The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Matilde Fedi

Fenwick, Elizabeth – Tuesday, 18 May 2021 – 19:32:19

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Elizabeth Fenwick
Sent	18/05/2021 7:32:19 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Figueiredo, John – Wednesday, 12 May 2021 – 11:04:36

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	John De Figueiredo
Sent	12/05/2021 11:04:36 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I did not compose this email, but I have read it thoroughly and I agree with what has been said. Gas is a fossil fuel. The planet cannot afford any new fossil fuel developments if it is to remain suitable for human habitation. There is no Planet B. Perhaps you should think of your children and future generations.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Robert Fisher

Fisher, Steb – Tuesday, 11 May 2021 – 15:28:39

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Steb Fisher
Sent	11/05/2021 3:28:39 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Lani Florance

Florance, Mitchell – Wednesday, 19 May 2021 – 13:03:20

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Mitchell Florance
Sent	19/05/2021 1:03:20 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

Follis, Robert – Tuesday, 11 May 2021 – 12:25:06

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Robert Follis
Sent	11/05/2021 12:25:06 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

The risks to the groundwater are just unacceptable as is the lack of a serious environmental management plan.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Robert Follis

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Helen Forbes

Ford, Paul – Tuesday, 11 May 2021 – 15:02:48

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Paul Ford
Sent	11/05/2021 3:02:48 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

That Empire Energy is proposing its fracking activity take place before critical baseline groundwater studies are complete is an Environmental Disaster Waiting To Happen. It displays complete contempt for Environmental Regulations and an unequivocal disregard for the consequences of operational contamination on

essential underground water systems.

The probability of "fracking operations" toxically impacting underground water system pathways that currently feed lush woodland savannah and biologically rich creeks places yet again more unique Australian ecology(plant and animal species and their environment) at serious risk of extinction.

That none of this gas is necessary to be produced given Global Warming and Climate Change Action that needs to be taken immediately, any government sponsorship/subsidy is grossly irresponsible and unconscionably negligent of the Government's responsibility to help meet global targets to reduce carbon emissions.

Worse still, this gas is more than likely to be sent for even greater plastic production,when the World, in many locations on the planet, is drowning in a sea of plastic waste, all while the recycling of old plastic is into new plastic. Yet more plastic, that is already part of the food chain contaminating every living things food supply. What will be the future consequences of prolonged consumption of plastic on the living things of this planet?

The regulations to protect the Environment are meant to ensure precious water supplies in remote areas dependent on underground water resources are kept safe. There are no other sources of water for people and other life forms in the area to utilise. To steal away this water in a toxic process that permanently contaminates precious water and destroys its means of distribution through underground systems is a senseless act of violence against the Environment that currently sustains life for a few transitory dollars that leave a wasteland in their wake. Poisoning water for a few dollars profit, and destroying underground water pathways that feed other environments, UNCONSCIONABLE!

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Forrest, Meri – Friday, 14 May 2021 – 20:52:43

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Meri Forrest
Sent	14/05/2021 8:52:43 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Meri Forrest

Forster, Jenny – Tuesday, 11 May 2021 – 17:55:17

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jenny Forster
Sent	11/05/2021 5:55:17 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Angus Fraser
Sent	19/05/2021 10:39:53 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Angus Fraser

Freedman, Charlie – Tuesday, 11 May 2021 – 16:34:04

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Charlie Freedman
Sent	11/05/2021 4:34:04 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Amelia Gabbiani

Gallagher, Gallagher – Tuesday, 11 May 2021 – 18:17:06

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Gallagher Gallagher
Sent	11/05/2021 6:17:06 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Gartland, Georgina – Wednesday, 12 May 2021 – 11:21:26

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Georgina Gartland
Sent	12/05/2021 11:21:26 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

There are many concerns within this and it is also important to know that First Nations Peoples of this region have not provided their consent; they reject exploration and fracking as it will damage their Sacred lands, songlines and waterways. There is No consent

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Gatfield, Linda – Tuesday, 11 May 2021 – 16:52:50

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Linda Gatfield
Sent	11/05/2021 4:52:50 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I strongly object to the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

The proposed seven new fracking wells in the Northern Territory will have significant combined environmental impacts and needs strong regulatory scrutiny.

The scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are

only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Sent	14/05/2021 6:24:21 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Robyne Gaultier

Giacon, Maria – Sunday, 16 May 2021 – 08:58:07

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Maria Giacon
Sent	16/05/2021 8:58:07 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
ria giacon

Gill, Cathy – Monday, 17 May 2021 – 11:22:42

Subject	Imperial 2021-2025 EP187 Work Program EMP must not go ahead.
From	Cathy Gill
Sent	17/05/2021 11:22:42 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

Please read the below detailed overview of concerns held by all who have investigated the many unacceptable risks of this proposal. We beg the minister to consider long term effects to the environment and to consider the lives of people depending on a clean environment.

Too often we have seen the final abandonment of projects leaving damage that lingers for many generations.

with this in mind, I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Greg Gill

Gill, Ian – Tuesday, 11 May 2021 – 11:53:06

Subject	Extremely strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ian Gill
Sent	11/05/2021 11:53:06 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Jacqueline Glyde

Godoroja-Prieckaerts, Zoya – Thursday, 13 May 2021 – 10:55:09

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Zoya Godoroja-Prieckaerts
Sent	13/05/2021 10:55:09 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Nicky Gordon

Gormagn, Phil – Tuesday, 11 May 2021 – 16:42:05

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Phil Gormagn
Sent	11/05/2021 4:42:05 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Mark Gradwell

Grant, Gordon – Wednesday, 19 May 2021 – 17:41:09

Subject	I object strongly to Imperial 2021-2025 EP187 Work Program EMP
From	Gordon Grant
Sent	19/05/2021 5:41:09 PM

Whilst most of this email is the prepared form letter I do wish to emphasise that the environmental vandalism of this project is severe and should rule it out. Apart from the severe damage to the surface, methane is a far worse greenhouse gas than CO2 and we should be leaving it in the ground to avoid the worst impacts of climate change.

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Rhonda Green
Sent	12/05/2021 4:40:44 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Rhonda Green

Gugler, Ann – Tuesday, 11 May 2021 – 12:02:45

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ann Gugler
Sent	11/05/2021 12:02:45 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Ann Gugler

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Lois Hamlin
Sent	11/05/2021 12:27:18 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Lois Hamlin

Hansberry, Beris – Wednesday, 12 May 2021 – 09:09:28

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Beris Hansberry
Sent	12/05/2021 9:09:28 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

Fracking should be classed as an environmental hazard and not allowed to proceed in any part of Australia , let alone near any water courses due to the inevitable risk of contamination.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Beris Hansberry

Hardy-Holden, Judy – Tuesday, 11 May 2021 – 14:38:26

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Judy Hardy-Holden
Sent	11/05/2021 2:38:26 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

Trust in governments is at a very low ebb and it is situations like the Environmental Management Plan submitted by Imperial Oil and Gas that further reduce the trust in the integrity of governmental processes.

Where is the public scrutiny of this project? Do the people directly impacted by this project have a say in the detrimental effects fracking will have on their regions? What are the credentials of this company and what is their history of adhering to environmental constraints? Who will assess the environmental impacts without fear or favour?

With so many questions, and many others, unanswered I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry

season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Judy Hardy-Holden

Harker, Jennifer – Tuesday, 11 May 2021 – 13:22:25

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jennifer Harker
Sent	11/05/2021 1:22:25 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

HARRIS, EVAN – Tuesday, 11 May 2021 – 19:57:03

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	EVAN HARRIS
Sent	11/05/2021 7:57:03 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

I worked for nearly 7 years at Milingimbi and Ramingining, with responsibility to support language and self management amongst the Gupapungu, Djambarrpuyngu and Ganalbingu people.

With continued contact with landowners over years, I am horrified to read that the NT Government wishes to exploit gas in the NT. Of all the states, aboriginal sovereignty will be best served in the NT recognising the sovereign owners and elders of Arnhem Land. Any exploitation of natural resources must be on the initiative and for the benefit of the traditional aboriginal nations.

The latest information on gas exploitation makes it clear that net benefit for the land cannot be achieved given the level of risk, the net benefits, and the prior task of supporting the people in their own aspirations for development. Gas exploration by u the NT government or private capital is totally inappropriate and unacceptable.

