I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk.

The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Elliat Rich

Richards, Janice – Tuesday, 11 May 2021 – 12:06:51

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Janice Richards
Sent	11/05/2021 12:06:51 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Robert Rimmer

Rippe, Melinda – Tuesday, 11 May 2021 – 12:25:54

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Melinda Rippe
Sent	11/05/2021 12:25:54 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Wayne Robenn

Dual submission

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Tony Robertson
Sent	12/05/2021 1:30:04 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Tony Robertson

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Daniel Robins
Sent	12/05/2021 11:03:00 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Daniel Robins

Robins, Malcolm – Tuesday, 18 May 2021 – 20:59:54

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Malcolm Robins
Sent	18/05/2021 8:59:54 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I wish to express my extreme concern regarding the inadequacy of Environmental Management Plan EP187 submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for up to seven new fracking wells in the Northern Territory will have significant and unacceptable combined environmental impacts and I'm concerned that it is not receiving the regulatory scrutiny it warrants.

The scale of this project is beyond the scope of the NT EMP process. This project should be competently assessed at the Federal level, including detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes up to 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying potentially toxic waste fluid between fracking sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase probability of predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not provide room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing until studies of aquifer connectivity has been completed. These new stygofauna species could be crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule will coincide with peak tourism season. Potential adverse economic impacts and road safety issues have not been adequately considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

Transport of fracking chemicals, potentially radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a significant contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is consequently

risk of fluids spilt during storage and transport flowing into and contaminating the Limmen Bight.

Many essential details regarding well integrity, well construction and materials used, and what steps Empire Energy would take to mitigate the risk of well degradation or failure will only be detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This proposed fracking project must be subject to a full and transparent Federal assessment process Territory Environmental Impact Assessment.

Yours sincerely,
Malcolm Robins

Roden, Janet – Tuesday, 11 May 2021 – 17:18:05

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Janet Roden
Sent	11/05/2021 5:18:05 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This outrageous proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. This is land we will never get back its really important land and so are the creeks...but they will become heavily polluted, especially as pipelines and tracks will be constructed beside, as well as over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. Once again this is land that will be lost by denudation. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

This section is where RISK begins and does not end:

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

to add fuel to the fire my concern also extends to impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. What a ridiculous idea to undertake fracking activities which will put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Dr Janet Roden

Comments: In 2018, In a letter to some of it's primary stakeholders, Empire energy rightly referenced the formidable Pepper Inquiry (ASX Announcement, 27 May). It specifically refers to one of the key recommendations of the report, implementing 'Reserved Blocks'- areas that are deemed unsuitable for fracking. The letter rightfully engages with this recommendation, explaining how and why Empire's 187 tenement does not contain any 'reserved blocks'. What the letter does not do, however, is acknowledge or honor the other 100+ recommendations of the Pepper Inquiry. How can a legitimate organisation feign respect for scientific integrity in such a way? This is disappointing, and doesn't make a community trust the activities of an organisation. It doesn't take much research to look wider and see how this project outright rejects the Pepper Inquiry, for example: The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination. Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. Finally, the fact that details of the Environmental Management Plan haven't gone public only further entrenches the mistrust between communities and these companies. How are we supposed to know what they are really doing? I strongly oppose this project, and my community does too.

NORTHERN TERRITORY OPERATIONS UPDATE

Empire Energy Group Limited (“Empire” or the “Company”) is pleased to provide shareholders an update on its Northern Territory operations.

EP187 2019 2D SEISMIC PROGRAM

Empire recently submitted its revised EP187 2D Seismic Environment Management Plan (“EMP”) for Northern Territory Government assessment.

EMPs are the key regulatory approval requests for upstream oil and gas work program activity in the Northern Territory.

The revised EMP has been submitted in accordance with the new regulations implemented by the Northern Territory Government earlier this year.

Empire anticipates that the submitted EMP will be accepted for formal assessment in the coming weeks.

Subject to regulatory approvals, Empire will mobilise a seismic crew into the area in Q3 2019. The seismic acquisition phase will be approximately 3 weeks, followed by processing and interpretation of approximately 2 months.

Empire has sought tenders from several seismic companies. The total cost of the program, including acquisition, processing and interpretation, is expected to be ~A\$1,300,000 – A\$1,500,000. The seismic program is fully funded from existing cash reserves.

The seismic program will provide valuable technical information including the thickness, depth and lateral extent of petroleum bearing formations including the Velkerri Shale within EP187 which will inform prospective resource volumetrics and future exploration drilling locations.

BEETALOO AND MCARTHUR BASIN MAJOR WORK PROGRAMS

Following a period of regulatory implementation which commenced after the Northern Territory Government announced that the fracking moratorium would be lifted in April 2018, major operators are well advanced in preparations to recommence industry activity in the second half of 2019.

Santos' major focus area for appraisal activities is its EP161 tenement located immediately adjacent and to the West of Empire's EP187 tenement. Seismic data available on open file has been analysed by Empire and it demonstrates that the Velkerri Shale extends from Santos' tenement into Empire's tenement at depths and thicknesses which are suitable for petroleum development. Consequently, Santos' appraisal activities will directly inform the potential of EP187.

Further, Empire's 2019 EP187 2D seismic program will demonstrate the extension of the Velkerri Shale and other prospective petroleum formations into EP187.

In April 2019, the Northern Territory Department of Environment and Natural Resources ("DENR") announced that it had accepted Santos' EP161 2019 drilling Environment Management Plan for assessment. The Santos EMP contemplates the drilling of 2 horizontal wells in 2019 which will test the Velkerri Shale. One of the wells, Inacumba-1, will be in close proximity (approximately 30 km) to EP187.

In a 2019 First Quarter Activities Report, Santos stated that it was on track to commence drilling the first well of the program in Q3 2019.

In May 2019, DENR announced that it had accepted an EMP submitted by Origin Energy for the drilling and hydraulic stimulation of a well to test the liquids-rich Kyalla Formation for assessment.

Origin has indicated that this well would be the first well in a two well program planned for 2019. The second well will target the liquids-rich portion of the Velkerri Shale as detailed in Origin's March 2019 Quarterly Production Report.

Both Santos and Origin's 2019 drilling programs will be of direct value to Empire by demonstrating the production potential of the shale formations of the world class Beetaloo and McArthur Basins.

NORTHERN TERRITORY REGULATORY IMPLEMENTATION

When the Northern Territory Government announced that it would lift the fracking moratorium in April 2018, it accepted all 135 recommendations of the Independent Scientific Inquiry into Hydraulic Fracturing in the Northern Territory ("the Inquiry").

The recommendations are being implemented in a staged manner in order to facilitate the recommencement of industry activities in 2019 (such as seismic in Empire's EP187 tenement and the drilling and fracture stimulation of horizontal wells in Origin and Santos' tenements). Further regulatory implementation is ongoing.

One of the recommendations of the Inquiry was to implement Reserved Blocks, which are areas deemed by the Inquiry to be inconsistent with petroleum exploration.

Such areas detailed in the Final Report of the Inquiry include towns, areas of high ecological and cultural significance (“Sites of Cultural Significance” or “SOCS”), Indigenous Protected Areas (“IPAs”) and National Parks.

The Northern Territory Government has released a consultation paper for public comment which contains areas of proposed Reserved Blocks. No final decisions regarding the implementation of Reserved Blocks have been made by the Northern Territory Government.

Empire’s EP187 tenement does not contain any proposed Reserved Blocks and as such exploration activities are expected to progress on schedule. EP187 is the principal focus of Empire’s near term work programs as detailed above.

Portions of Empire’s EP184 tenement contain the Limmen National Park which has been detailed as a proposed Reserved Block. Empire has previously carried out work programs in the Limmen National Park portion of EP184 (including drilling in 2014) safely and responsibly. Empire has always complied fully with all Government regulations and approvals and Traditional Owner consents and has remediated the work program areas to a world-class standard.

Portions of Empire’s EP(A)180, EP(A)181, EP(A)182 and EP(A)183 are detailed in the Northern Territory Government consultation paper as being proposed Reserved Blocks due to being either IPAs or SOCS. The Northern Territory Government’s consultation paper specifically notes that Traditional Owners have the right of self-determination over the economic development of their land. This approach is entirely consistent with Empire’s historical approach to Traditional Owner negotiations since it was one of the first oil and gas companies to apply for petroleum tenements in the McArthur Basin in 2010. Empire respects these Traditional Owner land rights and will continue to work respectfully with Traditional Owners through the Northern Land Council to seek Traditional Owner consents.

Empire has a long and successful track record of negotiating successful standing agreements with Traditional Owners on Aboriginal Land. Since 2010, Empire has conducted 26 On Country meetings with Traditional Owners, the vast majority of whom have been supportive of Empire carrying out exploration activities. Furthermore, Empire was one of the first companies to be awarded an Exploration Permit on Aboriginal Land (EP187).

The process of consultation and negotiation regarding potential Reserved Blocks between Empire, Traditional Owners through the Northern Land Council and the Northern Territory Government is expected to take several months.

