

Abadie, Abadie – Wednesday, 12 May 2021 – 19:47:13

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Abadie Abadie
Sent	12/05/2021 7:47:13 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Bernard Abadie

ADAMS, SHERIDAN – Thursday, 13 May 2021 – 15:33:56

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	SHERIDAN ADAMS
Sent	13/05/2021 3:33:56 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Agass, Veronica – Tuesday, 18 May 2021 – 07:32:47

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Veronica Agass
Sent	18/05/2021 7:32:47 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Brian Allen
Sent	11/05/2021 1:23:41 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Brian Allen

Allen, Susan – Wednesday, 12 May 2021 – 06:53:50

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Susan Allen
Sent	12/05/2021 6:53:50 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Thomas Timpe

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Vicki Anderson

ANDREW, Karen – Saturday, 15 May 2021 – 08:05:33

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Karen ANDREW
Sent	15/05/2021 8:05:33 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

Arbon, Veronica – Friday, 14 May 2021 – 10:10:05

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Veronica Arbon
Sent	14/05/2021 10:10:05 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

The destruction of water flows, sacred sites and vegetation on the land that will be cleared and destroyed to allow for such fracking is a major concern. In my country the BHP Roxby Downs water pipeline from the Lake Eyre Basin to the mine has done untold damage to such areas. We are extremely angry about the destruction. This must not happen with the beautiful country of the Northern Territory.

This fracking work schedule also coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Armitage, Karen – Tuesday, 11 May 2021 – 12:33:25

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Karen Armitage
Sent	11/05/2021 12:33:25 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Karen Armitage

Armstrong, Mike – Wednesday, 12 May 2021 – 10:27:30

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Mike Armstrong
Sent	12/05/2021 10:27:30 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Sue Attreed

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Anna-Rosa Baker
Sent	11/05/2021 5:18:43 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Anna-Rosa Baker

Baragry, Shawen – Wednesday, 12 May 2021 – 20:35:37

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Shawen Baragry
Sent	12/05/2021 8:35:37 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Shawen Baragry

BARRY, VICKI – Tuesday, 11 May 2021 – 13:08:45

Subject	Register my objection to Imperial 2021-2025 EP187 Work Program EMP
From	VICKI BARRY
Sent	11/05/2021 1:08:45 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I write to you to implore you to reconsider even more carefully the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

In light of our responsibility to the environment, and the planet in general, and also to reduce further emissions from fossil fuels, please do not let this development go ahead. We have already seen the dangers of polluting our already challenged clean water supplies.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

Bartlett, Lynette – Tuesday, 11 May 2021 – 13:05:21

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Lynette Bartlett
Sent	11/05/2021 1:05:21 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Lynette Bartlett

Bartlett, Richard – Tuesday, 11 May 2021 – 12:06:48

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Richard Bartlett
Sent	11/05/2021 12:06:48 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Beek, Peter – Tuesday, 11 May 2021 – 12:15:08

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Peter Van Beek
Sent	11/05/2021 12:15:08 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

An inexperienced, unknown company Its being given a licence to destroy another part of Australia for what? Regardless of what our Gas-led recovery plan states, gas will be on its way out before any serious production will happen.

So, I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk.

The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Peter Van Beek

Beer, Ron – Tuesday, 11 May 2021 – 19:43:23

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ron Beer
Sent	11/05/2021 7:43:23 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Ruth Bence

Bennett, Kenneth – Tuesday, 11 May 2021 – 20:05:29

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Kenneth S Bennett
Sent	11/05/2021 8:05:29 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Don Berry

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my anger and extreme concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Warren Birki

Blamey, Kathryn – Tuesday, 11 May 2021 – 12:35:12

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Kathryn Blamey
Sent	11/05/2021 12:35:12 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Kathryn Blamey

Boke, Gustavo – Thursday, 13 May 2021 – 12:01:50

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Gustavo Boke
Sent	13/05/2021 12:01:50 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Bond, Brett – Tuesday, 11 May 2021 – 12:39:49

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Brett Bond
Sent	11/05/2021 12:39:49 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

What are you thinking?

Environmentally this process is disastrous and economically it doesn't make sense as renewable produce increasingly cheaper options.

Australia's support and expansion of carbon based energies is embarrassing. We will soon become the dumping ground of antiquated technology.

Lead this country into the future instead of anchoring it to the past.

Yours sincerely,
Brett Bond

Bond, Rae – Friday, 14 May 2021 – 14:16:36

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Rae Bond
Sent	14/05/2021 2:16:36 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Rae Bond

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Judith Bourne

Bowden, S – Tuesday, 11 May 2021 – 13:52:14

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	S Bowden
Sent	11/05/2021 1:52:14 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. Boyle, John – Tuesday, 11 May 2021 – 13:55:53

Subject	I strongly object to the proposed Imperial 2021-2025 EP187 Work Program EMP
From	John Boyle
Sent	11/05/2021 1:55:53 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am deeply concerned regarding the Environmental Management Plan (EMP) submitted by associate Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental may not be receiving the regulatory scrutiny it warrants.