Reverend E B Harris,

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travelers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

EVAN HARRIS BA (Hons) MA (Min) (Melb) Grad Dip and sessional coursework , SIL Linguistics.

Harris, Paul – Tuesday, 11 May 2021 – 16:48:45

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Paul Harris
Sent	11/05/2021 4:48:45 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

In fact I believe ANY new Fossil Fuel Project is a contravention of the Paris Accord!

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Harvey, Susan – Tuesday, 11 May 2021 – 13:19:45

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Susan Harvey
Sent	11/05/2021 1:19:45 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Susan Harvey

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Clayre Hawker
Sent	12/05/2021 9:59:37 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Clayre Hawker

Hay, David – Wednesday, 19 May 2021 – 11:52:22

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	David Hay
Sent	19/05/2021 11:52:22 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

David Hay

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment. No shortcuts!

Yours sincerely,

Alan Hayward

HAYWOOD, CAROLYN – Wednesday, 12 May 2021 –
09:07:38

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	CAROLYN HAYWOOD
Sent	12/05/2021 9:07:38 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Nic Hempel

Henderson, Emma – Tuesday, 11 May 2021 – 12:47:45

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Emma Henderson
Sent	11/05/2021 12:47:45 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Matilda Heselev

Hewitt, Andrew – Monday, 17 May 2021 – 15:54:49

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Andrew Hewitt
Sent	17/05/2021 3:54:49 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Matthew Hilderf

Hocking, Bruce – Wednesday, 12 May 2021 – 07:44:43

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Bruce Hocking
Sent	12/05/2021 7:44:43 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Bruce Hocking

Holland, Maggie – Tuesday, 11 May 2021 – 13:39:19

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Maggie Holland
Sent	11/05/2021 1:39:19 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Maggie Holland

Hope, Melissa – Wednesday, 19 May 2021 – 21:15:26

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Melissa Hope
Sent	19/05/2021 9:15:26 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Melissa Hope

Hopkins, Joy – Tuesday, 11 May 2021 – 16:12:48

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Joy Hopkins
Sent	11/05/2021 4:12:48 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Lana Howitt

Hoyle, Cheryl – Wednesday, 12 May 2021 – 14:12:20

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Cheryl Hoyle
Sent	12/05/2021 2:12:20 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am emailing you to express my very deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

Hughes, K – Tuesday, 11 May 2021 – 13:30:26

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	K John Hughes
Sent	11/05/2021 1:30:26 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks. DESTRUCTION OF THE GROUND COVER AND LONG TERM VEGETATION IN FRAGILE AREAS NEEDS TO BE STOPPED.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. ERRORS DO HAPPEN IN THIS RUSH TO GET THESE WELLS. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into

Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project **MUST BE SUBJECT** to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
K John Hughes

Hugo, – Tuesday, 11 May 2021 – 14:05:57

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Christine Hugo
Sent	11/05/2021 2:05:57 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Judith Hummerston

Sent	11/05/2021 2:59:17 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Helene Hutson

Inder-Smith, Rob – Wednesday, 12 May 2021 – 15:46:22

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Rob Inder-Smith
Sent	12/05/2021 3:46:22 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Rob Inder-Smith

Isis, Bindi – Wednesday, 19 May 2021 – 10:06:30

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Bindi Isis
Sent	19/05/2021 10:06:30 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Bindi Isis

Jablonka, John – Tuesday, 11 May 2021 – 12:36:43

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	John Jablonka
Sent	11/05/2021 12:36:43 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

John Jablonka

Jacob, Rosemary – Tuesday, 11 May 2021 – 13:31:26

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Rosemary Jacob
Sent	11/05/2021 1:31:26 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

I have lived in the NT as an adult for 50 years and have seen so much of our resources squandered. I am totally opposed to any actions to develop and use any fossil fuels, give the abundance of natural energy available in Australia, and in the NT in particular.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk.