The Company will update shareholders as negotiations progress over the coming months.

ABOUT EMPIRE ENERGY GROUP LIMITED

Empire Energy is a conventional oil and natural gas producer with operations in Appalachia (New York and Pennsylvania) and the MidCon (Kansas and Oklahoma).

The Company has over 14.5 million acres in the McArthur & Beetaloo Basins, Northern Territory, both of which are considered highly prospective for large shale oil and gas resources. Work undertaken by the Company since 2010 demonstrates that the Central Trough of the McArthur Basin, of which the Company holds around 80%, is highly prospective, with key similarities to those extending through Oman, Siberia and Southern China and which contain resources of billions of barrels of oil equivalent.

Rogers, Adrian – Tuesday, 11 May 2021 – 12:07:04

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Adrian Rogers
Sent	11/05/2021 12:07:04 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Adrian Rogers

The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

greg rogers

Rogers, Wayne – Tuesday, 11 May 2021 – 12:11:40

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Wayne Rogers
Sent	11/05/2021 12:11:40 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Rookes, Ken – Wednesday, 19 May 2021 – 09:01:41

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ken Rookes
Sent	19/05/2021 9:01:41 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I shake with disbelief at the Government's insistence on the continued exploitation of fossil fuels - including gas, at this time of global ecological crisis.

The Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187 is deeply disturbing.

The thought of seven new fracking wells in the Northern Territory fills me with horror when I consider the combined environmental impacts. This fracking program is clearly not receiving the regulatory scrutiny it warrants.

The scale of this project is terrible, and beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Estelle Ross

Ross, T – Tuesday, 11 May 2021 – 12:45:02

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	T Ross
Sent	11/05/2021 12:45:02 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. Rothschild, Deb – Wednesday, 12 May 2021 – 09:57:13

Subject	Objection to EMP: Imperial 2021-2025 EP187 Work Program
From	Deb Rothschild
Sent	12/05/2021 9:57:13 AM

To Hon. Minister Lawler, Hon. Minister Sussan Ley & Independent Officer Dr David Ritchie,

I am writing in regards to the EMP submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187, for the following reasons:

- The lack of transparency, designed to hide details of well construction and operation, is in breach of the Pepper Inquiry and could lead to unacceptable risks
- Incomplete testing and studies of impacts on groundwater, flora and fauna creates unacceptable risk
- Issuing taxpayer money to fund this works program, despite Imperial/Empire Energy not releasing essential details for public viewing is unacceptable

The serious shortcomings of the NT regulatory process to date prove this project should be assessed in full by the Federal government, with the NT government involved in a full EPA.

Yours sincerely,

Deb Rothschild

Running, Jane – Friday, 14 May 2021 – 14:40:32

Subject	Are you insane. Stop Fracking Now. Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jane Running
Sent	14/05/2021 2:40:32 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

Fracking has been proven to be a very toxic and invasive way of extracting gas from the ground.

Would YOU DO IT ON YOUR OWN LAND????!!!

NO, I think not.

Your all no better than a heap of pigs with you nose in the trough.

Wake up to yourselves.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Who pays for the damage once its it's been done?...

Yours sincerely,

Jane Running

Rush, Greg – Tuesday, 11 May 2021 – 12:24:52

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Greg Rush
Sent	11/05/2021 12:24:52 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Greg Rush

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Rutledge, Margo – Wednesday, 12 May 2021 – 11:13:23

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Margo Rutledge
Sent	12/05/2021 11:13:23 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Sagar, Colin – Tuesday, 11 May 2021 – 18:44:27

Subject	Objection to Imperial 2021-2025 EP187 Work Program EMP
From	Colin Sagar
Sent	11/05/2021 6:44:27 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I acknowledge the traditional indigenous owners and custodians of the area involved below.

I hold deep concern and outrage regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This activity will exacerbate emissions of climate change inducing pollutants such as methane and CO2 and is utterly unnecessary to our energy future.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
john salmon

Samarawickrama, Asitha – Tuesday, 11 May 2021 – 11:59:31

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Asitha Samarawickrama
Sent	11/05/2021 11:59:31 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Lisa Sawtell

Summary

The Imperial Oil and Gas EMP proposal must be rejected as it is flawed on many grounds. The implications of the clear risks created by this proposal need to be identified and acted upon through a full Environmental Impact Assessment. There is precedent for this: In NSW, five wells would trigger an Environmental Impact Assessment process. The seven wells proposed create major risks and many of these are increased by amalgamation of impacts from multiple issues. The EMP is a clear example of the Exploration creep problem outlined in the Pepper Inquiry report on page 414.

The proposal must be referred for full environmental impact assessment under section 50 of the Environmental Protection act for analysis by the EPA.

The processes outlined in the EMP will put at risk a number of key aspects of the area, including the underground water systems, and poses significant risks which are amalgamated by the proposed multiple wells and pipelines. This includes concentrating chemicals and pollutants which could impact on stygofauna and drinking water in the region.

The EMP clearly breaches the principles of Ecologically Sustainable Development (ESD), which are the guiding principles of the NTG policy in relation to such developments.

There are many instances where the EMP glosses over serious issues and it cannot be seen as "fair dinkum". It is the core responsibility of the NT government to regulate this industry and to make sure the issues are dealt with properly and with appropriate risk analysis in light of the SREBA water research and the information from other similar fracking processes that have come to light since 2018 when the Pepper Inquiry ceased its investigations. The Government's role is to regulate not facilitate this industry and it is imperative that a thorough investigation is made into the water and chemical implications.

Water Risks

The release of the preliminary water study elements of the SREBA provide evidence that stygofauna are present in the Cambrian Limestone Aquifer in the Beetaloo Basin including the Gum Ridge Formation¹.

The stygofauna present in the Gum Ridge Aquifer and the Cambrian Limestone system require a much more detailed analysis before any processes that might impact on their population are undertaken.

Further, the eDNA analysis of the prawn species *Parisia unguis* shows the systems are highly connected and pollutants can move over a significant distance.

The presence of this species, ranging across a geographic distance of ~300 km, and the low genetic divergence (maximum 3.9% in COI and 3.29% in 16s RNA gene) among specimens indicate groundwater connectivity in recent times².

This EMP risks making unacceptable impacts on the Gum Ridge Aquifer through the loss of drilling fluids during drilling, spills, and well failures. Drilling fluids contain a number of toxic chemicals, including biocides that are not authorised for release into water systems.

The evidence from Table 6 - Waste management, from Appendix 6, page 15 of the Imperial EMP shows clearly that the drilling fluids they are proposing to use will contain biocides and these fluids will be treated with drilling chemicals to increase their use and avoid bacteria. These fluids will enter the environment outside the casings of the well system.

Imperial's proposal to drill and frack six wells must not be allowed to proceed as some of the drilling fluids are "lost" into the underground water systems during the drilling process.

As an example, the Well Completion Report (WCR) drilling log file for Tanumbirini ³ showed approximately **21 million litres** of these fluids were lost in the first 400 metres of the drilling process. It is completely unacceptable to allow these chemicals into aquifers where stygofauna live and people draw drinking water. Drilling 6 wells in a concentrated area could put **126 million litres** of pollutants into the local aquifers.

Biocides are very toxic chemicals to aquatic organisms. They carry warnings such as: extremely toxic to aquatic organisms, has long lasting impacts⁴. They must not be allowed to escape into ecosystems containing the newly discovered and as yet largely undescribed stygofauna.

There is no specific testing data to show just how toxic these chemicals would be to stygofauna, which is part of the reason the precautionary principle must be invoked to stop this process. Stygofauna are known to be very sensitive to chemicals and disturbance. It is probable that these chemicals will cause changes in the stygofauna assemblages and disrupt their ecosystem service function. Lethal Concentration studies must be done to clarify risks to stygofauna.

The EMP must be delayed until the research is completed and the toxicity of biocides to stygofauna is clarified. The research into these species and their functional importance in keeping water usable for human consumption and potentially stock watering must be further investigated before any activity is undertaken.

Groundwater Dependent Ecosystems (GDE)

On Page 11, the EMP simplifies and plays down the risk of the proposal to Groundwater Dependent Ecosystems. (GDE) It is clear that GDEs are present and that they contain very extensive stygofauna assemblages which perform ecosystem services such as water purification.

The EMP does not mention stygofauna and needs to be redone to address this shortcoming.

Well Operations Management Plan (WOMP)

Many of the essential details of how the wells will work are hidden within the Well Operations Management Plan (WOMP), which is not publicly accessible, supposedly due to containing commercially confidential information. This lack of public availability of details of well operation is in clear breach of the Pepper Inquiry recommendations, and is part of a proposal-wide strategy to remove critical information from public scrutiny.

Commented [1]: FOI p37 says this is accessible but not made common knowledge?

Commented [2]: SL to address FOI

These are also the shallowest wells yet to be fracked in the NT, one at just 1095 metres down. **This means that there is less distance between the fracking layer and the groundwater layer.** The WOMP or the details relevant to the EMP process must be made available for public comment.