Furthermore, it seems that the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. All fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

Moreover, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

This proposal includes fracking operations just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

Additionally, I am very perturbed about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Kerry Brady

Braithwaite, Alicia – Wednesday, 12 May 2021 – 21:14:56

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Alicia Braithwaite
Sent	12/05/2021 9:14:56 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

Surely, 'our' government has noticed the sun blazes over the Northern Territory, and the wind blows fiercely. This government could be making millions by advertising Australia as the world's 'big battery', run on nature's daily renewables. How blind to let such an opportunity fly past while devastating land and water not owned by this or any government but by the people of this planet? What a rare opportunity Australia has to lead the rest of the world in alternative sources of energy.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

I may live a long way away, but I have visited NT and found it to be an amazing place. Why allow it to be wrecked, piece by fracking piece?

I do not want fracking to become commonplace anywhere in Australia.

No tax payer money to go to frackers.

Yours sincerely,

Wendy Branagan

Brew, Jill – Tuesday, 18 May 2021 – 08:13:04

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jill Brew
Sent	18/05/2021 8:13:04 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am very very concerned about the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187. This is horribly depressing to write about, but please find objections below,

Seven new fracking wells in the Northern Territory?

I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants. It will have significant unfolding and spreading environmental impacts.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The intrusion on land is significant. The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

There's the matter of land clearing inviting in invasive species.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Why is the Territory's precious precious water being endangered in this cavalier way? Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Enquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

New discoveries about how our land and water operates are being made all the time. We don;t know it all yet. Stygofauna species that keep water clean and usable are now in the spotlight. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean. Fracking activities may put these species and groundwater at risk.

Then there's the contamination risk. Transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Why are things not out in the open? Many details of how the integrity of wells will be secured are not available for the public (who are subsidising exploration).. What will the wells will be made of, and what steps will Empire Energy take to mitigate the risk of well degradation or failure? They are only detailed in the (stil incomplete) Well Operations Management Plan (WOMP) which will not be released to the public nor the Environment Minister. Isn't this a clear breach of the Pepper enquiry's call for transparency? This secrecy regarding the details of well construction and operation is dangerous.

Lastly, the matter of funding: Funding should not be put towards Imperial/Empire Energy advancing this proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Jill Brew

Bricknell, Geoffrey – Tuesday, 11 May 2021 – 13:09:33

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Geoffrey Bricknell
Sent	11/05/2021 1:09:33 PM

To the Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

STOP BURNING OUR FUTURE !!!!!!!

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Geoffrey Bricknell

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

I have had gas heating in my home for 40 years, in Melbourne. I have recently purchased a new gas heater, only to learn that gas is going to be phased out for domestic use. I cannot believe that fracking for gas is to service the domestic market. If Australian citizens are trying hard to save the environment by making personal sacrifices (the new gas heater cost me half my disposable annual income) then I don't appreciate any government selling our natural environment out to global corporations just to make a quick buck.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Amy Brown

Brown, Anne – Tuesday, 11 May 2021 – 12:34:30

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Anne Brown
Sent	11/05/2021 12:34:30 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Brown, Susan – Tuesday, 11 May 2021 – 17:40:26

Subject	Vehement objection to Imperial 2021-2025 EP187 Work Program EMP
From	Susan Brown
Sent	11/05/2021 5:40:26 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I write to express my strongly held opinion that the clearing and fracking activity proposed in the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy on Exploration Permit 187 should not be allowed to go ahead.

Adding seven new fracking wells in the Northern Territory will have a damaging impact especially because of its significant combined environmental impacts. The regulators should be going through this proposal with a fine-toothed comb. Its potential damage to the environment must be calculated in detail with reference to its potential to poison groundwater, pollute surface water, impair wild landscapes, and threaten wildlife. I am afraid that this proposal for a fracking program is going to be rushed through by short-sighted politicians with no thought or understanding about its impacts.

I believe the scale of this project is beyond the scope of the NT EMP process and should be assessed at the Federal level with the detailed involvement of the NT EPA through a full environmental impact assessment.

This infrastructure for this proposal (including seven fracking wells and six new well pads) will negatively affect a large area of pristine country. Providing this infrastructure will involve building a grid of roads and flow lines (pipelines carrying polluted waste fluid between frack sites), clearing of land for well pads, seismic lines being cut across dry savanna woodland and traversing creeks, and pipelines and tracks being constructed beside and over creeks. Since we are at present suffering an extinction event of mammoth proportions, I think that the cost to animal lives and the environment caused by the construction and use of these unsightly items must be grounds enough for refusing this proposal.

The clearing of 150 hectares of land not just at one site will scar a significant stretch of country. This will attract feral animals and invasive species, which typically colonise areas of disturbance.

In Australia, water is a precious resource (and likely to become increasingly so) and the fact that Imperial is proposing to frack just 1.1 km from a water bore poses a significant risk that water will be contaminated. This is the minimum set back distance permitted in spite of the fact that the Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

Groundwater quality is of paramount importance. A recent expedition funded by CSIRO's GISERA found at least 11 new stygofauna species in the Cambrian Limestone Aquifer. The discovery of these tiny creatures and the possibility that many more remain to be discovered should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping

water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

Tourism activity is at its peak at the time this fracking work is planned to be underway and traffic activity along the Carpentaria Highway during the dry season increases. Still more traffic from the fracking fields, including heavy and oversized vehicles, will put other travellers at risk. The adverse economic impacts and road safety issues must be recognised and have not been properly considered.

In addition, the fact that the area is in a cyclone pathway raises the possibility that chemicals, radioactive mud and fracking waste fluids in pipelines and trucks or in open storage could cause significant contamination. Both the Limmen Bight River, which flows into Limmen Bight Marine National Park and the Limmen Bight itself could be contaminated by fluids spilt during storage and transport.

