absolute, point-blank objection to Imperial 2021-2025 EP187 Work Program EMP
From	Catherine Nolan
Sent	11/05/2021 4:35:46 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my dismay regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny demanded by the damage to the environment that it will cause.

The scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum safe distance permitted, and leaves little room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

As always with projects of this nature, the impacts on groundwater quality are of major concern. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may well put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

What could go wrong with the transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway? Excuse the sarcasm and please fill in the blanks from the many environmental reports you have no doubt commissioned and pored over to do your due diligence on this ill-advised project. Also, the proposed works area is in close proximity to the Limmen Bight River,

which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Unfortunately, many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

I strongly oppose any Territory or Federal government funding being issued to Imperial/Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Catherine Nolan

Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Sharon Northage

Northey, Robert – Tuesday, 11 May 2021 – 12:56:36

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Robert Northey
Sent	11/05/2021 12:56:36 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Submission

**Imperial Oil & Gas Pty Ltd (“Imperial”):
Environment Management Plan 2021-2025
EP187 Work Program NT Exploration Permit
 (“Imperial EMP”)**

NURRDALINJI NATIVE TITLE ABORIGINAL CORPORATION

ICN 9392

chair@nurrdalinji.org.au

DEPWS Petroleum Operations unit
PO Box 3675
Darwin NT 0801

By email: imperial.ep187@nt.gov.au

Introduction: Nurrdalinji Native Title Aboriginal Corporation

1. Thank you for the opportunity to make these comments.
2. Nurrdalinji Native Title Aboriginal Corporation (Nurrdalinji) was established to give effect to decisions made by native title holders of the Beetaloo Sub-basin/ Barkly regions, Northern Territory, in September 2020. Nurrdalinji was registered with the Office of the Registrar of Indigenous Corporations on 9 October 2020. Our name “Nurrdalinji” is an Alawa language word meaning “mixed tribe”, which reflects the fact that our membership is drawn from a wide area and several different language groups.
3. Nurrdalinji is an important vehicle for us to express our concerns and to protect the interests of our members and native title holders in the Beetaloo Sub-basin/ Barkly region generally. We formed Nurrdalinji to act as a clear and faithful voice for native title holders frustrated by the quality and adequacy of the Northern Land Council’s (NLC) advice and representation of our interests, most recently in relation to fracking on our country.
4. Our members have native title and traditional interests across the Beetaloo Sub-basin/ Barkly region, including in the area of Exploration Permit 187, held by Imperial Oil & Gas Pty Ltd.

Lack of Consultation and Informed Consent

5. Our people have had little if any engagement with Imperial about its plans to frack our country. There is widespread confusion and concern among native title holders about what Imperial is planning to do, what the risks are and even how Imperial even obtained consent to frack our country in the first place.

6. On the single occasion that Empire attended a meeting with some of us in Borroloola, we made it clear that Imperial is not welcome to frack our country.
7. Imperial claims that it has “established and continues mutually beneficial relationships with the stakeholder groups. Imperial endeavours to generate positive economic and social benefits for and in partnership with the communities”: Imperial EMP, p.15.
8. Contrary to Imperial’s claim, there is no partnership between Imperial and our people. Imperial does not deal with us. Instead it deals with the NLC without our knowledge or involvement.
9. Imperial claims that “all [its] engagement processes involved "Information, consultation, involvement, collaboration and empowerment" of relevant stakeholders to achieve the best outcome for both parties”: Imperial EMP, pp.15, 125.
10. Imperial’s claim is not true. Nurrdalinji members with native title interests in the area of Imperial’s EP 187 have not been involved in “information, consultation, collaboration and empowerment”. Instead, it is our very disempowerment that forces us to speak through Nurrdalinji.
11. Imperial claims that by engaging with NLC it has satisfied its stakeholder consultation obligations:

“Key relevant stakeholder groups include...Northern Land Council as the representative and agent of traditional Aboriginal owners in accordance with the Aboriginal Land Rights (Northern Territory) Act 1976 (Cth), whose functions in accordance with section 23 of the Act include ascertaining and expressing the wishes and opinions of Aboriginals living in the area as to the management of the land, to protect the interests of traditional Aboriginal owners and to consult with traditional Aboriginal owners with respect to any proposal relating to the use of that land”: Imperial EMP, pp 15, 125.
12. The NLC is not a stakeholder for our native title purposes. The native title holders affected by EP 187 are the stakeholders, not the NLC. The NLC is merely the representative of the native title holders for the time being, and should only act in accordance with our informed instructions. That is not happening. NLC is not keeping native title holders adequately informed of Imperial’s plans.
13. Imperial has not engaged with affected native title holders in the way that it claims to deal with stakeholders.
14. Imperial has not even acknowledged the existence of native title holders in the area of its EP 187.

15. If Imperial's EMP is approved, it will have been approved without any meaningful consultation with or involvement of affected native title holders.

Concerns about Fracking

16. Our concerns about fracking are not new.
17. When the Pepper Inquiry asked us how we feel about fracking some years ago, most of us said we opposed it. None of the information we have received since then had allayed our concerns about fracking, yet now it is permitted again.
18. When the Federal Energy Minister Angus Taylor visited in October 2020 to inspect Empire Energy's test drilling program at its Carpentaria-1 site, about 85km from Borrooloola, the following comments were made. Peggy Mawson is a Traditional Owner for the area where Empire Energy has drilled and plans to frack. She said, "We call that site where the company is drilling Paradise Pool or Karranjini. It is a mermaid dreaming. I got a shock when I drove past the site recently and saw all the trucks lined up carrying chemicals and drilling equipment waiting to destroy our country. I'm the Mihirringi for that dreaming, the boss lady for that site. Nobody from the government or the company came and asked me for permission to do the fracking there. We want the minister and the whole country to know that the Traditional Owners and the community here do not agree for fracking to go ahead in the McArthur Basin. We all share the water here and we are so worried about what will happen if fracking poisons our water and kills our dreaming."
- Fellow Traditional Owner Robert O'Keefe said, "I'm a senior Traditional Owner for that area Paradise Pool. "We told them that fracking mob when they came to the community that we don't want fracking in that Balbarini area. "It would destroy our land and water. There's a lot of sacred sites in that area and a lot of dreaming story. "They did a trick on us when they had a meeting, saying we signed for fracking when we just signed to say we were at the meeting not to agree to fracking. "They don't have permission from us."We want them to stop. It's really important for us that they don't go there."
19. We know from our brothers and sisters in Queensland and elsewhere that fracking is a dirty and intrusive business which could poison our country and the life that it supports. All of us bear the risks of fracking, yet companies like Imperial, as well as NLC, seem to try to minimise the number of people who are consulted about fracking. They only want to talk about economic benefits, not risks. Yes, many of us are poor, but fracking is not the answer to our poverty. Fracking companies and NLC should not use our poverty as a justification to put us, our land and our waters at risk.
20. We have also heard that one of Imperial's intended locations for a wellpad is in close proximity to a water bore. We understand that environmental studies are yet to be conducted around

Imperial EP areas and at this time the possible risks and impacts to the water systems have not been identified.

21. We have a deep understanding of how everything, including the water systems, are connected, and we know how the systems work on Country. As we have not been consulted appropriately by Imperial, we have not been able to address this or engage in any meaningful consultation about our concerns relating to how this wellpad may impact the water bore and connected water systems.

Conclusion

22. For these reasons, we urge the Northern Territory Government to listen to the people and refuse to approve Imperial's EMP.
23. We seek your Government's support to change the sham Top End (Default) PBC arrangements that enable native title holders' "agents" and "representatives" to lock us into arrangements that we don't want.
24. We seek your Government's help as a matter of urgency, to ensure sacred sites in the region are mapped and protected.