Corrosion Overview

The preliminary water study (Rees et al⁵) confirms that sulphate-reducing bacteria (SRB) are present in the basin and colonising casings in water bores. The risks that these bacteria pose to the integrity of wells have very significant implications for the future and this needs to be factored into decision making.

It is the clear responsibility of the NT government to regulate these risks. The stated policy that decisions in relation to petroleum and gas development will be guided by the principles of Ecologically Sustainable development (ESD) make it vitally important that the longer term view is taken with regards to this and other fracking proposals in the NT. It is possible that the fracking companies will be gone from the region and the responsibility for managing the outcomes of this corrosion, if that is even possible, will fall on future NT governments and the consequences will be suffered by future generations of Territorians. The evidence from the Marcellus shale in the US shows that the problems with leaks keep growing with time and massive remediation costs are thrown back onto governments and communities.

This clearly needs to be a part of the final risk assessment mentioned in the Pepper Inquiry's recommendation 4.6. There is a massive risk of future problems created by well failures. These problems seem to be unavoidable if the wells are proceeded with. This is a clear breach of ESD principles as it creates significant problems for future generations.

Sulfate-reducing bacteria and sulphur-oxidizing bacteria (SOB) are in the Beetaloo⁶ and are a massive risk to the long term viability of wells. These bacteria instigate corrosion processes that impact on concrete and steel structures. Microbially induced concrete corrosion (MICC) caused by sulphuric acid attack is a major problem with concrete.

The Oil and Gas Industry can only control sulfate reducing bacteria (SRB) with biocides when it is on the inside of a well. The environment where SRB are present (mainly damp soil with organic material present or other bacteria which can provide a food source/or aquifers) is a natural control system until punctured by an oil and gas well. This gas or oil well, if cement coated, gives the SRB food and their numbers grow as the natural control (availability of food) is no longer constrained. As SRB "eat" the sulphates in the cement they exhaust Hydrogen Sulphate (rotten egg gas), which in the presence of water turns to acid, initiating the whole cycle starts again.

How long a well's external surface will withstand the corrosive effects of this acid before it is broken down enough to allow cross contamination of the aquifers, depends greatly upon the number of bacteria present, but we can be absolutely confident that this cross contamination will eventually occur.

⁵ Gavin Rees, Stefanie Oberprieler, Daryl Nielsen, Garth Watson, Michael Shackleton and Jenny Davis, (2020) Characterisation of the stygofauna and microbial assemblages of the Beetaloo Sub-basin, Northern Territory. GISERA project number: W18. December 2020

⁶ Gavin Rees, Stefanie Oberprieler, Daryl Nielsen, Garth Watson, Michael Shackleton and Jenny Davis, (2020) Characterisation of the stygofauna and microbial assemblages of the Beetaloo Sub-basin, Northern Territory. GISERA project number: W18. December 2020

Reports show this corrosion is already a problem in QLD coal seam gas projects⁷. Saltel Industries was approached in 2016 by one of Australia's leading natural gas producers to tailor a solution for their unusual problem: in some of their CSG wells in Queensland, the 7-inch production casing must cope with severe and localised external corrosion developing at shallow depth. These corrosion cases are suspected to be caused by bacteria growing under specific pressure and temperature environments.

Microbiologically-influenced corrosion seems to be systemic in the region, and other operators might encounter similar issues in their CSG wells. There needs to be further study of this issue in the SREBA before these wells are allowed to proceed⁸.

This information confirms that corrosion is an issue in the CSG areas of QLD and validates fears that the same process will cause wells to eventually fail in the NT, releasing injected chemicals and related material, back into the fractured rock layers, where they may mix with the hypersaline waters of the Moroak Aquifer before finding their way into surface waterways. This includes the Limmen National park waterways, the McArthur River and other flows out of the catchments in the area both above and underground.

The problem of well casing corrosion is extensive in the USA⁹. A root cause analysis of the 2015 Aliso Canyon blowout determined that surface corrosion on the outside of well casing caused by prolonged contact with groundwater and microbes, most likely methanogenic Archaea, was the underlying cause of the corrosion.

There are many examples of corrosion problems affecting infrastructure in the NT. In 1998 the Adelaide River Bridge partially collapsed due to the impact of corrosive bacteria¹⁰.

The effect of corrosive water on cementing and casing in the NT is demonstrated by deep oil exploration wells (McDills and Dakota) drilled in the Perdika/Great Artesian Basin in the 1960s (the Perdika Basin is one of the prospective unconventional shale gas areas of the NT). Now, some fifty years later, the steel casing has almost entirely corroded away, resulting in inter-aquifer contamination. These wells required expensive rehabilitation work to stem artesian flow. A single bore cost the Territory and Commonwealth Governments \$500,000 to plug (1960s prices), as the company responsible for the well was insolvent.

This example highlights the issue of operator insolvency due to the boom and bust cycles of oil and gas development which complicates efforts to hold liable parties responsible and provide for timely remediation.

¹⁰ NT News August 27th 1998

The hypersaline nature of the deep aquifers and the high temperature further raises concerns about the integrity of the wells with both deep corrosion risks and closer to surface risks. There is a major concern among stakeholders that integrity failure will connect the hypersaline deep aquifers like the Moroak to beneficial fresh water systems like the Gum Ridge aquifer. This poses a massive risk to the human and animal use of the region in the medium and long term and is clearly a breach of ESD principle of intergenerational equity.

The future risks imposed on Territorians and other economic sectors are completely inappropriate and are a clear breach of the EPBC act provisions relating to ESD and the precautionary principle. The Samuels report¹¹ clearly articulates the failures of jurisdictions such as the NT to enforce the EPBC act and its embedded principles. The NT Government espouses the ESD principles as the guiding principles in its decision making in relation to the processes around fracking yet it does not appear to be implementing these principles. The principles must be applied to the review of this EMP.

Chemical Use

Imperial's EMP must be rejected because its chemical use information is clearly inadequate. Firstly, Imperial's submission does not even provide an analysis of the chemicals to be used by the project as stated on page 2, just a general review of some.. This is woefully inadequate and the EMP needs to be updated with a real analysis. **This is a clear case of a small player cutting corners to suit their timeframes and not doing the process properly.**

The NTG must provide strong regulation on this issue as there are very significant implications and long term risks to the water systems that underpin human occupation and businesses across the region as well as environmental risk.

The analysis is also severely flawed in that it does not detail the chemicals to be actually used and makes statements like "commonly found in food and household domestic products". **This is industry propaganda and marketing spin and has no place in a technical EMP type document.** This is also irrelevant, even if it was true. Many household chemicals are poisons or have severe environmental impacts if misused.

Chemicals in fracking processes have been related to a range of environmental and health concerns and the EMP seems to gloss over these issues and what appears to be relevant information. As an example, the EMP does not show concern about 1-4 Dioxane. 1-4 Dioxane is listed in the 7th Compendium of Scientific, Medical, and Media Findings Demonstrating Risks and Harms of Fracking as a carcinogen¹²:

¹¹ Samuel, G 2020, Independent Review of the EPBC Act—Interim Report, Department of Agriculture, Water and the Environment, Canberra.

¹² Lester, Y., Ferrer, I., Thurman, E. M., Sitterley, K. A., Korak, J. A., Aiken, G., & Linden, K. G. (2015). Characterization of hydraulic fracturing flowback water in Colorado: Implications for water treatment. *Science of the Total Environment*, 512-513, 637-644. doi: 10.1016/j.scitotenv.2015.01.043

Most notable is the constituent 1,4-dioxane, a previously discovered PW component that is associated with human cancer and has been shown to be challenging to remove from the waste-stream.

Ethylene Glycol is listed as a chemical known to the State of California to cause birth defects or other reproductive harm. In animal studies it is consistently associated with adverse effects on the kidney such as crystal nephropathy.

Ulexite is known to be toxic to reproduction and may impair fertility and cause harm to the unborn child. These chemicals are dismissed as low concern yet there would appear to be much more risk than indicated, especially given the aquifers are sources of drinking water and agricultural water.

Biocides are a major risk to aquatic species, but there is no concern shown in the chemical analysis. There are many chemicals listed with high aquatic toxicity which means they have significant implications for stygofauna and the water systems from the Beetaloo through to Katherine, Roper and Flora rivers. It is vitally important that the NTG does its checking regarding these chemicals as the impacts on water, human and animal health are of great significance. If these chemicals turn up in agriculture or horticulture water supplies, they could greatly disrupt these industries.

There are many chemicals listed which carry significant warnings and are not analysed in a manner providing any confidence that they will not be a problem. The Marcellus shale area in the US has massive problems with chemicals in water and the 7th Compendium (2020)¹³ and the Pennsylvania state Grand Jury give some insight into these problems. Chemicals like endocrine disruptors, surfactants and biocides are major risks and need much more detailed and careful analysis. It is the responsibility of the NT government to make sure this analysis is done thoroughly to identify human health risks and environmental risks.