Many of the essential details regarding well integrity, including construction materials for the wells and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). This is not complete, and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of the materials to be used to construct the wells and their operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency. It also increases my suspicion that essential information is being swept under the mat.

In addition, I state my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy has not shown good faith in by releasing essential details of its proposed operations in EP187 to public scrutiny yet is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program. This must be denied.

In conclusion, in proposing the biggest shale fracking proposal ever seen in the NT Empire Energy is trying to get away with only a minimal environmental management plan. This must not be approved.

Yours sincerely,

Susan Brown

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Judith Bull

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Melanie Burt

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a dangerous contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Suzana Byrom

C, M – Wednesday, 12 May 2021 – 09:11:40

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	M C
Sent	12/05/2021 9:11:40 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Sandra Campbell

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Alex Caroline

Carroll, Anara – Thursday, 13 May 2021 – 15:53:52

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Anara Carroll
Sent	13/05/2021 3:53:52 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

This may be primarily a form letter containing details but ,I really want to state at the outset that I am very concerned by the whole issue of fracking and it's highly detrimental effect on the environment, and most particularly our precious and life giving water.

In my opinion it would be negligence on a massive scale for this project to go ahead, given the many serious environmental problems we already have. Please do not allow this, for our children and their children.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Pauline Cass

Castello, Linda – Tuesday, 11 May 2021 – 19:55:14

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Linda Dal Castello
Sent	11/05/2021 7:55:14 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Linda Castello

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Vania Chan

Chanas, Michael – Wednesday, 12 May 2021 – 08:36:36

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Michael Chanas
Sent	12/05/2021 8:36:36 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

Your government funded a scientific inquiry to examine the facts and understand what would need to be done to safeguard the territory from environmental contamination. As you can see from the government website linked below these have not been implemented and thus expose our population and country to the catastrophic impacts that fracking has been shown to impose. This lack of regulation will encourage these companies to cut corners and exploit our country of its resources without accountability.

<https://hydraulicfracturing.nt.gov.au/>

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Paris Chelo

Chenoweth, Ron – Wednesday, 12 May 2021 – 22:49:39

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ron Chenoweth
Sent	12/05/2021 10:49:39 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Ron Chute

Claff, Jack – Thursday, 13 May 2021 – 12:08:16

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jack Claff
Sent	13/05/2021 12:08:16 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. Subject	STRONG objection to Imperial 2021-2025 EP187 Work Program EMP
From	Valerie Clews
Sent	11/05/2021 3:36:14 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Valerie Clews

Clough, Claire – Wednesday, 12 May 2021 – 10:01:24

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Claire Clough
Sent	12/05/2021 10:01:24 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Robyn Coleman

Collett, Leon – Thursday, 13 May 2021 – 11:16:01

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Leon Collett
Sent	13/05/2021 11:16:01 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

There should be no fracking allowed anywhere as it is the most destructive method of getting any form of gas. Plus it leaves behind mass amounts of pollution, we have enough solutions to deal with, so let's put a stop to this right now and forever.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

Collins, Sophie – Friday, 14 May 2021 – 09:11:59

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Sophie Collins
Sent	14/05/2021 9:11:59 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

I express my strong opposition to any Territory or Federal government funding being issued to Imperial/Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Finally, I urge you to consider renewable and sustainable methods, and First Nations voices appealing to care for Country, when considering the overall direction of funding and policy for ongoing energy projects in the Northern Territory, which is already seeing devastating impacts of climate change on the health of its vulnerable people.

Yours sincerely,

Dr Sophie Collins

Collins, Suzanne – Wednesday, 12 May 2021 – 17:50:26

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Suzanne Collins
Sent	12/05/2021 5:50:26 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Connolly, Niall – Sunday, 16 May 2021 – 07:07:08

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Niall Connolly
Sent	16/05/2021 7:07:08 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

I further object to the Northern Land Council's support for fracking and its demonstrated failure to discharge its legal and fiduciary duty to consult with, properly inform and act in accordance with the wishes of traditional owners on their country. I know for a fact that a partner of an NLC lawyer (an active Territory Labor member) is an executive director of NT Onshore Gas - an her father is a mining and oil consultant. How can the lawyer possibly not have a conflict of interest? The NLC must be removed as the PBC for dealing with fracking companies. And 'Mr G' must be removed from his position at the NLC.

Connor, Kerrie – Tuesday, 11 May 2021 – 18:57:02

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Kerrie Connor
Sent	11/05/2021 6:57:02 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Kerrie Connor

There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk.

The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Peter Cook

Cook, Peter – Tuesday, 11 May 2021 – 18:05:59

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Peter Cook
Sent	11/05/2021 6:05:59 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Robert Cooper-Ritter

Coorey, Suraya – Sunday, 16 May 2021 – 11:09:31

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Suraya Coorey
Sent	16/05/2021 11:09:31 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my very deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry Savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Sally Cotton

Cox, Jan – Tuesday, 11 May 2021 – 12:29:22

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jan Cox
Sent	11/05/2021 12:29:22 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187. The risk of fracking, so close to an existing bore, is totally unacceptable. This is a high risk proposal, which risks irreparable damage to so many precious and unique environments, flora and fauna.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Jan Cox

Cox, Wendy – Tuesday, 11 May 2021 – 14:51:01

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Wendy Cox
Sent	11/05/2021 2:51:01 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Wendy Cox