.....

Nurrdalinji Chairperson

O'Keefe, Susan – Tuesday, 11 May 2021 – 21:26:35

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Susan O'Keefe
Sent	11/05/2021 9:26:35 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Mignon Bonwick OAM

O'byrne, Mary – Tuesday, 11 May 2021 – 12:55:02

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Mary O'byrne
Sent	11/05/2021 12:55:02 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk. Water is a far more important & vital commodity in this Nation & must be protected at all costs.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers which include caravans & Motor homes and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk, especially those Australians the Government is encouraging to travel, tour & spend locally!!

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

O'donnell, Anthony – Tuesday, 11 May 2021 – 16:34:03

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Anthony O'donnell
Sent	11/05/2021 4:34:03 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

Can you please explain to me how any new gas wells are compatible with the aim of reaching our aim to reduce green house gas emissions to a level that is sustainable for our future. Any new fracking is a rejection of this aim apart from the damage that will be done to ground water and the immediate environment.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

Sent	11/05/2021 3:59:11 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister.

This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Dereka Ogden

Oke, Marion – Tuesday, 11 May 2021 – 21:13:23

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Marion Oke
Sent	11/05/2021 9:13:23 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. Omara, Trevor – Tuesday, 11 May 2021 – 12:15:07

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Trevor Omara
Sent	11/05/2021 12:15:07 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Trevor Omara

O'patonga, George – Monday, 10 May 2021 – 22:29:49

Subject	2020-21 Northern Territory Drilling Program
From	George O'patonga
Sent	10/05/2021 10:29:49 PM

After donating \$25,000 each to both the ALP and the CLP, Empire Energy is now seeking to capitalize on a taxpayer-funded cash-grab of up to \$22.5 million from the Federal Government.

Geez - that doesn't reek from the stench of corruption of due process and undue influence does it?

I am under no illusions that this or any other objection will change things, but at least now you - whoever reads this email - will know that we know. What you do about that is up to you.

Good luck!

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Jennifer Orsi

Ortega, Leonardo – Wednesday, 19 May 2021 – 10:50:15

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Leonardo Ortega
Sent	19/05/2021 10:50:15 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Otis, Nancy – Tuesday, 18 May 2021 – 21:28:05

Subject	Objection to Imperial 2021-2025 EP187 Environmental Management Plan
From	Nancy Otis
Sent	18/05/2021 9:28:05 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

This management plan is very inadequate!

The Northern Territory Government is assessing plans by fracking company Empire Energy to frack seven new wells. As you are aware, the seven new wells proposed by the fracking company Empire Energy constitute the biggest shale fracking enterprise ever proposed in the NT. The fracking field would threaten nearby water supplies and risk the creation of a scarred and degraded landscape. The proposed environmental management plan does not address the scale of potential damage.

Agricultural businesses and cattle stations would be adversely affected, as would the traditional lands of many Aboriginal groups, including the Jawoyn, Alawa, Jingili and Walmanpa. Remote Aboriginal communities and sacred underground water sites risk serious disruption.

Fracking involves the use of toxic chemicals and is estimated to require 50-60 million litres of water per fractured gas well.

It is unclear where this water will come from nor the impact on ground and surface water systems. Contamination case from the Beetaloo Sub-basin could spread to the interconnected Katherine Daly River systems as well as the Roper River.

The proposed environmental management plan does not begin to address the scale of potential damage. Please require a much more stringent environmental management plan, which includes strict measures for accountability.

Yours sincerely,
Nancy Otis

Ozanne, Eugene – Thursday, 13 May 2021 – 15:37:26

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Eugene Ozanne
Sent	13/05/2021 3:37:26 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Eugene Ozanne

Parker, Helen – Tuesday, 11 May 2021 – 16:08:48

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Helen Parker
Sent	11/05/2021 4:08:48 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Helen Parker

Parkin, Melinda – Thursday, 13 May 2021 – 03:29:44

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Melinda Parkin
Sent	13/05/2021 3:29:44 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I wish to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts especially upon water. I'm concerned this fracking program is not receiving adequate regulatory scrutiny.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks. I see a train wreck coming and as a taxpayer will be enraged at the ballot box!