Risk Assessment

The inadequacy of the EMP is further evidenced by the reliance on Desktop Surveys to gather data for risk assessments given that **it is made clear in the Pepper Inquiry that the region can only be described as data deficient which means the desktop analysis is of little or no value for informing a risk assessment.** The SREBA research needs to be available to inform consultation and decision making before such a decision is made. **This expansion proposal must be delayed until these deficiencies are addressed.**

The Pepper Inquiry specifically mentions the issue of exploration creep on page 414:

¹³ Concerned Health Professionals of New York, & Physicians for Social Responsibility. (2020, December). Compendium of scientific, medical, and media findings demonstrating risks and harms of fracking (unconventional gas and oil extraction) (7th ed.). <http://concernedhealthny.org/compendium/>

"This is known as 'exploration creep'. Put another way, there is a real concern that the risks attendant with production could be realised if exploration is sufficiently intensive"¹⁴.

This EMP clearly needs an EIS to address the combined impacts and also to resolve the increased broader risk aspects raised by the stygofauna research and the Geological and environmental baseline assessment of the GBA region stage 2 and related Water Studies¹⁵.

The whole point of recommendation 4.6, to conduct the research currently lacking on the region and then use that information for a final risk assessment must be implemented. The EMP cannot be approved before that happens.

Emissions Policy Consistency

There are also issues with the carbon emissions and methane leakage that are completely inappropriate in the context of efforts to get climate change atmospheric gases under control. Page 75 of the EMP indicates that the proposed activities will be carried out over three years, and that the GHG emissions are approximately 77,500 tCO₂-e per year. Flaring and related activities are not appropriate from a new fossil fuel source when the IPCC is calling for no new fossil fuel deposits to be opened. There is also no information about how these will be offset and how they are compatible with the NT government's progress towards 2050 emissions targets.

The NT has already suffered significant impacts from climate change related events, including massive mangrove die-back, failed wet seasons in the Barkly region, dying trees south west of Katherine and temperature changes, to name but a few. We must move to reduce the risks of these events becoming more frequent and worse in extent.

Biodiversity Risks

The Protect Country Alliance has strong concerns regarding Imperial's plans to store wastewater fluid and toxic chemical flowback fluid in open air waste ponds. This practice directly contradicts recommendation 7.12 of the Pepper Inquiry and presents significant risks to biodiversity in the region.

First and foremost, the area concerned can only be described as data deficient in relation to biodiversity and environmental information and these inadequacies in knowledge fundamentally challenge the conclusions in the EMP. Simply conducting a desktop audit of biodiversity within the area and then assuming that there are no concerns does not reflect the data deficient basis of the systems used. This lack of information about the region's

¹⁴ Dr Alan Andersen, Dr Vaughan Beck AM, Prof Brian Priestly, Dr David Ritchie, Dr Ross Smith, Prof Peta Ashworth, Prof Barry Hart AM, Dr David Jones (2018). Final Report of the Scientific Inquiry into Hydraulic Fracturing in the Northern Territory.

¹⁵ Geological and environmental baseline assessment for the Beetaloo GBA region Geological and Bioregional Assessment: Stage 2 2020, A scientific collaboration between the Department of Agriculture, Water and the Environment, Bureau of Meteorology, CSIRO and Geoscience Australia

biodiversity holds for both land and water ecosystems throughout the region and was highlighted in the Pepper Inquiry.

It is vitally important that work be done to provide guidance around these many issues. In situations where knowledge is uncertain **the Precautionary Principle underlying our environmental legislation requires a very cautious approach.**

If companies are wishing to exploit non-renewable resources in the area, they have a responsibility to do the work required to ensure that environmental risks are 'acceptable'. Decisions based on such limited and flawed data are unacceptable and a range of on-ground work needs to be undertaken to improve the knowledge base upon which to evaluate decisions.

Open air wastewater tanks pose unacceptable risks to biodiversity

Open water storages should be not allowed in line with recommendation 7.12 of the Pepper Inquiry. To allow these pits to be constructed will lead to dramatic and unacceptable changes in biodiversity and create enormous risks that would not be present if enclosed tanks were used.

The work done on the birdlife assessment is inadequate. **Data deficient systems cannot be relied upon for desktop surveys.** This is especially the case where endangered species are concerned, as they are in low numbers anyway. Gouldian finches, grey falcons and crested shrike tits have all been reported in the region in recent times by bird watching groups. It is simply not good enough to rely on desktop and related techniques when dealing with an area where the Pepper Inquiry specifically said more research needed to be done to inform decision making.

The EMP shows a clear disregard for these processes with dismissal of the information. For instance, with regards to the grey falcon, the EMP claims the majority of records are from the Southern NT. This is irrelevant. The bird species is across the NT and some of the most popular sighting venues for bird watchers are the towers across the Carpentaria Highway.

See the image provided of grey falcons on a tower beside the Carpentaria highway.

The evaporation process means concentrations of chemicals and other pollutants will be increased in the open air ponds. It is impossible to prevent birds from accessing these toxic open air ponds. We do not want to discover that bird species are in the area when their dead bodies are found in an evaporation pond.

Anecdotal evidence from ongoing discussions with land holders and traditional owners in the proposed drilling area highlights the impact that a record breaking hot and dry season has had on local water and wildlife. Birds and other

wildlife are relying on limited water. If activities were to introduce bodies of open water in the area through open storage ponds, these would undoubtedly receive significant visitation from thirsty wildlife. This could poison wildlife and spread contamination.

Birds, especially honeyeaters and other species, dip bathe and drink on the wing. They would also be able to land on the slope of the liner covered banks. Most bird taxa have a gland at the base of the tail, the uropygial or preen gland. The oil it produces keeps the feathers flexible and assists the interlocking barbules to stay intact, thus forming a barrier that helps repel water and insulate the bird. In the case of waterbirds, preening oil helps them stay afloat, and without it birds may even drown.

Chemicals like surfactants can alter the efficacy of waterproofing elements in their feathers, rendering them flightless and vulnerable to predation. Birds may also die because surfactants reduce the ability of feathers to act as insulation in cold weather, and have been used in the USA to control populations of pest species (Lustick, 1976). Clearly the open water systems need to be effectively netted with small enough mesh to exclude small honeyeaters and finches.

The claim has been made that surfactants are “no more toxic than common household substances”, and are “commonly found in everyday products, from toothpaste to laxatives to detergent to ice cream” (University of Colorado, 2014). However, surfactants can be deadly for birds and frogs. This complete lack of concern for biodiversity is unacceptable especially given the biodiversity crisis highlighted by the Paris Accord of 2019.

Amphibians

The fencing around freshwater storages and all other water needs to be frog proof, and not just have wildlife ladders installed. Native burrowing frogs are likely to try to access standing water. This highlights one of the risks relating to holding polluted water in open evaporation ponds in that it is likely to attract native species who cannot detect the pollutants. This includes elements like surfactants which are not a human health issue but a massive issue for many non-human species, especially amphibians.

Low walled water storage areas, even if pumped dry, will have residues, and when rains come they will attract frog species.

There are many unknowns about this region's biodiversity. This is especially the case with endemic frogs. There is a need to determine the range of the water-holding frog *Litoria platycephala* and to determine whether the species in the McArthur/ Beetaloo area is in fact a different species.

Plastic lined pits can be death traps for many species of native frogs that do not have toe pads. Plastic pits have been used as traps for some frog species. The risk includes many of the burrowing frog fauna in the Beetaloo region. These species are likely to move to standing water bodies to breed. The pits should not be allowed, but if they are they need to be carefully designed. This elevated risk includes the period over the wet season where the pits may be emptied to avoid them overflowing. They will still collect water and become frog breeding sites, especially for burrowing frogs. Any residues remaining will cause problems. Surfactants are highly toxic to native frog tadpoles at very low concentrations.

The cane toad *Rhinella marina* is a major threat to a number of animal species, with population level declines documented (Doody 2004, 2006, 2009)¹⁶. Allowing open water storage pits will dramatically increase cane toad numbers in the region with broad biodiversity implications.

Doody (2009) concludes, " We observed population-level declines in Australian predatory lizards caused by the arrival of an invasive species, *Bufo marinus*, at two sites along the Daly River. In contrast, there were no significant declines in populations of *Crocodylus johnstoni*. *Amphibolurus gilberti* populations increased substantially, presumably due to the losses in *Varanus panoptes*, a known predator of this species. These findings indicate that the invasion of *B. marinus* into this ecosystem caused a structural change in the lizard community. Changes in the abundance and community structure of these top predators may alter species interactions, in particular patterns of predation and competition, and the energy

¹⁶ JS Doody, B Green, R Sims, D Rhind, P West, D Steer (2006). Indirect impacts of invasive cane toads (*Bufo marinus*) on nest predation in pig-nosed turtles (*Carettochelys insculpta*). *Wildlife Research*. J. S. Doody B. Green D. Rhind C. M. Castellano R. Sims T. Robinson (2009). Population-level declines in Australian predators caused by an invasive species. *Animal Conservation* Volume12, Issue 1.

dynamics of the ecosystem. Recovery from low numbers, and possibly local extinction, may depend on the control of *Bufo marinus*, and/or the recolonization from individuals from the surrounding landscape"¹⁷.