Crocetti, Gemma – Tuesday, 11 May 2021 – 15:35:55

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Gemma Crocetti
Sent	11/05/2021 3:35:55 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Croft, Elizabeth – Saturday, 15 May 2021 – 09:14:10

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Elizabeth Croft
Sent	15/05/2021 9:14:10 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Elizabeth Croft

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ross & Crump
Sent	12/05/2021 10:28:19 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Ross & Crump

Cruz, Marian – Wednesday, 12 May 2021 – 08:13:36

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Marian Cruz
Sent	12/05/2021 8:13:36 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Patrizia curi

Curnock, Andrew – Tuesday, 11 May 2021 – 12:10:51

Subject	Very strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Andrew Curnock
Sent	11/05/2021 12:10:51 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

So far I have yet to see your office perform its function in protecting any environmental assets of note or make decisions that aren't solely in the interests of fossil fuel companies. This is deeply disappointing.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk.

The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Attached Documents

Dear Sir/Madam,

My name is <Confidential>. I am Nulanyma skin and I am Rrumbirriya clan. My other name is <Confidential> and I am a Traditional Owner for Balbarini (freehold) and Mukumpala (Native Title) parts of the traditional country of the Gudanji peoples of the northeastern Barkly Tablelands. I am writing with the permission, and at the request, of my family and so have their full support.

The above two areas of our traditional country were 'returned' to us in the 1990s. I am Nimirinki, which means that I can speak for my country. This kinship status has been and is identified in the anthropological investigation conducted by Northern Land Council to support the original submission for the return of our Country.

The most senior members of our family, who are authorised to make decisions regarding our country, and who have both asked that I write this letter, are Katie Baker and Peggy Mawson. The situation we currently find ourselves in is causing these two senior women extreme worry and is impacting their wellbeing given the Country we are referring to is women's country and NLC insist on speaking to junior women and to men who do not have the right to speak for that place.

I am writing on behalf of my family to request an urgent investigation and intervention into current and proposed gas mining and fracking activity on our Country. We understand that Empire Gas has been given approval by the Northern Territory Government to construct a gas well and frack on our freehold Country. We understand that there has been further approval to expand this to eight wells, connected by pipelines, roads, tailings dams and other heavy infrastructure – which will have a devastating impact upon our place. Additionally, it will certainly impact our family's capacity to continue to conduct and perform traditional cultural activities on our land and has the potential to destroy sacred sites. The probable impact on the water table is beyond terrifying. We have never agreed to Empire undertaking exploration on our land, let alone drill and frack; indeed, our family has not been part of the conversation in this regard.

Our family has been excluded from the consultation and approval process for this activity. We believe that this exclusion has been a deliberate and calculated attempt by the Northern Land Council (NLC) to prevent our voices from being heard. We have had a frustrating relationship with the NLC since our land was returned three decades ago. Our family's desire has always been to maintain Country and minimise the impact of mining and pastoral exploitation. To this end, we have previously voiced resistance to mining and large pastoral leases which have the capacity to damage our country. Our history with the NLC includes being excluded from meetings regarding decisions affecting our country: Meetings are held without notification, despite multiple avenues of communication being provided by ourselves to the NLC. Additionally, the NLC has gained 'approval' from people who have no right to speak for our country, to circumvent due process and any objections from the rightful traditional owners. This is a pattern of behaviour that has persisted over the last few decades and which we have been

powerless to stop – despite numerous letters, e-mails and phone calls, and meetings with politicians and lawyers. Put simply, the NLC is too large and protected, financially and politically, for us to be fight them alone.

The current crisis has brought matters to a head. We require urgent review of the current and proposed gas extraction activities on our country. To this end, we are voicing our loud and collective objection toward the activity, believing that due process has not been followed, and ask for a complete halt to activity whilst a thorough and appropriate investigation is undertaken.

We do not ask for favourable treatment simply that the voices of those who have the authority to speak for Country are given the opportunity to be heard. Due diligence has not been part of the NLC process, and they refuse to follow protocols claimed to be their way of engaging with Aboriginal peoples.

We respectfully request your urgent intervention.

Kind regards,

<Confidential>

Darr, Melissa – Wednesday, 19 May 2021 – 16:14:41

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Melissa Darr
Sent	19/05/2021 4:14:41 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Melissa Darr

There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Kalu Davies

Davies, Shelley – Tuesday, 11 May 2021 – 12:03:23

Subject	VERY Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Shelley Davies
Sent	11/05/2021 12:03:23 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

William Davis

Dawes, Michel – Sunday, 16 May 2021 – 20:21:58

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Michel Dawes
Sent	16/05/2021 8:21:58 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Mary-Louise Deveson
Sent	13/05/2021 8:56:32 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Mary-Louise Deveson

Dexter, Rob – Thursday, 13 May 2021 – 12:03:17

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Rob Dexter
Sent	13/05/2021 12:03:17 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Subject	Submission concerning EP187
From	Jorgen Asmussen Doyle
Sent	19/05/2021 8:21:26 AM

To whom it may concern,

Find attached the Central Australian Frack Free Alliance's submission on Imperial Oil's proposed works program *****.

Sincere regards,

CAFFA

Attached Documents

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

We, the Central Australian Frack Free Alliance (CAFFA), are writing to express our deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on country 85 kms southwest of Borrooloola as part of their proposed 2021-2025 works program.