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Paterson, Lee – Tuesday, 11 May 2021 – 12:54:38

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Lee Paterson
Sent	11/05/2021 12:54:38 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Lee Paterson

Patterson, Sandi – Wednesday, 12 May 2021 – 18:26:31

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Sandi Patterson
Sent	12/05/2021 6:26:31 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This land is precious country with no regard for traditional owners of the land and their land management processes and needs. Water is a precious resource we can never get back once destroyed by fracking.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Sandi Patterson

Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Merry Pearson

Peart, Anna – Tuesday, 11 May 2021 – 13:15:26

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Anna Peart
Sent	11/05/2021 1:15:26 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Portia Peterkin

Peters, Robyn – Tuesday, 11 May 2021 – 19:49:44

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Robyn Peters
Sent	11/05/2021 7:49:44 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Sam Phelan

Pickering, Katy – Tuesday, 11 May 2021 – 12:03:08

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Katy Pickering
Sent	11/05/2021 12:03:08 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Katy Pickering

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am so upset I am impelled to write to you. AS elected representatives of all Australians, you should be creating the conditions that will best enable our future living conditions on this planet. With the current climate and biodiversity emergencies, there is NO room for any more gas, of any kind.

The proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. Additionally, I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

There are so many other threats to so many aspects of the environment - it is impossible to understand why you are even considering this.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be stopped. It is that simple.

Yours sincerely,

Caroline Pidcock

Pidcock, Christel – Tuesday, 11 May 2021 – 13:38:20

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Christel Pidcock
Sent	11/05/2021 1:38:20 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Christel Pidcock

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Jordan Poils

Pollard, Jane – Wednesday, 12 May 2021 – 11:10:38

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jane Pollard
Sent	12/05/2021 11:10:38 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Catherine Potter

Primrose, Sybil – Tuesday, 11 May 2021 – 12:46:50

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Sybil Primrose
Sent	11/05/2021 12:46:50 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Sybil Primrose

Purves, Ray – Tuesday, 11 May 2021 – 19:56:15

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ray Purves
Sent	11/05/2021 7:56:15 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Ray Purves

Rafferty, Sam – Wednesday, 12 May 2021 – 12:13:00

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Sam Rafferty
Sent	12/05/2021 12:13:00 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Sam Rafferty

Rainow, Danila – Wednesday, 19 May 2021 – 16:07:53

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Danila Rainow
Sent	19/05/2021 4:07:53 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Tracy Randall
Sent	11/05/2021 1:40:40 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Tracy Randall

Rasmussen, Neil – Tuesday, 11 May 2021 – 20:38:28

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Neil Rasmussen
Sent	11/05/2021 8:38:28 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Anthony Redmond
Sent	11/05/2021 6:10:00 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

You will probably be getting lots of letters like this, so I won't bother changing the text below - you already know it off by heart I'm sure.

Just a question; Why is the Coalition shuffling sideways, allowing projects like this, instead of being the leaders for the future that you claim to be? The lifetime for fossil fuels is perhaps no longer than your own lifetime. Be brave.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Janette Reedman

Rees, Judy – Tuesday, 11 May 2021 – 17:15:34

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Judy Rees
Sent	11/05/2021 5:15:34 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Emily Reuter

Rich, Elliot – Thursday, 13 May 2021 – 16:08:25

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Elliat Rich
Sent	13/05/2021 4:08:25 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

The email below may have been written before but it accurately expresses my strong concerns. I hope that you and others within your party are able to find a way to protect the people, flora and fauna from this dangerous extraction process.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.