Further personal communication with the author indicates follow up surveys showed some species, like *Varanus panoptes* and *Varanus mitchelli*, are no longer present at the survey sites. Follow up work in the Kimberleys reinforced the initial findings from the NT and indicated a broader range of varanid species were impacted.

Many areas of the NT were originally thought to be too dry for cane toads to colonise but this has been shown to be incorrect. The main reason toads have been able to colonise large areas of semi-arid and arid NT is because of the use of open water storage in the cattle industry. The creation of such spaces for water and wastewater storage will enable cane toads to seek refuge and breed in the area. The local cane toad population would be massively increased if open water pits were introduced.

This is particularly destructive of varanid populations and other reptile species. Introducing standing water bodies into an area will not only cause the cane toad population to increase, but will result in cane toads breeding at the sites. This introduces a size class of cane toads into the area that would not be occurring without the water pits, which in turn causes dramatic declines and even local extinctions of smaller Varanid species and the juvenile stages of the larger Varanid species such as *V.panoptes*, *V.gouldii* and *V.mertensii*.

Species that will be impacted negatively are likely to include:

<i>Varanus acanthurus</i>	Ridge-tailed Monitor
<i>Varanus baritji</i>	Black-spotted Ridge-tailed Monitor
<i>Varanus mertensi</i>	Merten's Water Monitor
<i>Varanus mitchelli</i>	Mitchell's Water Monitor

¹⁷ J. S. Doody B. Green D. Rhind C. M. Castellano R. Sims T. Robinson (2009). Population-level declines in Australian predators caused by an invasive species. *Animal Conservation* Volume12, Issue 1.

Varanus scalaris	Spotted Tree Monitor
Varanus tristis	Black-tailed Monitor
Tiliqua scincoides	Common Blue-Tongued Lizard or potentially Centralian Bluetongue.
Varanus panoptes	Yellow Spotted Monitor
Varanus gouldii	Sand Monitor

There is also research indicating impacts on smaller lizard species due to large toad populations. In a two-year study in the Roper River region of the Northern Territory, Catling et al. (1999)¹⁸ found that high cane toad densities were associated with a significant reduction in the abundance of small lizards, possibly caused by reducing their invertebrate food supply. Like so many of these aspects of the local environment, there is a deficiency of data that should be addressed before any such changes are created in the local environment.

There are additional issues with the use of chemicals, and this puts the wastewater elements of this plan in a particularly high risk category. Surfactants and many other chemicals are especially toxic for frogs and have implications for other species such as birds. Even if the pits are emptied, there will be residues from waste water present which will most certainly impact wildlife.

Waste disposal

The issues around waste disposal are not made clear and require clarification. The use of evaporation tanks mean that the concentrations of chemicals and levels of radioactivity and other factors will be increased. The ways these issues will be scaled with the development of seven wells greatly increases the risk and needs to be studied in an EIS. It is likely that NORMS from one well will be relatively low but concentrated fluids from seven wells would greatly increase the risks of concentrations of chemicals requiring different treatment processes.

¹⁸ Catling, P.C., Hertog, A., Burt, R.J., Wombey, J.C., and Forrester, R.I. (1999). The short-term effect of cane toads (*Bufo marinus*) on native fauna in the Gulf Country of the Northern Territory. *Wildlife Research* **26**:161-185.

Social licence

The indigenous groups across the region keep repeating that they do not want fracking on their land and are concerned about the risks to water and their sacred sites¹⁹.

Aboriginal people are expressing serious concerns:

There is a lot of concern amongst Indigenous representatives across the region and the potential impacts of fracking on their culture and the local environment. Inadequate consultation with Aboriginal people from the region impacted is one core aspect of this breach²⁰. Many people express that they do not feel there has been a genuine informed discussion with them in relation to these matters. Aboriginal people in the area are indicating they do not believe they signed any consent for this exploration and there is a likelihood this will progress to court proceedings if the traditional owners are not properly consulted and respected.

Legal action against Glencore over the McArthur River Mine's issues is a relevant recent example. Much of the interference with water systems is seen as impacting on sacred sites and the related ability to enjoy the land. The mining corporation's evident disregard for indigenous views echoes the way of doing business and approaches to consultation that led to the Juukan Gorge catastrophe in WA. The EMP should not be approved until these issues are resolved.

The Pepper Inquiry heard that efforts to regulate fracking tend not to take into account the integrated nature of ecosystems and thereby conflict with Aboriginal people's responsibilities for Country, breach ESD principles, and pose risks to the physical and mental health of impacted communities. A clear example of this is the way that no-go zones and related exclusion principles do not take into account the catchment and feeder areas of springs and other groundwater dependent ecosystems, ignoring the integrated nature of the local environment and again breaching ESD principles.

Aboriginal people have a very sophisticated knowledge of water systems. Throughout consultations during the Fracking Inquiry and beyond, evidence has been put forth that fracking and the risks to water, including the volume, flows and quality posed by the fracking process are unacceptable. Local aboriginal communities frequently voice concerns and distress regarding the risks fracking poses to water and the ecosystems that depend on it. There is no social licence for these activities.

Scales, Milyika – Wednesday, 19 May 2021 – 14:50:27

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Milyika Scales
Sent	19/05/2021 2:50:27 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Milyika Scales

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Lily Schmelzle
Sent	12/05/2021 11:33:48 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Lily Schmelzle

Scotland, David – Saturday, 15 May 2021 – 19:31:09

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	David Scotland
Sent	15/05/2021 7:31:09 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

David Scotland

Comments: To Whom it may Concern, Why do you think that a short term desperate grab for fossil fuels is a good idea? When we all know that by the time it's finished it may leave permanent environmental damage, and we will then still have to develop alternative energy options. Are we happy to vandalise one of the most interesting areas of this beautiful and fascinating country for short term monetary gains? Maybe we should take a long hard look at the insanity that politicians call "Modern Economic Theory"?

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Please prevent further damage.

Yours sincerely,

Alexandra Seddon

Seiffert, Marjorie – Tuesday, 18 May 2021 – 17:17:31

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Marjorie Seiffert
Sent	18/05/2021 5:17:31 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. Settecasse, Sharon – Wednesday, 19 May 2021 – 21:22:49

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Sharon Settecasse
Sent	19/05/2021 9:22:49 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to you because I believe in a strong connection to country, a recognition of the traditional custodians of this land, a strong economy and a bright future for our children and their children. I also the health and safety of our citizens. The proposed plan by Empire Energy would put the things that I and many people value, in absolute jeopardy.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

Please do not approve this application. Our country cannot afford to destroy more water sources, land and environment and animals, for the short-term gain of a very few stakeholders. Surely you will see that, surely you must start thinking generations ahead and not a few years. Surely you have at your fingertips all the information to tell you what a terrible idea this, and many other mines and wells are.

The specifics of my supplication to you are as follows.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry

season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Deni Sevenoaks

Sheedy, Judy – Tuesday, 11 May 2021 – 12:05:03

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Judy Sheedy
Sent	11/05/2021 12:05:03 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Judy Sheedy

Sheehan, Ocha – Tuesday, 11 May 2021 – 19:31:45

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ocha Sheehan
Sent	11/05/2021 7:31:45 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Ocha Sheehan

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

The Northern Territory was my home for 2 years. It is a beautiful state, and worth protecting from environmental destruction by fracking. There are many people who live in this part of the world who are not in positions to argue to protect their land and way of life. I urge you not to ignore the danger this fracking project will result in for the NT environment and its people.

Yours sincerely,

Rachael Sheridan

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

This is a waste of public money, a danger to underground water and an environmental mess will be created, for what?

Yours sincerely,

Nicholas Shield

Shields, Jessica – Wednesday, 12 May 2021 – 09:44:52

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jessica Shields
Sent	12/05/2021 9:44:52 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Alessandro Silano

Silver, Barry – Tuesday, 11 May 2021 – 12:31:42

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Barry Silver
Sent	11/05/2021 12:31:42 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Samuel Sisti
Sent	11/05/2021 3:51:20 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Samuel Sisti

Siu, Aaron – Friday, 14 May 2021 – 21:23:07

Subject	Imperial 2021-2025 EP187 Work Program EMP
From	Aaron Siu
Sent	14/05/2021 9:23:07 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Smallman, Tom – Tuesday, 11 May 2021 – 13:48:18

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Tom Smallman
Sent	11/05/2021 1:48:18 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas / Empire Energy for clearing and fracking activity on Exploration Permit 187.

I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country.

Imperial is proposing to frack just 1.1 km from a water bore. This is the minimum set-back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm concerned about the effect on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk.

The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, that is, what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't been

completed and the plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial Oil and Gas/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full federal assessment process and a Territory Environmental Impact Assessment.