About CAFFA:

CAFFA is a grassroots community group located in Mparntwe/ Alice Springs and organising to protect the NT's water, health, communities and country from the harms of unconventional gas extraction. We have been active over the last six years in raising awareness within the Alice Springs and Central Australian community about the risks posed by this poorly regulated and inherently dangerous industry. We are calling for transparency, clarity, and independent scientific research, as well as thorough community consultation.

Our work, which is largely conducted by volunteers, has seen CAFFA engaging with the community through market stalls, letterboxing, community surveying and other social events. This extensive engagement has furnished us with a solid understanding of the mood of the Alice Springs community on this issue. As a result of our activity, as well as that of similar grassroots and environmental groups in the top end, fracking was a major election issue in 2020, a clear indication of the widespread distrust towards this industry in the NT.

Our Concerns:

Imperial Oil and Gas' proposal for 7 new fracking wells in the McArthur Basin will have significant combined environmental impacts. We are deeply concerned that this fracking program is not receiving the regulatory scrutiny it warrants. We believe the term "exploration" is being misapplied by Imperial Oil in an effort to avoid full environmental scrutiny. To our understanding, there is little difference between exploration and production in terms of the potential for social and environmental harm.

Exploration implies a minimised environmental footprint, but Imperial Oil's proposal is anything but this. The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

To cut costs, Imperial is proposing to store waste water containing harmful surfactants in open ponds, in direct contradiction to recommendation 7.12 of the Pepper Inquiry. This presents significant risks to biodiversity in the region.

The inadequacy of the Imperial's EMP is further evidenced by the reliance on Desktop Surveys to gather data for risk assessments given that it is made clear in the Pepper Inquiry that the region can only be described as data deficient which means the desktop analysis is of little or no value for informing a risk assessment. The SREBA research needs to be available to inform consultation and

decision making before such a decision is made. This expansion proposal must be delayed until these deficiencies are addressed.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

We believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed through a full NT EIS process, and a full Federal Assessment under the EPBC Act for risks to nationally listed threatened species: *Erythrura gouldiae* (Gouldian Finch) *Ardeotis australis* (Australian bustard) and *Mesembriomys macrurus* (golden-backed tree rat) from habitat disturbance, increased predation and poisoning due to drinking water from open evaporation ponds containing fracking chemicals.

Risk to Groundwater Quality:

Imperial is, in our view, outlandishly proposing to frack just 1.1km from a water bore. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination. We are sceptical that the extra 100 metres added by Imperial represents a significant reduction in the risk of contamination by fracking chemicals. Furthermore, the bare minimum set back distance permitted by the Pepper Inquiry is already clearly outdated in light of the findings of recent stygofauna research in the Beetaloo Basin, which revealed groundwater connectivity over hundreds of kilometres¹.

These are also the shallowest wells yet to be fracked in the NT, one at just 1095 metres down. This means that there is less distance between the fracking layer and the groundwater layer.

As we learnt while writing a recent submission addressing the Alice Springs Water Allocation Plan 5 year review, there remains a significant knowledge and regulatory gap in terms of groundwater connectivity across the NT and how to safeguard groundwater supply. With regard to the McArthur Basin, where Imperial Oil intends to frack, Imperial Oil's own submission to the Pepper Inquiry states that:

In the [McArthur Basin Central Trough] region there is likely to be some degree of connection between the fractured rock aquifers, karstic carbonate aquifers and the basal sandstone of the Cretaceous sediments. However, there is no data to demonstrate or quantify these processes².

The release of the preliminary water study elements of the SREBA provide evidence that stygofauna are present in the Cambrian Limestone Aquifer in the Beetaloo Basin including the Gum Ridge Formation³.

¹ CSIRO press release, Tiny New Species Discovered as Scientists' Outback Fishing Trip Bags Exotic Catch

² Imperial Oil and Gas Pty Ltd, submission 1163, page 22

³ Gavin Rees, Stefanie Oberprieler, Daryl Nielsen, Garth Watson, Michael Shackleton and Jenny Davis, (2020) Characterisation of the stygofauna and microbial assemblages of the Beetaloo Sub-basin, Northern Territory. GISERA project number: W18. December 2020

The stygofauna present in the Gum Ridge Aquifer and the Cambrian Limestone system require a much more detailed analysis before any processes that might impact on their population are undertaken.

Further, the eDNA analysis of the prawn species *Parisia unguis* shows the systems are highly connected and pollutants can move over a significant distance.

The presence of this species, ranging across a geographic distance of ~300 km, and the low genetic divergence (maximum 3.9% in COI and 3.29% in 16s RNA gene) among specimens indicate groundwater connectivity in recent times⁴.

There are serious concerns not just with horizontal movements of water transporting fracking chemicals, but also with well corrosion, caused by sulfate-reducing bacteria and sulphur-oxidizing bacteria (SOB) known to be in the Beetaloo Basin and likely in the McArthur Basin as well⁵, leading to vertical inter-aquifer contamination.

The hypersaline nature of the deep aquifers and the high temperature further raises concerns about the integrity of the wells with both deep corrosion risks and closer to surface risks. There is a major concern among stakeholders that integrity failure will connect the hypersaline deep aquifers like the Moroak to beneficial fresh water systems like the Gum Ridge aquifer. This poses a massive risk to the human and animal use of the region in the medium and long term and is clearly a breach of ESD principle of intergenerational equity.

