

## Holtze enabling infrastructure

Dear stakeholder,

The Northern Territory Government (NTG) is undertaking investigative works from January onwards, including survey and geotechnical investigation activities to inform the design for part B of the Holtze Development Area.

You may see workers and machinery on site during these investigations, however minimal to no impact is expected. Access to private property will not be required for the works.

NTG is planning enabling and public infrastructure for the Holtze Development Area (near Palmerston Regional Hospital) to ready Crown land for future development.

Part A works are in construction, and part B works are currently in the design phase.

Part B includes:

- further extension of Linco Road
- drainage infrastructure
- underground sewer, water and power services (behind properties on Taylor Road in Holtze)
- underground sewer (behind properties on Inverway Circuit, Watson Court and Riveren Court in Farrar)
- connecting services into existing networks.

The location of part A and B works is shown on the map overleaf.