Yours faithfully,

Tom Smallman

Smark, Tony – Tuesday, 11 May 2021 – 12:53:45

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Tony Smark
Sent	11/05/2021 12:53:45 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Lindy Smith

Smith, Vivien – Wednesday, 12 May 2021 – 15:04:35

Subject	Imperial 2021-2025 EP187 Work Program EMP
From	Vivien Smith
Sent	12/05/2021 3:04:35 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells and six new well pads in the Northern Territory will have significant combined environmental impacts. I feel that the scale of this project is beyond the scope of the NT EMP process. It should be assessed at the Federal level in consultation with the NT EPA through a full environmental impact assessment.

I understand that the fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Furthermore, Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination. I am very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed to make an informed decision as to the safety or otherwise of such major works. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a significant contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a serious risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are

only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ne SOBEK
Sent	11/05/2021 12:12:35 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

ne SOBEK

Sposito, Ann – Thursday, 13 May 2021 – 17:35:25

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ann Sposito
Sent	13/05/2021 5:35:25 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Ann Sposito

Stanford, Richard – Tuesday, 11 May 2021 – 14:00:40

Subject	I object to Imperial 2021-2025 EP187 Work Program EMP
From	Richard Stanford
Sent	11/05/2021 2:00:40 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Richard Stanford

Stanley, Graham – Wednesday, 12 May 2021 – 00:17:43

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Graham Stanley
Sent	12/05/2021 12:17:43 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Gail Stanley

Stanton, Meredith – Thursday, 13 May 2021 – 07:07:18

Subject	Objection to Imperial 2021-2025 EP187 Work Program EMP
From	Meredith Stanton
Sent	13/05/2021 7:07:18 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

Objection to Imperial ***** EP187 Work Program EMP

I write to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

These plans should be the subject of a full Federal assessment process and a Territory Environmental Impact Assessment because this proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts.

I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants and I urge you to support the interests of the community and strengthen safeguards for environmental oversight before any work commences on EP 187.

I believe the scale of this project is beyond the scope of the NT EMP process. This project requires Federal assessment with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and favour establishment of invasive species, which typically appear in areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm particularly concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Government approvals to frack in the Territory must be carefully regulated with genuine oversight of the company's (Imperial Oil and Gas/ Empire Energy) plans and processes.

Please do not risk causing long term environmental and social impacts which will be detrimental to the health of future generations.

sincerely,

Meredith Stanton

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Lisa Stefanoff

Steffan, Alexandra – Tuesday, 11 May 2021 – 18:43:05

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Alexandra Steffan
Sent	11/05/2021 6:43:05 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Stevenson, Craig – Tuesday, 11 May 2021 – 13:50:30

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Craig Stevenson
Sent	11/05/2021 1:50:30 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Craig Stevenson

Stevenson, Joy – Wednesday, 12 May 2021 – 08:20:46

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Joy Stevenson
Sent	12/05/2021 8:20:46 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Jasmine Story

Sunder, Manjari – Wednesday, 12 May 2021 – 06:17:56

Subject	Wake up to life !Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Manjari Sunder
Sent	12/05/2021 6:17:56 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

First I like to remind you that you are in this position to help people not to destroy life. So please act to save what's left as it's our life!

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Sutch, Fiona – Thursday, 13 May 2021 – 21:35:21

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Fiona Sutch
Sent	13/05/2021 9:35:21 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing as a concerned Australian citizen to express my deepest concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I wish to strongly express my opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This proposed fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Fiona Sutch

Tait, Lillian – Tuesday, 11 May 2021 – 12:07:27

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Lillian Tait
Sent	11/05/2021 12:07:27 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Lillian Tait

Tan, Jef – Tuesday, 11 May 2021 – 15:27:25

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jef Tan
Sent	11/05/2021 3:27:25 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Taylor, Greer – Tuesday, 11 May 2021 – 15:57:56

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Greer Taylor
Sent	11/05/2021 3:57:56 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I did not write the text below but I agree completely with all it says - fracking damages ecosystems and in doing so damages the potential for the earth to repair (each time she loses an 'organ' she has less capacity to respond to the damage being done*). We must ensure ecosystems are left intact and supported into being their full vibrancy - this is where we must place our energy... not in fracking; fracking is a short term grab at something that will have very long term damaging consequences.

<< *you might disregard my comments as hippie woo-woo but our earth IS a living thing and like all living things including your body, it functions best when it is fully intact. This reality is being supported in science every day - the biotic pump is a case in point.>>

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Paul Taylor

Tebbutt, Peter – Tuesday, 11 May 2021 – 14:58:27

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Peter Tebbutt
Sent	11/05/2021 2:58:27 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Murray Thomas

Thompson, Kathryn – Wednesday, 12 May 2021 – 07:43:01

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Kathryn Thompson
Sent	12/05/2021 7:43:01 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Sent	11/05/2021 2:09:45 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Thomas Timpe

Touzeau, Jane – Wednesday, 12 May 2021 – 17:41:16

Subject	I object to Imperial 2021-2025 EP187 Work Program EMP
From	Jane Touzeau
Sent	12/05/2021 5:41:16 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am deeply concerned regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. This dangerous fracking program needs the full regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads.

Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites.

Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks. All this will interfere with natural vegetation and the biodiversity it supports.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error.

The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality.

The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry

season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has acted in bad faith by not releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Jane Touzeau

Tovar, Surian – Wednesday, 12 May 2021 – 10:56:01

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Surian Tovar
Sent	12/05/2021 10:56:01 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP).

Look no one in the NT wants fracking. Just the filthy rich resource giants that are mostly likely in your pockets as I write this email. I know you mob are smarter than this which is why now I have been lead to believe you simply don't care. All it takes is one dodgy well , one slip up and an entire regions water table is buggered. In the Australia we cannot afford to take such gambles with our water.

The adverse impacts of fracking are seen in virtually every large scale fracking operations. Particular in the US where water tables have been poisoned , people are getting sick (cancer rates skyrocketing in regions with many wells), entire landscapes destroyed, fracking linked earthquakes have become the norm among other consequences. Not too mention that the age of fossil fuels is on its way out and becoming less profitable every year.

Please do not risk my homes future.

Yours sincerely,

Surian Tovar

Nightcliff, Northern Territory, 0810, Australia

Tran, Vinh – Tuesday, 11 May 2021 – 12:48:10

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Vinh Tran
Sent	11/05/2021 12:48:10 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Vinh Tran

Treasure, Marion – Tuesday, 11 May 2021 – 16:07:32

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Marion Treasure
Sent	11/05/2021 4:07:32 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep despair and concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm deeply concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk. Clean water is Our Greatest Asset. Please truly realise it's value and importance to all of life, and legislate accordingly.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Mitzi Tuke

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ochre Turner
Sent	11/05/2021 8:10:33 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Ochre Turner

Vanessa, Brady – Saturday, 15 May 2021 – 07:01:27

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Brady Vanessa
Sent	15/05/2021 7:01:27 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Vanhees, Joanne – Thursday, 13 May 2021 – 07:28:19

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Joanne Vanhees
Sent	13/05/2021 7:28:19 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

joanne vanhees

Vassilevska, Jiva – Tuesday, 11 May 2021 – 15:15:55

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jiva Vassilevska
Sent	11/05/2021 3:15:55 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

The world is moving towards renewable energy, Australia could ben leader in this direction, fracking is absolutely unnecessary and damages the extremely beautiful and fragile Northern Territory.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk.

The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Imperial Oil and Gas EMP submission

The Arid Lands Environment Centre (ALEC) is Central Australia's peak community environmental organisation that has been advocating for the protection of nature and ecologically sustainable development of the arid lands since 1980. ALEC actively contributes to the development of energy and resources policy through regulatory reform, written submissions, community education and advocacy within the community.

ALEC welcomes the opportunity to make a comment on Imperial Oil and Gas's (Imperial) Environment Management Plan (EMP).

ALEC strongly opposes the Imperial EMP and its proposal to hydraulic fracture (frack) seven wells in the McArthur Basin at EP187. ALEC considers Imperial's proposed actions to have the potential to cause a significant impact to the environment. It is vital that the Minister for the Environment refers these shale gas activities to the Northern Territory Environment Protection Authority (NT EPA) to conduct an Environment Impact Assessment (EIA) under s.50 of the *Environment Protection Act* 2019 (EP Act).

ALEC's submission focuses on: scientific uncertainty, baseline data, cumulative impacts and 'exploration creep'; water resources; and, threatened species.

1. Scientific uncertainty - lack of baseline data

The Beetaloo Sub-basin and greater McArthur basin represent greenfield petroleum resources. This means it is a region with limited baseline data (ecological as well as geologic). The Strategic Regional Environment and Baseline Assessments (SREBA) is a key structure of the Fracking Inquiry recommendations and involves the completion of 6 baseline studies advised to occur over a 3-5 year period.¹ After the completion of the SREBA, this baseline data and additional scientific information, will enable a Final Risk Assessment to be conducted.² This will determine whether the shale gas industry in the Beetaloo Sub-Basin is viable.

EP187, the site of Imperial's proposed new fracking activities lies outside of the Beetaloo Sub-Basin. The SREBA has primarily been conducted within the Beetaloo Sub-Basin, with research also completed in the Beetaloo GBA extended region. EP187 lies outside of both of these boundaries in the McArthur Basin. It is a region with extremely limited existing data.