The future risks imposed on Territorians and other economic sectors are completely inappropriate and are a clear breach of the EPBC act provisions relating to Environmentally Sustainable Development (ESD) and the precautionary principle. The Samuels report⁶ clearly articulates the failures of jurisdictions such as the NT to enforce the EPBC act and its embedded principles. The NT Government espouses the ESD principles as the guiding principles in its decision making in relation to the processes around fracking yet it does not appear to be implementing these principles. The principles must be applied to the review of this EMP.

There are wild discrepancies across the NT with regard to no-go zones for petroleum and gas exploration intended to safeguard groundwater quality. In the Alice Springs water control district, for instance, petroleum and gas exploration activities are prohibited within 10 kilometres of town bore fields. Given how little is known, by Imperial Oil's own admission, of groundwater connectivity within the McArthur Basin, we consider fracking within 1.1 kilometres of existing water bores to pose an unacceptable risk.

⁴ Gavin Rees, Stefanie Oberprieler, Daryl Nielsen, Garth Watson, Michael Shackleton and Jenny Davis, (2020) Characterisation of the stygofauna and microbial assemblages of the Beetaloo Sub-basin, Northern Territory. GISERA project number: W18. December 2020

⁵ Gavin Rees, Stefanie Oberprieler, Daryl Nielsen, Garth Watson, Michael Shackleton and Jenny Davis, (2020) Characterisation of the stygofauna and microbial assemblages of the Beetaloo Sub-basin, Northern Territory. GISERA project number: W18. December 2020

⁶ Samuel, G 2020, Independent Review of the EPBC Act—Interim Report, Department of Agriculture, Water and the Environment, Canberra.

The SREBA process mandated by the Pepper Inquiry and encompassing baseline groundwater quality and connectivity testing is at present confined exclusively to the Beetaloo Basin on the assumption that most fracking activity in the NT would occur in this region. However we are seeing the biggest fracking proposal in the NT to date occurring in the McArthur Basin, where no such studies are being undertaken, and existing data is inadequate for the scale of proposed development. We contend that all fracking activity, including exploration, within this basin should be prohibited until a detailed SREBA process has been completed for the region.

Biodiversity Risks:

CAFFA is extremely concerned about Imperial's plans to store wastewater fluid and toxic chemical flowback fluid in open air waste ponds. This practice directly contradicts recommendation 7.12 of the Pepper Inquiry and presents significant risks to biodiversity in the region.

The work done on the birdlife assessment is inadequate. Data deficient systems cannot be relied upon for desktop surveys. This is especially the case where endangered species are concerned, as they are in low numbers anyway. Gouldian finches, grey falcons and crested shrike tits have all been reported in the region in recent times by bird watching groups. It is simply not good enough to rely on desktop and related techniques when dealing with an area where the Pepper Inquiry specifically said more research needed to be done to inform decision making.

The evaporation process means concentrations of chemicals and other pollutants will be increased in the open air ponds. It is impossible to prevent birds from accessing these toxic open air ponds. We do not want to discover that bird species are in the area when their dead bodies are found in an evaporation pond.

Birds, especially honeyeaters and other species, dip bathe and drink on the wing. They would also be able to land on the slope of the liner covered banks. Most bird taxa have a gland at the base of the tail, the uropygial or preen gland. The oil it produces keeps the feathers flexible and assists the interlocking barbules to stay intact, thus forming a barrier that helps repel water and insulate the bird. In the case of waterbirds, preening oil helps them stay afloat, and without it birds may even drown. Chemicals like surfactants can alter the efficacy of waterproofing elements in their feathers, rendering them flightless and vulnerable to predation.

The fencing around freshwater storages and all other water needs to be frog proof, and not just have wildlife ladders installed. Native burrowing frogs are likely to try to access standing water. This highlights one of the risks relating to holding polluted water in open evaporation ponds in that it is likely to attract native species who cannot detect the pollutants. This includes elements like surfactants which are not a human health issue but a massive issue for many non-human species, especially amphibians.

There are many unknowns about this region's biodiversity. This is especially the case with endemic frogs. There is a need to determine the range of the water-holding frog *Litoria platycephala* and to determine whether the species in the McArthur/ Beetaloo area is in fact a different species.

The cane toad *Rhinella marina* is a major threat to a number of animal species, with population level declines documented (Doody 2004, 2006, 2009). Allowing open water storage pits will dramatically increase cane toad numbers in the region with broad biodiversity implications.

Many areas of the NT were originally thought to be too dry for cane toads to colonise but this has been shown to be incorrect. The main reason toads have been able to colonise large areas of semi-arid and arid NT is because of the use of open water storage in the cattle industry. The creation of such spaces for water and wastewater storage will enable cane toads to seek refuge and breed in the area. The local cane toad population would be massively increased if open water pits were introduced.

This is particularly destructive of varanid populations and other reptile species. Introducing standing water bodies into an area will not only cause the cane toad population to increase, but will result in cane toads breeding at the sites. This introduces a size class of cane toads into the area that would not be occurring without the water pits, which in turn causes dramatic declines and even local extinctions of smaller Varanid species and the juvenile stages of the larger Varanid species such as *V.panoptes*, *V.gouldii* and *V.mertensii*.

There are additional issues with the use of chemicals, and this puts the wastewater elements of this plan in a particularly high risk category. Surfactants and many other chemicals are especially toxic for frogs and have implications for other species such as birds. Even if the pits are emptied, there will be residues from waste water present which will most certainly impact wildlife.

Open water storages should be not allowed in line with recommendation 7.12 of the Pepper Inquiry. To allow these pits to be constructed will lead to dramatic and unacceptable changes in biodiversity and create enormous risks that would not be present if enclosed tanks were used.