The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Jarvis, Narelle – Tuesday, 11 May 2021 – 14:30:52

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Narelle Jarvis
Sent	11/05/2021 2:30:52 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Narelle Jarvis

Jau, Jennifer – Monday, 17 May 2021 – 13:29:18

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jennifer Jau
Sent	17/05/2021 1:29:18 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Subject	Very strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Bruce Jensen
Sent	11/05/2021 12:12:31 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Jimenez, Barbara – Friday, 14 May 2021 – 09:21:02

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Barbara Oliver Jimenez
Sent	14/05/2021 9:21:02 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

Johansen, Chris – Tuesday, 11 May 2021 – 13:58:47

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Chris Johansen
Sent	11/05/2021 1:58:47 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

But most importantly of all, the science tells us that any further expansion of fossil fuel extraction is a nail in the coffin of the planet as we know it.

Yours sincerely,

Chris Johansen

Johnson, Arla – Tuesday, 11 May 2021 – 14:04:16

Subject	ALL THE DAMAGE OF SHALE GAS FRACKING MY Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Arla Johnson
Sent	11/05/2021 2:04:16 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am horrified that you should unleash shale gas fracking, with all it's chemical hazards above and below ground, on the community in the NT.

We don't want a gas-led recovery, no matter how much the shale gas frackers want to pollute our groundwater and ruin air quality in this region.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Johnson, Harry – Wednesday, 12 May 2021 – 07:40:38

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP. We all need clean water, water that is safe to drink for ever!
From	Harry Johnson
Sent	12/05/2021 7:40:38 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am an 78 year old grandfather and today I can no longer guarantee that the air today's trusting very young children breathe is safe to breathe anywhere in the world. A very tragic and worrying situation because clean air, like clean water is one of our 4 essential needs.

Under the watch of we adults who can vote for the protection of our 4 vital needs, we can no longer guarantee air is safe to breathe and now the N T government is hell-bent on an experiment that could absolutely damage water, our precious groundwater both used for drinking and for food production.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

Fracking for any fossil fuel or any additional new use of fossil fuel resources is now a very questionable endeavour. Now most of the developed world have accepted that global heating must be adequately addressed now by quickly reducing the world's fossil fuel dependence and increasing its use of renewables. What level of tariffs will be placed Australian exports that contain high fossil fuel inputs?

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Breathe safely and all the best in the future you choose for those you cherish, especially those who are still too young to vote for their vastly changed future world.

Yours sincerely,

harry johnson

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Steve Johnson
Sent	11/05/2021 12:06:11 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Steve Johnson

Johnson, Wendy – Tuesday, 11 May 2021 – 12:05:20

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Wendy Johnson
Sent	11/05/2021 12:05:20 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Wendy Johnson

Johnston, Bronwyn – Friday, 14 May 2021 – 12:04:53

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Bronwyn Johnston
Sent	14/05/2021 12:04:53 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

Please note my objection to any fracking or proposed fracking projects in any state or territory. I am concerned about the recently submitted Environmental Management Plan (EMP) by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant in a detrimental manner. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Johnston, Les – Wednesday, 19 May 2021 – 09:17:45

Subject	Objection to Imperial 2021-2025 EP187 Work Program Environmental Management Plan
From	Les Johnston
Sent	19/05/2021 9:17:45 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I write as an environmental regulatory professional and do not support this activity based on the content of the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells will have a very large environmental impact both during construction and operation. The environmental risks not satisfactorily addressed in the EMP include: rain events, cyclones; waste management and residuals; surface and groundwater impacts from spills, leakage of gas; and regulatory systems for detection of environmental harm.

The interaction between Territory and Federal Government regulation requires more detailed investigation to ensure transparency and appropriate accountability. The project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The waste management details in the EMP suggest that the proponent may decide to include more waste transfer pipelines to move wastes around from one site to another. Pipeline construction can have significant short and long term impacts. The proponent has not identified the details of what pipelines will be constructed and where they will be located. Just how tracking of pipeline transferred wastes will be applied is not stated.

The details provided for waste management propose a simplistic approach using trucking of the wastes to a licenced facility for disposal. No analysis is provided of the classification of each waste and whether a licenced treatment facility exists. No analysis is provided on in situ treatment activities. The EMP also proposes to reduce waste volumes without defining how this will be completed. Management of wastes is too complex to be left to see what happens. The EMP needs to provide sufficient information that the management of waste is specific to ensure that wastes do not end up causing water pollution or be left on site causing a legacy issue for the land owner.