¹ Scientific Inquiry into Hydraulic Fracturing in the Northern Territory *Final Report*, p.451-452.

² Scientific Inquiry into Hydraulic Fracturing in the Northern Territory *Final Report*, p.39.

Much of the information conducted in the SREBA is likely to not be transferable to EP187, namely: terrestrial ecosystems, social, cultural and economic and aquatic ecosystem baselines. In addition, to understand the impacts of the proposed actions, further research is necessary around water quality and quantity, greenhouse gas emission and environmental health.

The Imperial EMP conducted one ecological assessment in March 2021. It is far from best practice scientific research, for such a limited pool of data to inform a baseline. Additionally, although there is a methods section, the EMP does not outline the scientific methods that were adopted to conduct this research, nor are timelines provided for the number of days spent in the field.³ It remains unclear whether these baselines are replicable. The results from March 2021 tell us information from that particular point in time - one dataset of results does not provide enough evidence to inform a baseline. This is particularly true in the tropics, where time of year will significantly impact the species that are identified. Further research is essential to ensure that a genuine ecological baseline is conducted. Without it, there is substantial potential that significant impacts will occur to the environment. It is vital that the proposed actions are referred to the NT EPA, so a comprehensive EIA can be conducted.

It should also be noted that conducting baselines for the region in 2021, will inherently ignore changes that have already occurred as a result of climate change impacts, invasive species and changed fire regimes.

The EMP also relies heavily on desktop research to understand potentially significant impacts. There is very limited existing research conducted for this region. It is therefore unsurprising that the proponent would state: “Imperial believe the proposed activity does not represent any potential impact on the environment; therefore, it does not require an EIA”.⁴ There is a huge amount of information, data and knowledge missing from the proponents EMP. For example, there has been limited field work, the proponent hasn’t ground-truthed the watercourses near the selected sites of their well-pads,⁵ nor has any comprehensive water testing been completed on EP187. Reliance upon desktop data, in a region which has limited to no existing data across various environmental, social and cultural factors is deeply concerning. The potential impacts can’t be emphasised in a risk matrix, if the data does not exist. An EIA is essential to ensure a comprehensive analysis of the development site is conducted.

Recommendation 1: Under s.50 of the EP Act Environment Minister Eva Lawler refers, Imperial’s proposed actions to the NT EPA to undergo an EIA.

Recommendation 2: Further field work is required to generate an ecological baseline around EP187.

Recommendation 3: The SREBA is expanded and baseline assessments are conducted across the greater McArthur Basin.

³ Imperial OG 2021-2023 EP187 Program - Appendices 01-05, p.76-104.

⁴ Environment Management Plan Imperial Oil & Gas: 2021-2025 EP187 Work Program NT Exploration Permit (EP) 187, p.28.

⁵ Environment Management Plan Imperial Oil & Gas: 2021-2025 EP187 Work Program NT Exploration Permit (EP) 187, p.45.

2. Cumulative impacts and ‘exploration creep’

Justice Rachel Pepper in handing down her recommendations from the Scientific Inquiry into Hydraulic Fracturing in the Northern Territory (Fracking Inquiry) emphasised that strong safeguards are needed to prevent ‘exploration creep’ from occurring.⁶ Exploration creep is when a large number of wells are drilled and fracked under the conditions of an exploration licence. To overcome exploration creep, the Fracking Inquiry clearly stated that emphasis be placed on the assessment of cumulative impacts.

Schedule 1 s.3(2)(b) of the *Petroleum (Environment) Regulations 2016* clearly states that EMPs must report cumulative impacts.⁷ It is vital that these cumulative impacts outlined in Imperial’s EMP are assessed in conjunction with other shale gas activities in the Beetaloo Sub-Basin and greater McArthur Basin. Currently, no shale gas activities in the Beetaloo Sub-Basin/ McArthur Basin have been referred to the NT EPA to undergo an EIA. These proposed actions in this EMP represent the largest fracking operation in the Northern Territory to date. It is vital that activities that have the potential to cause significant impact to the environment, be subject to the full and comprehensive EIA. These shale gas activities have not occurred at this scale in the Northern Territory. It is prudent that the regulators are engaged with a new industry as it continues to undergo expansion.

ALEC also holds significant concern at the continued greenhouse gas (GHG) emissions that are created as a result of the exploration wells, whilst no plan exists on how these emissions are going to be offset.

Recommendation 4: A cumulative impact assessment is conducted as part of an EIA.

Recommendation 5: A plan to offset GHG emissions is created, as per recommendation 9.8 of the Fracking Inquiry.

3. Impacts upon water resources

The proposed actions on EP187 will primarily impact the Gum Ridge Aquifer water resource. It is a shallow water resource, with the Carpentaria 1 well, showing that the resource is 50-150m below the surface.⁸

Preliminary water study results from SREBA have shown that stygofauna are present in the Cambrian Limestone Aquifer in the Beetaloo Sub-Basin.⁹ This includes the Gum Ridge Formation. Through the presence of *Parisia unguis*, it has been shown that there is high connectivity between groundwater systems in the Beetaloo Sub-Basin. This has substantial implications for water resources, with fracking spills having the potential to impact environments far removed from the spill site.

⁶ Scientific Inquiry into Hydraulic Fracturing in the Northern Territory *Final Report*, p.413-414, p.451

⁷ *Petroleum (Environment) Regulations 2016*, p.35.

⁸ Environment Management Plan Imperial Oil & Gas: 2021-2025 EP187 Work Program NT Exploration Permit (EP) 187, p.59.

⁹ Rees, G, Oberprieler, S, Nielsen, D, Watson, F, Shackleton, M, Davis, J, 2020. Characterisation of the stygofauna and microbial assemblages of the Beetaloo Sub-basin, Northern Territory. GISERA.

No water studies have been conducted around EP187 as it lies outside of the jurisdiction of the SREBA. It is vital that water resources are not put at risk prior to the completion of scientific studies so that baselines are determined and understood. There is limited knowledge of how the groundwater system at EP187 functions. The expansion of shale gas activities must not occur when there are so many unanswered questions around water resources. An EIA is integral to ensure the protection of water resources, and so that the development of shale gas activities can occur in a way which is informed and supported by the best available science.

Recommendation 6: Water quality and quantity studies are completed in the Greater McArthur Basin, including at EP187.

Recommendation 7: Water studies are completed to investigate whether subterranean groundwater dependent ecosystems such as stygofauna exist in the water resources around EP187.

4. Threatened species

The EMP has identified a number of threatened species present under the *Environment Protection and Biodiversity Conservation Act 1999*. This includes 13 threatened species and 14 migratory species (although 8 are specialist marine species).¹⁰ In March 2021 during Imperial's ecological assessment with DEPWS staff, the Gouldian Finch, an endangered species was observed.

ALEC holds significant concerns around the limited field work that has been conducted. Best practice scientific research is required which is rigorous, replicable and conducted over multiple seasons and years. The most effective way to ensure that the full impacts of this development are understood is to conduct an EIA. Otherwise, there is substantial potential for significant environmental harm as a result of these proposed actions.

Recommendation 8: Extensive flora and fauna surveys are conducted across EP187 to build a baseline.

Alexander Vaughan - Policy Officer

¹⁰ Environment Management Plan Imperial Oil & Gas: 2021-2025 EP187 Work Program NT Exploration Permit (EP) 187, p.11.

Venn, Robert – Wednesday, 12 May 2021 – 12:00:48

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Robert Venn
Sent	12/05/2021 12:00:48 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Robert Venn

Venter, Deon – Tuesday, 11 May 2021 – 12:30:06

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Deon Venter
Sent	11/05/2021 12:30:06 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Deon Venter

Waidelich, Jalquin – Tuesday, 11 May 2021 – 19:25:26

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jalquin Waidelich
Sent	11/05/2021 7:25:26 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Wakeling, Kathy – Tuesday, 11 May 2021 – 15:02:41

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Kathy Wakeling
Sent	11/05/2021 3:02:41 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Kathy Wakeling

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jill Wallace
Sent	13/05/2021 12:15:36 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Fracking is proven environmental vandalism. Do not keep on destroying our country please see sense, once the damage is done there's no fixing it , it becomes a permanent scar on our record of stupid irresponsible decisions.

Yours sincerely,

Jill Wallace

Wallace, Mark – Tuesday, 18 May 2021 – 19:25:19

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Mark Wallace
Sent	18/05/2021 7:25:19 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Mark Wallace

Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Graham Warburton

Warren, Joshua – Wednesday, 12 May 2021 – 19:17:32

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Joshua Warren
Sent	12/05/2021 7:17:32 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am a physiotherapist working at Alice Springs Hospital. I care deeply about community and importance of health equity.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

JANICE WATSON

Watson, Jeanette – Tuesday, 11 May 2021 – 14:37:45

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jeanette Watson
Sent	11/05/2021 2:37:45 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

No fracking should go ahead without robust and verified knowledge of the linkage of groundwater systems.

No fracking should go ahead without clear demonstration of the ability by the relevant regulatory authority to monitor compliance with conditions required.