Climate Implications:

Page 75 of the EMP shows that for the three years of proposed activities, the GHG emissions are approximately 77,500 tCO₂-e per year. Flaring and related activities from a new fossil fuel source are not appropriate when the IPCC is calling for no new fossil fuel deposits to be opened. There is also no information about how these will be offset and how they are compatible with NT government moves towards 2050 emissions targets.

The Fracking Inquiry⁷ estimated that large scale extraction of Beetaloo Basin Gas in the Northern Territory could add 40 million tonnes to Australia's emissions, equivalent to a 7% increase on current levels, plus another 60 million tonnes when it is consumed overseas. The larger cumulative effects of fracking the Beetaloo and McArthur Basins must be considered at each separate application stage, and each application for further drilling must state explicitly how the emissions it generates are going to be offset, to provide confidence that Fracking Inquiry recommendation 9.8: "that the NT and Australian governments seek to ensure that there is no net increase in the life cycle GHG emissions emitted in Australia from any onshore shale gas produced in the NT," is being fulfilled.

⁷ Dr Alan Andersen, Dr Vaughan Beck AM, Prof Brian Priestly, Dr David Ritchie, Dr Ross Smith, Prof Peta Ashworth, Prof Barry Hart AM, Dr David Jones (2018). Final Report of the Scientific Inquiry into Hydraulic Fracturing in the Northern Territory.

The NT government's Climate Change Response document notes that continued greenhouse gas emissions through fossil-fuel intensive industries will drive the following environmental and social impacts in the NT:

- Increased exposure to extreme weather events
- Increase in the number of extreme heat days; the intensity of tropical cyclones; more extreme fire behaviour; flooding; and the intensity and frequency of droughts
- Changes to freshwater availability
- Increased risk to human health and life
- Direct impacts to primary industries (e.g. risks to livestock; fisheries)
- Loss of biodiversity in the Northern Territory
- Natural ecosystems placed at high risk (e.g. extensive mangrove dieback and coral reef loss; loss of freshwater ecosystems; coastal erosion)
- Increase in sea level rise, ocean acidification, and extreme sea-level events

In the same document, the Hon. Eva Lawler, Minister for Climate Change, notes that "Climate change is already having an impact on Territorians' health, our economy, and our natural systems" and that "[a] climate change response is a responsible economic strategy"⁸.

The Minister for Climate Change must live up to her words and take the forces driving climate change and its impacts on the environment, economy, and human health seriously by referring Imperial Oil's proposal, which will clearly exacerbate the impacts mentioned above, for a full environmental impact assessment under section 50 of the Environmental Protection Act.

Imperial Oil's lack of transparency:

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency regarding the technical processes of gas exploration and extraction. We demand that the government halts this outrageous proposal at least until the WOMP is completed and both the public and the Environment Minister have full access to its contents. The WOMP must be submitted in its entirety for assessment by the EPA.

Imperial's EMP must be rejected because its chemical use information is clearly inadequate. Firstly, Imperial's submission does not even provide an analysis of the chemicals to be used by the project as stated on page 2. This is woefully inadequate and the EMP needs to be updated with a real analysis. This is a clear case of a small player cutting corners to suit their timeframes and not doing the process properly.

In addition, we express our strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to

⁸ Northern Territory Climate Change Response, page 4.

advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 for public and ministerial scrutiny.

Conclusion:

Imperial Oil's proposed 2021-2025 works program on EP187 must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment. The EMP clearly breaches the principles of Ecologically Sustainable Development (ESD), which are the guiding principles of NTG policy in relation to such developments. The proposal's contribution to a net increase in GHG emissions in Australia, its risks to biodiversity and inter-aquifer contamination through well casing failure (not a matter of if but when), are consequences that will be suffered by future generations of Territorians and clearly breach the ESD principle of intergenerational equity. These principles must be applied to the review of this EMP.

Open air waste storage ponds pose an unacceptable risk to biodiversity within the region, and must not be allowed. Those at risk include several nationally listed threatened species: *Erythrura gouldiae* (Gouldian Finch) *Ardeotis australis* (Australian bustard) and the *Mesembriomys macrurus* (golden-backed tree rat). Waste ponds will provide breeding grounds for the cane toad *Rhinella marina* and are likely to dramatically increase their numbers, which will in turn lead to population decline in varanid populations and other reptile species.

The risks the project represents to groundwater quality within the McArthur Basin and the difficulties in even assessing its impacts on groundwater quality given the lack of significant baseline water testing in the region, the scale of the proposal in terms of climate pollution, and Imperial Oil's demonstrated unwillingness to submit its proposal for full scrutiny suggest that the Territory and Federal ministers for the environment and Independent Officer Dr David Ritchie must treat this proposal with the utmost of caution.

Sincere regards, Central Australian Frack Free Alliance

Doyle, William – Thursday, 13 May 2021 – 15:14:26

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	William Doyle
Sent	13/05/2021 3:14:26 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

William Doyle

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Marie-Louise Drew

Drinkwater, Fabienne – Tuesday, 11 May 2021 – 12:08:56

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Fabienne Drinkwater
Sent	11/05/2021 12:08:56 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Ray Dunbar

Duncan, Sally – Friday, 14 May 2021 – 01:54:31

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Sally Duncan
Sent	14/05/2021 1:54:31 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

Dunstone, Kelsey – Wednesday, 19 May 2021 – 16:15:02

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Kelsey Dunstone
Sent	19/05/2021 4:15:02 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

People come to our country to appreciate many things, significantly the land and wildlife. Fracking compromises this - quite simple really.