The management of wastes is also tied to predicted weather and rainfall events. Given climate change, past rain events must be used with caution. The 1.1m free-board proposed may be insufficient for open storages. The use of open storages and reliance on evaporation for volume reduction is questionable in the face of more intense and longer rain events. Flooding like that recently in North Queensland must be addressed in this EMP not left unassessed because it is seen as being unlikely.

Experience has shown that groundwater bores do get polluted from fracking activities. Even if drilling is performed using a specific management plan, such plans do not prevent groundwater pollution. The risk of groundwater pollution remains and is passed on the future generations.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

The fracking of shale gas at other sites has not been able to show leakage of gas does not occur. Although gas monitoring is proposed, that simply identifies the issue. The only way to prevent gas leakage is to not use the current methods for extraction of the gas.

Experience with the regulation of underground gas has revealed serious regulatory issues with information being given to environmental regulators at the time an incident takes place. Remote sites away from the public eye and lack of unannounced regulatory inspections, give operators the opportunity to cleanup pollution prior to detection. The attitude of the industry towards regulation is unhelpful to build public trust.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Les Johnston

Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Caroline Jones

Jones, Chris – Tuesday, 11 May 2021 – 11:59:59

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Chris Jones
Sent	11/05/2021 11:59:59 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). Jones, Jennifer – Friday, 14 May 2021 – 08:54:35

Subject	Objection to Imperial EP187 Work Program EMP
From	Jennifer Jones
Sent	14/05/2021 8:54:35 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my concern about the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

The proposal for seven new fracking wells in the Northern Territory will have significant environmental impact. I question if this fracking program is receiving the regulatory scrutiny required.

The project should be assessed at the Federal level, with detailed involvement of the NT EPA, and should involve a full environmental impact assessment.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country.

Imperial is proposing to frack just 1.1km from a water bore, the minimum set back distance permitted. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination. This raises serious concerns about impacts on groundwater quality. Groundwater baseline testing and studies of aquifer connectivity must be completed.

The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk.

The Well Operations Management Plan (WOMP) has not been completed and even when completed will not be released to the public nor the Environment Minister. The secrecy regarding the details of well construction and operation is a clear breach of the Pepper Inquiry's call for transparency.

Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

I am strongly opposed to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187.

Jones, Nicole – Tuesday, 18 May 2021 – 20:59:00

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Nicole Jones
Sent	18/05/2021 8:59:00 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Nicole Jones

Jones, Rhys – Tuesday, 11 May 2021 – 12:23:54

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Rhys Jones
Sent	11/05/2021 12:23:54 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Rhys Jones

Joy, Jennifer – Tuesday, 11 May 2021 – 12:42:51

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jennifer Joy
Sent	11/05/2021 12:42:51 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I have a solid understanding of the negative impacts on both the environment and communities where fracking has been allowed to take place in the past (when we were both ignorant and arrogant about the impacts). It is hard to comprehend that proposals such as this are still being considered in light of the overwhelming evidence against such endeavours, but I realise that we still have a long way to go yet when it comes to common sense prevailing, especially when backed by science and the lived experiences of people others than those who receive a financial or political short-term benefit.

Therefore, I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

I fully endorse the letter below.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant

movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Jennifer Jungheim

K, Melisa – Tuesday, 11 May 2021 – 12:57:35

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Melisa K
Sent	11/05/2021 12:57:35 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Kammoora, Donna – Wednesday, 12 May 2021 – 08:44:50

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Donna Kammoora
Sent	12/05/2021 8:44:50 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

I have connection with the people of this country through powerful song and dance partnerships. I am namarra. This is a beautiful powerful country whose water courses connect and feed the eastern Australia down into the Diamantina River systems and into SA. Water is so very precious and it's good health is our responsibility and the responsibility for good governance. Fracking this country will have fatal consequences for life across vast areas of country.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Rodion Kashubin

Kaulfuss, Cheryl – Tuesday, 11 May 2021 – 19:41:32

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Cheryl Kaulfuss
Sent	11/05/2021 7:41:32 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Joy Kelly

Kent, Robert – Tuesday, 11 May 2021 – 17:35:21

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Robert Kent
Sent	11/05/2021 5:35:21 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Robert Kent