No fracking should go ahead without clear knowledge of how to address the problem of methane leakage which has been recently found to be a far greater problem than previously realised.

Weiss, Anna – Tuesday, 11 May 2021 – 12:51:14

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Anna Weiss
Sent	11/05/2021 12:51:14 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Anna Weiss

Whiston, Lisa – Tuesday, 18 May 2021 – 19:39:23

Subject	Please accept my Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Lisa Whiston
Sent	18/05/2021 7:39:23 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am a mother who cares deeply about my family and the future of my country, and I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Lisa Whiston

White, Carol – Tuesday, 11 May 2021 – 12:53:11

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Carol White
Sent	11/05/2021 12:53:11 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Whitehead, Eileen – Tuesday, 11 May 2021 – 14:27:06

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Eileen Whitehead
Sent	11/05/2021 2:27:06 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency. The secrecy, is no doubt, because all the fossil fuel companies are well aware that roughly 64% of the Australian population is against such mining!

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Eileen Whitehead

Whitney, Susan – Wednesday, 12 May 2021 – 08:15:44

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Susan Whitney
Sent	12/05/2021 8:15:44 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Whittaker, Jemma – Tuesday, 18 May 2021 – 21:49:38

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jemma Whittaker
Sent	18/05/2021 9:49:38 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

Comments: Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie, I am to writing to express my deep concerns regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187. I strongly believe that this proposal for 7 new fracking wells in the Northern Territory will have significant combined environmental impacts. I am deeply concerned this fracking proposal is not receiving the regulatory scrutiny it most definitely needs. I strongly believe that the scale of this project is beyond the scope of the NT EMP process. This project needs to be assessed at the Federal level, with the involvement of the NT EPA through a full environmental impact assessment. I am very worried that the category of "exploration" is being used to avoid full environmental scrutiny. Imperial is outrageously proposing to frack just 1.1km from a water bore. This is the bare minimum set back distance permitted, and I believe that this is just not good enough in terms of guaranteeing safety to water. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination so how could this distance of 1.1km from a bore be even allowed? As I hope you are aware , the recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should be enough to stop all fracking activity until further studies are carried out. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new significant stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk and I am outraged at the prospect of these newly discovered species facing this. Please take notice of the science that is behind these studies and do not put our precious water at risk, the potential for irreversible damage is just too great. As a mother and a teacher of young children, our next generation, I implore you to see that this proposal surely meets the criteria for compulsory EPA referral with 'the potential to have a significant impact on the environment' . It is just not in one sphere where significant impacts may be had. I believe our groundwater is at risk, habitat loss due to the 150 hectares of land being cleared will occur, the issue of waste storage and transport, and the overall impact on climate change will all contribute to a 'significant impact'. I live in Alice Springs where temperature records have already been broken. In the year to July 2019, Alice Springs had 129 days over 35C, and 55 days over 40C. We all need the government to take climate change risks seriously, and

acknowledge that all new fossil fuel developments hold “the potential to have a significant impact on the environment”. Once again I want to reiterate that this proposal surely meets the criteria for compulsory EPA referral with 'the potential to have a significant impact on the environment' . Thank you for your consideration of my comments.

Wilkins, Andrew – Wednesday, 12 May 2021 – 05:01:58

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Andrew Wilkins
Sent	12/05/2021 5:01:58 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

As an annual visitor to the Territory- I would not want to see it destroyed/polluted, in any way shape or form, for a quick buck.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

Having lived in the Northern Territory, and seen the disregard for the Traditional Owners of country, let alone country itself, I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I have heard on many occasions of the detrimental effects of fracking on the water resources and aquifers on country. I feel that this project will have this sort of effect and strongly oppose it going ahead.

Yours sincerely

Lesley Wilkins

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Karen Wilkinson

Williames, Evelyn – Tuesday, 11 May 2021 – 12:35:14

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Evelyn Williames
Sent	11/05/2021 12:35:14 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts and I am concerned that this fracking program is not receiving the regulatory scrutiny it needs.

I believe the scale of this project is such that it is beyond the scope of the NT EMP process and should be assessed at the Federal level with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes seven fracking wells and six new well pads. The fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I am very concerned about impacts on groundwater quality. The recent discovery of at least eleven new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule also coincides with peak tourism season. The economic impacts of this and the road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season and increased traffic from the fracking fields, including heavy and oversized vehicles, will put these travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway also presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. Any fluids spilt during storage and transport are at risk of flowing into the Limmen Bight.

Many of the essential details regarding well integrity, (i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure) are only detailed in the Well Operations Management Plan (WOMP) which hasn't even been completed yet. This Plan will not be released to the public nor the Environment Minister. Such secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Wilson, Brian – Wednesday, 12 May 2021 – 20:40:47

Subject	I like many others strongly object to Imperial 2021-2025 EP187 Work Program EMP
From	Brian Wilson
Sent	12/05/2021 8:40:47 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Brian Wilson

Winnell, Jodie – Tuesday, 11 May 2021 – 12:42:27

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jodie Winnell
Sent	11/05/2021 12:42:27 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Winston, Jerome – Tuesday, 11 May 2021 – 20:25:03

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jerome Winston
Sent	11/05/2021 8:25:03 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am extremely concerned about the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy to permit clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I request that this project be assessed at the Federal level, with detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will impact a major expanse of country. Previous impact studies indicate such work will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error.

The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impact on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable. Fracking activities may put these species and groundwater at risk.

Proposed fracking work coincides with peak tourism season. The adverse economic impacts and road safety issues need to be fully assessed. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, ie, what composition of wells, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed, and the Plan will apparently not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment. I am counting on your ensuring this occurs.

Yours sincerely,

Jerome Winston

The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
M Woods

WOOLHOUSE, Hannah – Tuesday, 11 May 2021 – 17:32:12

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Hannah WOOLHOUSE
Sent	11/05/2021 5:32:12 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Wright, Elizabeth – Thursday, 13 May 2021 – 12:19:23

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Elizabeth Wright
Sent	13/05/2021 12:19:23 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

Here we go again. I am still writing to government to ask them to stop the fracking . I am not happy paying my tax money into such exploration and destruction of my country. Only to be later told , my children will be picking up the pieces of the governments inaction. Worst thing of which, is that you will not be accountable for this criminal action. And it is criminal. Others who blatantly destroy the environment are accountable.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Wylie, Ken – Saturday, 15 May 2021 – 23:25:23

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ken Wylie
Sent	15/05/2021 11:25:23 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

The Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.concerns me greatly. Especially as there can be terrible environmental consequences from fracking.

The proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

Imperial Oil's proposal includes 7 fracking wells and 6 new well pads. The beautiful environment in this area will never be the same - let alone what damage could be done to the underwater system.The wells will be connected by a grid of roads and flow lines - with the pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

Altogether, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. Water nowadays is a threatened commodity. No one should be able to put our groundwater at risk. This is cavalier environmental planning.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Ken Wylie

Wylie, Sally – Saturday, 15 May 2021 – 23:29:40

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Sally Wylie
Sent	15/05/2021 11:29:40 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am angry regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory should never happen. The history of fracking is fraught with frightening environmental damage from fracking . I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

I reiterate:

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

sally Wylie

WYNNE, LEONIE – Tuesday, 11 May 2021 – 17:27:37

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	LEONIE WYNNE
Sent	11/05/2021 5:27:37 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Wynter, Jo – Tuesday, 11 May 2021 – 14:42:46

Subject	I strongly object to Imperial 2021-2025 EP187 Work Program EMP
From	Jo Wynter
Sent	11/05/2021 2:42:46 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I lived in the Territory for years and love it!

So I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal is ridiculous.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. Fracking so close to a water bore risks of water contamination.

There are so many problems This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

And NO Territory or Federal government funding should be issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yarwood, Sharon – Tuesday, 11 May 2021 – 19:57:46

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Sharon Yarwood
Sent	11/05/2021 7:57:46 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Do you realise how much precious water the filthy, destructive industry of fracking uses, how much it poisons, how it causes earthquakes. It's absolutely disgusting what we are doing to this world and this is one of the worst industries imaginable and should be banned worldwide.

Yours sincerely,

Yee, Vera – Tuesday, 11 May 2021 – 13:41:44

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Vera Yee
Sent	11/05/2021 1:41:44 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Vera Yee

Yeomans, Andy – Tuesday, 11 May 2021 – 15:33:28

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Andy Yeomans
Sent	11/05/2021 3:33:28 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Why does this government persist in its obsession with fossil fuels when it has been proven that renewable energy can provide reliable clean energy, more sustainable jobs and minimal environmental impact? The high level of fugitive emissions from fracked wells have been well documented by Southern Cross University, Lismore. To allow more of this is criminal insanity with the radical climate changes happening now due to increased greenhouse gasses.

Please encourage new forms of energy export such as clean hydrogen. The technology exists now. Carbon capture is unproven and expensive..

For us and our children's' future.

Yours sincerely,

Andy Yeomans

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Alison Zinslo