What an utter disappointment to see the PM who should be, and is being begged to, lead the country to renewable energy have such a cop out to justify this new plant.

Your generations may not perhaps feel dramatic effects but mine and those younger/future generations do. Coal miners need to be adapting to renewable energy and supported in that process, if smokers say they don't want their right taken away to smoke we don't continue to subsidize the process and support it, we continue the phase out as much as possible. Let alone \$600 million to build a plant that will reek fossil fuels into the atmosphere and soils, when we have stranded Aussies still abandoned overseas and feeling stateless and unwanted, yet holding a wealth of unappreciated experience and knowledge they want to share with their country.

I have never been so upset with the Liberal party, who I have supported my whole life until the past few years, nor am I impressed with other parties being stereotypical cliches waiting for the other to speak to debate - instead of providing solutions. Farmland should not continue to be developed on until non-viable agricultural land is, and old buildings remodelled - again a simple solution to assist the agri region and protect our land to assist with tourism, quality of life, let alone the obvious slowing on climate change.

Climate change is not a future problem. We are pleading for basic common sense.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

Eaton, Martina – Tuesday, 11 May 2021 – 12:37:14

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Martina Eaton
Sent	11/05/2021 12:37:14 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Martina Eaton

Eckermann, Robin – Tuesday, 11 May 2021 – 15:12:13

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Robin Eckermann
Sent	11/05/2021 3:12:13 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants - and is a poorly conceived venture at this present time in the world's history when climate change is rapidly becoming an existential threat.

Its time for the Government to embrace a clean energy future and redirect its policies to helping Australia become a leader rather than a laggard in the renewable energy field.

I appeal to you on behalf of my children and grandchildren (who will inherit the environment you are shaping) to block this initiative.

Yours sincerely,

Robin Eckermann AM

Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Jim/Margaret Edwards/Seydel

Eeuwen, Anja – Tuesday, 11 May 2021 – 13:22:16

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Anja Van Eeuwen
Sent	11/05/2021 1:22:16 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Ettinger, Sascha – Wednesday, 12 May 2021 – 07:34:07

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Sascha Ettinger
Sent	12/05/2021 7:34:07 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Evans, Bernadette – Tuesday, 11 May 2021 – 12:55:57

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Bernadette Evans
Sent	11/05/2021 12:55:57 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Bernadette Evans

Evans, Jennifer – Tuesday, 11 May 2021 – 18:04:25

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jennifer Evans
Sent	11/05/2021 6:04:25 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

Clean potable water is not given the protections that should be in place across the whole country and we have seen in other areas the impact fossil fuel extraction and inappropriate land use is having on the environment.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

Ewan, James – Wednesday, 12 May 2021 – 09:00:49

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	James Ewan
Sent	12/05/2021 9:00:49 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

James Ewan

Extonpery, Lulu – Tuesday, 11 May 2021 – 15:15:58

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Lulu Extonpery
Sent	11/05/2021 3:15:58 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Falardeau, L. – Thursday, 13 May 2021 – 12:55:03

Subject	Objection to Imperial 2021-2025 EP187 Work Program EMP
From	L. Falardeau
Sent	13/05/2021 12:55:03 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I have been made aware today of an Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

I understand this to be a proposal for seven new fracking wells in the Northern Territory. Fracking is known to have significant environmental impacts. I am concerned that this fracking program is not receiving the regulatory scrutiny it warrants.

I understand the project as follows:

1) The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

Environmental impact:

1) In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. There is a risk that this will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

2) Imperial is proposing to frack just 1.1km from a water bore. I understand this to be the minimum set back distance permitted. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination. I'm very concerned about impacts on groundwater quality. Groundwater baseline testing and studies of aquifer connectivity must be completed.

3) A recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer. These new stygofauna species are crucial to keeping water clean and usable for us all. This should trigger a halt to all fracking activity. Fracking activities may put these species and groundwater at risk.

4) The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Additional risks

1) Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP).

2) The WOMP has not been completed and I understand the Plan will not be released to the public nor the Environment Minister. If true, this secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet essential details of its proposed operations in EP187 has not been released to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Regards,

L. Falardeau

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Julia Famlonga
Sent	11/05/2021 9:56:53 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts.

I am concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process.

This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes seven fracking wells and six new well pads.

Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites.

Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks.

Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing.

This clearing is not confined to a single area, but will scar a significant stretch of country.

This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore.

This is the minimum set back distance permitted, and does not leave much room for error.

The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I am very concerned about impacts on groundwater quality.

The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity.

Groundwater baseline testing and studies of aquifer connectivity must be completed.

These new stygofauna species are crucial to keeping water clean and usable for us all.

Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season.

The adverse economic impacts and road safety issues have not been properly considered.

There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season.

Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk.

The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park.

There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, ie what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure, are only detailed in the Well Operations Management Plan (WOMP).

The WOMP has not even been completed and the Plan will not be released to the public nor the Environment Minister.

This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/Empire Energy to advance the proposed Work Program for EP187.

Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ian FARRELL
Sent	14/05/2021 6:23:14 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Ian FARRELL

Farrimond, D. – Tuesday, 11 May 2021 – 16:38:47

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	D. Farrimond
Sent	11/05/2021 4:38:47 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

D. Farrimond