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

dawn kenyon

KILLIAN, NICHOLAS – Monday, 17 May 2021 – 13:48:21

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	NICHOLAS KILLIAN
Sent	17/05/2021 1:48:21 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Kilpatrick, Leigh – Tuesday, 11 May 2021 – 14:11:14

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Leigh Kilpatrick
Sent	11/05/2021 2:11:14 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny. We elected you to govern wisely and supporting this proposal is most definitely not in the best interests of the people or country you represent.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Leigh Kilpatrick

Kingcott, Loris – Thursday, 13 May 2021 – 07:43:03

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Loris Kingcott
Sent	13/05/2021 7:43:03 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Loris Kingcott

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Anthony Klein

Kleiner, Jill – Wednesday, 19 May 2021 – 12:13:24

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Jill Kleiner
Sent	19/05/2021 12:13:24 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Jill Kleiner

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Margaret Klucis
Sent	11/05/2021 1:54:45 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

Fracking is destroying the earth and nature is sending us a message to respect the planet we live on. Hence we have messages from nature about global warming - about not destroying the atmosphere of our planet - referenced by all the clamorous events that modern information communications show us.

RESPECT THE EARTH AND NATURE BEFORE IT IS TOO LATE

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Robin Knox

Kobs, Alex – Tuesday, 11 May 2021 – 21:07:22

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Alex Kobs
Sent	11/05/2021 9:07:22 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Hans Koch
Sent	11/05/2021 1:34:33 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

yes, I use the pre-written Text, but this is only because I could not put my concerns for FRACKING in better words!

Please don't let companies wreck our Country for short term gain!

It will cost much more, to fix the problems caused, after the damage has been done.

It destroys the Landscape, it poisons Nature, it destroys the basic requirement's for our Plant and Animal, including Human beings, existence!

If those fracking companies would put their effort in creating technology for renewables, they could actually do good things instead!

Please do not allow them to destroy our surviving basics anymore!

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Jason Koth

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Karen Kuhl
Sent	11/05/2021 12:39:24 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Karen Kuhl

Laidlaw, Sam – Wednesday, 19 May 2021 – 15:56:10

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Sam Laidlaw
Sent	19/05/2021 3:56:10 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Sam Laidlaw

This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Richard Langham

Lantman, Luke – Tuesday, 11 May 2021 – 19:11:11

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Luke Lantman
Sent	11/05/2021 7:11:11 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Luke Lantman

Laws, Kerry – Monday, 17 May 2021 – 10:05:48

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Kerry Laws
Sent	17/05/2021 10:05:48 AM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Kerry Laws

LAZDOVSKIS, Ebonie – Wednesday, 19 May 2021 – 12:56:13

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ebonie LAZDOVSKIS
Sent	19/05/2021 12:56:13 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Ebonie LAZDOVSKIS

Leahy, Kath – Tuesday, 11 May 2021 – 15:59:02

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Kath Leahy
Sent	11/05/2021 3:59:02 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

Now is absolutely NOT the time to frack nor to mine fossil fuels! Have you no children or grandkids? At the present rate of emissions we will be at 3 degrees by century's end. I have skin in the game as my son and his kids will inherit an unstable, diminished habitat if we do not change our ways.

Make no mistake, there will be other consequences for individuals and nations that wilfully ignore the Science: Sanctions, collapsed economies, stranded assets, extreme weather events, possible criminal charges, loss of geopolitical and strategic status, to name but a few.

I am outraged that this company would receive millions in subsidy. Please, please vote this down.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

Leahy, Ruth – Tuesday, 18 May 2021 – 13:43:09

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Ruth Leahy
Sent	18/05/2021 1:43:09 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I could reword this template Objection Submission organised by Lock the Gate. But I don't see the point. Lock the Gate and their advisers are experts with regard to the detrimental effects of Fracking. I trust them.

However, I will add my personal comment. As regards the Traditional Owners of the country around Borroloola - Beetaloo Basin that is planned to be fracked and funded with taxpayers' money from NAIF. It is an abuse of Traditional Owners to destroy their country and culture. These people fought for decades for their Land Rights on what has always been their Never Ceded Sovereign country. Not Frackers' country. Not Northern Territory or Federal Governments' country. The Gunner Government lied in the previous NT Election that it would not frack, a policy it was elected on. Then reneged on its public promise. When First Nations Traditional Owners protested about Fracking of their country by digging up a small section of NT Parliament lawn, they were charged for Criminal Offence. Yet Frackers and Governments believe they can do whatever they want with their country. I suggest the "criminals" here are those, on the wrong side of history, who want to insist on unwarranted Fracking of First Nations' country, who choose to indulge in what amounts to modern day Invasion Wars.

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

Lee, Chris – Tuesday, 11 May 2021 – 12:12:11

Subject	Strong objection to Imperial 2021-2025 EP187 Work Program EMP
From	Chris Lee
Sent	11/05/2021 12:12:11 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

As a civil engineer with extensive experience in the oil and gas industries, I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Chris Lee

Lee, Robyn – Tuesday, 11 May 2021 – 15:17:10

Subject	Please do not let Empire Energy frack, destroy land and pollute water !
From	Robyn Lee
Sent	11/05/2021 3:17:10 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,

Robyn Le

Sent	11/05/2021 12:42:07 PM

Dear Hon Minister Lawler, Hon Minister Sussan Ley, and Independent Officer Dr David Ritchie,

I am writing to express my deep concern regarding the Environmental Management Plan (EMP) submitted by Imperial Oil and Gas/ Empire Energy for clearing and fracking activity on Exploration Permit 187.

This proposal for seven new fracking wells in the Northern Territory will have significant combined environmental impacts. I'm concerned this fracking program is not receiving the regulatory scrutiny it warrants.

I believe the scale of this project is beyond the scope of the NT EMP process. This project should be assessed at the Federal level, plus with the detailed involvement of the NT EPA through a full environmental impact assessment.

The proposal includes 7 fracking wells and 6 new well pads. Fracking wells will be connected by a grid of roads and flow lines - pipelines carrying polluted waste fluid between frack sites. Well pads will be cleared, seismic lines cut across dry savannah woodland and traversing creeks. Pipelines and tracks will be constructed beside and over creeks.

In total, the proposal includes 150 hectares of land clearing. This clearing is not confined to a single area, but will scar a significant stretch of country. This will increase predation from feral animals and cause inundation by invasive species, which typically favour areas of disturbance.

Imperial is proposing to frack just 1.1km from a water bore. This is the minimum set back distance permitted, and does not leave much room for error. The Pepper Inquiry found that fracking within a kilometre of water bores poses an unacceptable risk of water contamination.

I'm very concerned about impacts on groundwater quality. The recent discovery of at least 11 new stygofauna species in the Cambrian Limestone Aquifer should trigger a halt to all fracking activity. Groundwater baseline testing and studies of aquifer connectivity must be completed. These new stygofauna species are crucial to keeping water clean and usable for us all. Fracking activities may put these species and groundwater at risk.

This fracking work schedule coincides with peak tourism season. The adverse economic impacts and road safety issues have not been properly considered. There are significant movements of holiday makers and cattle trucks along the Carpentaria Highway during the dry season. Increased traffic from the fracking fields, including heavy and oversized vehicles, puts other travellers at risk.

The transport of chemicals, radioactive mud and fracking waste fluids via pipelines and trucks and their storage in open treatment tanks in a cyclone pathway presents a contamination risk. The proposed works area is in close proximity to the Limmen Bight River, which flows into Limmen Bight Marine National Park. There is a risk of fluids spilt during storage and transport flowing into the Limmen Bight.

Many of the essential details regarding well integrity, i.e. what the wells will be made of, and what steps Empire Energy would take to mitigate the risk of well degradation or failure are only detailed in the Well Operations Management Plan (WOMP). The WOMP hasn't even been completed and the Plan will not be released to the public nor the Environment Minister. This secrecy regarding the details of well construction and operation is dangerous and a clear breach of the Pepper Inquiry's call for transparency.

Finally, I express my strong opposition to any Territory or Federal government funding being issued to Imperial/ Empire Energy to advance the proposed Work Program for EP187. Empire Energy is seeking government financial support through the Beetaloo Cooperative Drilling Program to advance this works program, yet has not shown good faith in releasing essential details of its proposed operations in EP187 to public scrutiny.

This fracking project must be subject to the full Federal assessment process and a Territory Environmental Impact Assessment.

Yours sincerely,
Jennifer Lehmann
